Advanced Technology Demonstrator (ATD) Radar Back End Improvements and Engineering Test Support

This is a notice of intent to award a noncompetitive contract action. The National Oceanic and Atmospheric Administration (NOAA), Acquisition and Grants Office (AGO), Western Acquisition Division (WAD), Ocean and Atmospheric Research (OAR) and National Severe Storms Laboratory (NSSL) intend to award a noncompetitive contract action for Advanced Technology Demonstrator (ATD) Radar Back End Improvements and Engineering Test Support Services.

(1) Point of Contact:

Contract Specialist: Heidi Washburn
Email: Heidi.washburn@noaa.gov
Contracting Officer: Remo Dela Cruz
Email: remo.dela-cruz@noaa.gov

(2) Contracting Office Address: 325 Broadway, Boulder, CO 80305
(3) Set-aside: Not applicable. The Government does not intend to set-aside this procurement for a small business program.
(4) North American Industry Classification System Code: 541330 - Engineering Services
(5) Product Service Code: R425 – Support - Professional: Engineering/Technical
(6) Intended Source: General Dynamics Mission Systems, UEI: LDUJLC79HNK5
(7) Description:

The Government requires continued technical and engineering support for on-going improvements and addressing obsolescence within NSSL's ATD radar as part of its Phased Array Radar (PAR) research program. The PAR research program plays a critical role in supporting NOAA's mission to enhance the quality, coverage and accuracy of severe weather warning systems. Specifically, the ATD radar plays a central role in evaluating and developing cutting-edge PAR technology to improve weather detection and forecasting capabilities. This acquisition is essential in providing ATD back-end technical and engineering support for the continued sustainment and development of the ATD radar. The requirement includes research, design and implementation of system improvements; continued system development; and operational support and sustainment of the ATD system. The services required under this acquisition are anticipated to be performed at the NSSL site located in Norman, Oklahoma.

The anticipated period of performance for this requirement is May 2026 – May 2031, with five, one-year ordering periods.

NOAA intends to award a sole-source contract to General Dynamics Mission Systems (GDMS) under the authority of 41 U.S.C. 3304(a)(1), use of noncompetitive procedures implemented by FAR 6.103-1.

The intended source for this requirement is GDMS. GDMS played a foundational role as a primary developer and architect under the joint Federal Aviation Administration and NOAA Multi-Function PAR program. GDMS possesses the institutional knowledge and technical expertise of the PAR program. Because this requirement involves critical enhancements to proprietary equipment and source code originally designed by GDMS, no other source can satisfy the government's needs without causing unacceptable risks and delays to the NSSL mission. As a result, GDMS remains the only known source with the comprehensive experience required to ensure the successful continued development and sustainment of this specialized system.

This notice of intent is not a request for competitive proposals. However, any firm that believes it can meet this requirement may provide written notification to the Contracting Officer. Firms who believe they can meet this requirement are required to submit in writing an affirmative response demonstrating a comprehensive understanding of the requirements. All written responses must include proof of possessing permits and a written narrative statement of capability, including detailed technical information demonstrating their ability to meet the requirement. A determination by the Government not to compete this requirement based upon responses to this notice is solely within its discretion. Affirmative written responses must be received no later than the due date and time of this notice. Information received will normally be considered solely for the purpose of determining whether to conduct a competitive procurement.
