**Justification and Approval for Other than Full and Open Competition
Sole Source Acquisition**

J&A Tracking No. FY26-0552

1. Identification of the agency and contracting activity: Defense Health Agency, Contract Operations Division – National Capital Region (DHA/COD-NCR), Walter Reed National Military Medical Center (WRNMMC) Bethesda, MD.

2. Nature and/or Description of Action being approved: New

3. Description of Supplies/Services: The WRNMMC Department of Radiology, 3DMAC requires specialized engineering, design, regulatory, and verification services to support the PEEK Cranial device and Custom Ridge Augmentation Matrix (CTRAM) Device as part of the FDA 510(k) clearance process. These services ensure WRNMMC is able to advance custom craniofacial solutions, meet FDA regulatory requirements, and enhance patient care through precision medical device technology. The Department of Radiology, 3DMAC, requires support from a Vendor to advance two patient-specific medical device programs requiring FDA 510(k) clearance:

- 3D Printed PEEK Cranial Implant
- 3D Printed Customized Titanium Ridge Augmentation Matrix (CTRAM)

These devices require engineering, design, risk management, verification, validation, quality documentation, and design transfer support aligned with FDA regulations and WRNMMC's internal processes. These services will allow WRNMMC to meet regulatory requirements, support patient-specific implant manufacturing, and improve surgical outcomes

This requirement requests the approval of a Sole Source contract to 3D Systems Healthcare, in order to procure Product Development of Custom Ridge Augmentation Matrices to the 3D Medical Applications Center to the 3D Medical Applications Service, Department of Radiology, at the WRNMMC. Defense Health Contracting Activity Healthcare Contracting Division – North East (HCD-NE) proposes to issue a Firm-Fixed Price (FFP) contract with an estimated [REDACTED] and an estimated Period of Performance (POP) consisting of a one-year Base and One (1) twelve (12) month option period.

Within the acquisition package provided by the WRMMC, the customer provided a signed Interdependent Government Cost Estimate (IGCE) and Statement of Work (SOW).

Period	Period of Performance or Required Delivery Date	Estimated Value	Type of Funding
Base Period	02/24/2026 – 02/23/2027	[REDACTED]	OEM
Option Period 1	02/24/2027 – 02/23/2028	[REDACTED]	OEM
Total		[REDACTED]	

4. Statutory Authority Cited permitting other than full and open competition: Acquisition of commercial item(s) conducted pursuant to FAR 6.103-1 (b)(c)(i) Only one responsible source and no other supplies or services will satisfy agency requirements.

5. Rationale Justifying Use of the Statutory Authority Cited:

Walter Reed National Military Medical Center (WRNMMC) has established an advanced and mature in-house 3D medical printing capability that produces a significant volume of patient-specific 3D products annually. These products include, but are not limited to, anatomical models for surgical planning, patient-specific cutting guides