NOAA/NATIONAL MARINE FISHERIES SERVICE
SOUTHWEST FISHERIES SCIENCE CENTER/O&M DIVISION
AQUARIA AND TECH TANK SEAWATER

Performance Work Statement

Performance Period: September 14, 2026- September 13, 2027

I. Introduction

The NOAA / Southwest Fisheries Science Center requires continuous seawater flow supplied from the University of California at San Diego's (UCSD) Scripps Institution of Oceanography (SIO).

II. Background

The UCSD Regents has been providing continuous seawater to the SWFSC for over five decades for the experimental aquarium and newly built technology tank. The SWFSC La Jolla Laboratory is located on the campus of SIO, which is part of the University of California system, governed by the UC Regents. NOAA and the UC Regents signed the Ground Lease for the land on which the laboratory was built in June 2009. The Ground Lease further specifies that NOAA will pay the UC Regents for seawater usage.

III. Description of Work and Services

Requirement is to provide a continuous flow of seawater to the La Jolla Laboratory. Seawater will be pumped from the intake at the end of the Scripps Institution of Oceanography (SIO) Pier, flow through the SWFSC experimental aquarium, and returned to the ocean via SIO's seawater outfall. All piping, valves, pumps and associated equipment are owned and maintained by SIO, with the exception of equipment on the premises of the SWFSC La Jolla Laboratory. Contract will be for the cost of operations and maintenance of the SIO sweater system based on an expected usage rate of continuous seawater delivered at a rate of 80 gallons per minute. Units = 100 gallons delivered (80 gallons per minute = 42,048,000 gallons per year = 420,480 hundred gallon units per year). Period of performance will be September 14, 2026 to September 13, 2027. This will allow the SWFSC to accomplish its mission of conducting research on the conservation and management of living marine resources.

IV. Deliverables

1. Provide continuous seawater flow to the SWFSC La Jolla Laboratory.

V. Period of Performance: 9/14/2026-9/13/2027
