Scope of Work

Systems Furniture Development, Demolition, Reuse & Installation

Client: Army & Air Force Exchange Service (“The Exchange”)

The Exchange is seeking a qualified systems furniture manufacturer/dealer to develop, furnish, and install modular workstations based on conceptual layout drawings.

1. Project Overview

The selected vendor shall:

- Take provided conceptual floor plans and workstation layouts.
- Develop detailed, vendor-specific shop drawings using the manufacturer’s systems furniture product line.
- Provide engineering and design solutions that meet the *spirit and intent* of the conceptual plans.
- Furnish, deliver, assemble, and install all specified systems furniture.

There are approximately **600 powered workstations** of varying sizes, including but not limited to:

- 6’ x 6’
- 6’ x 8’
- 8’ x 8’
- 9’ x 12’

The majority of workstations will be approximately **68” panel height**.

A limited number of 9’ x 12’ offices will:

- Extend to ceiling height
- Include doors
- Incorporate glass clerestory panels at the upper section

2. Demolition & Salvage – Area 2N (Existing)

Area **2N** is currently built out with legacy systems furniture that must be removed.

The selected vendor shall:

- Carefully demolish and remove existing systems furniture in Area 2N.
 - Coordinate with Exchange internal Facilities personnel regarding salvage operations.
 - Allow Exchange Facilities to:
 - Identify and retain components for backstock.
 - Remove selected parts prior to disposal.
 - Provide responsible recycling/disposal of remaining materials.
 - Provide documentation of recycled materials.
 - Provide credit back to AAFES for any recoverable/recyclable material value.
-

3. Reuse & Reinstallation – Area 1N

A portion of salvaged components from Area 2N shall be reused in **Area 1N**.

The selected vendor shall:

- Inventory salvaged materials.
 - Identify compatible components for reuse.
 - Integrate reused components into the new build-out in Area 1N as directed.
 - Ensure all reused components meet safety, electrical, and performance standards.
-

4. Deliverables

The selected vendor will be responsible for:

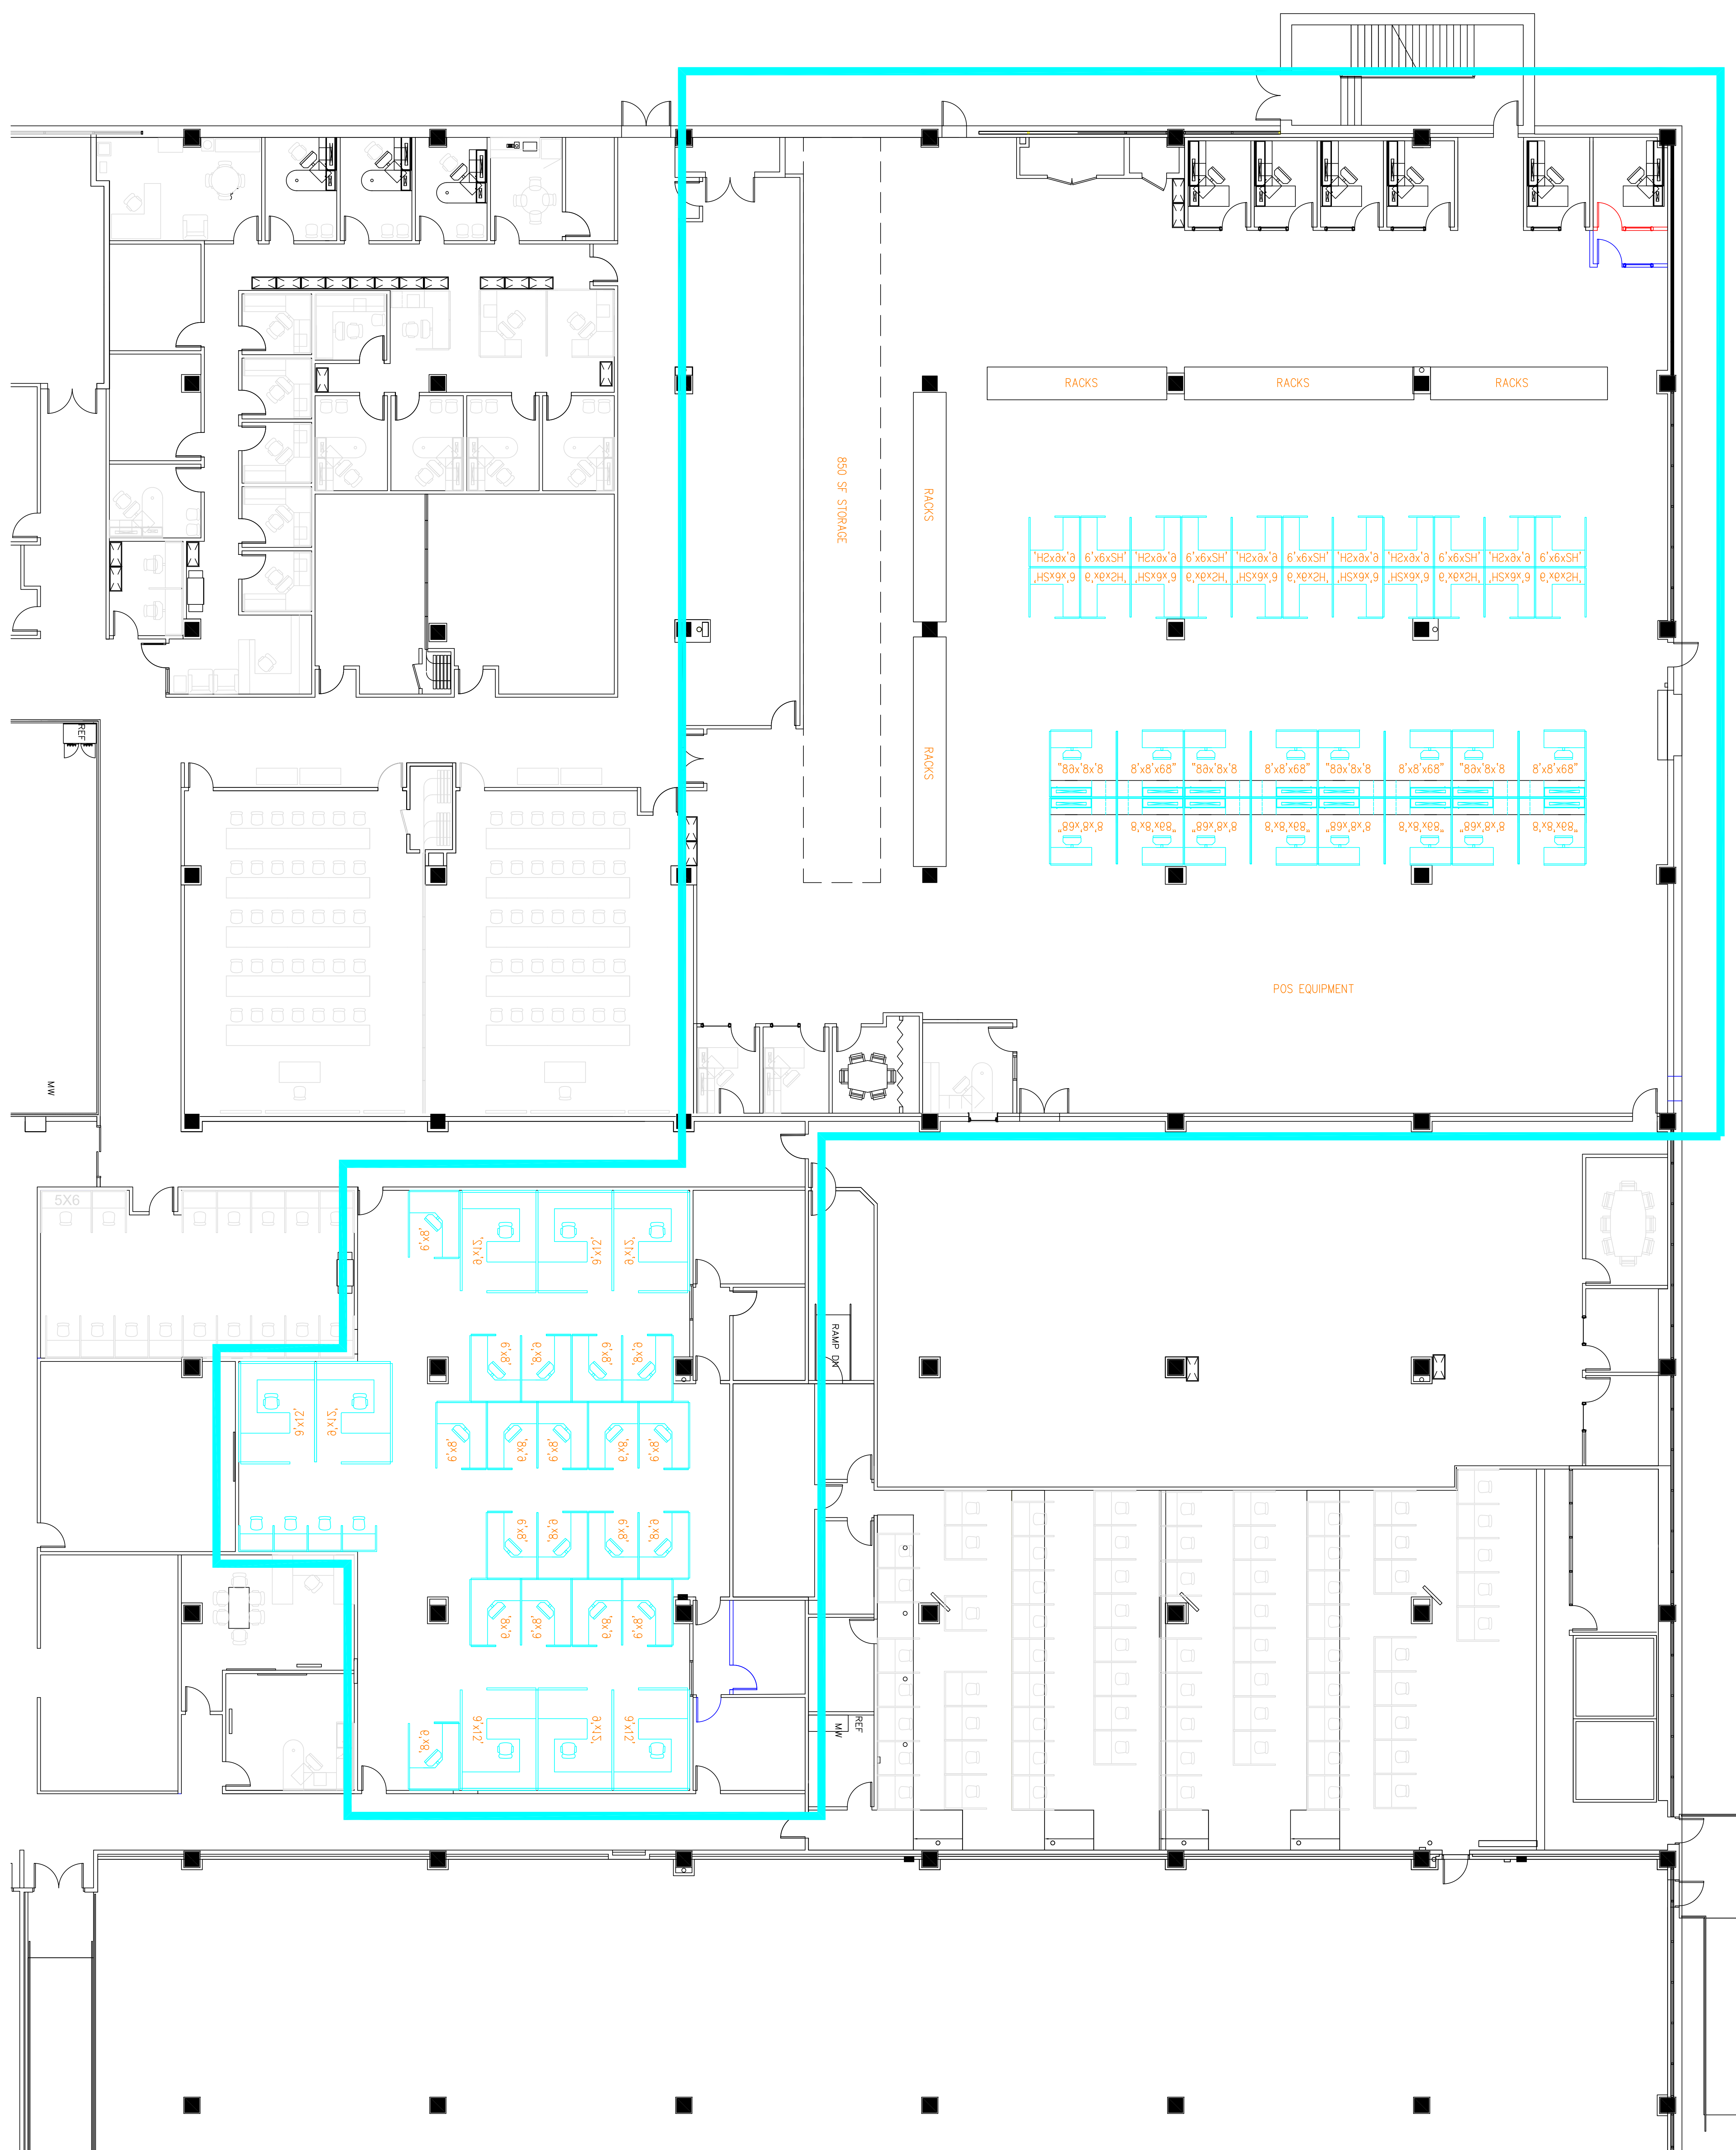

- Field verification of dimensions.
- Development of stamped, vendor-specific shop drawings.
- Electrical/data integration coordination for powered workstations.
- Phased installation plan minimizing disruption.
- Installation of approximately 600 powered workstations.

- Installation of full-height private offices with doors and clerestory glazing.
 - Final punch walk and corrections.
 - Close-out documentation.
-

5. Coordination Requirements

The vendor must:

- Coordinate with Exchange Facilities and IT.
 - Provide schedule and phasing plan.
 - Comply with all applicable codes and building standards.
 - Protect adjacent finishes and occupied areas during demolition and installation.
-
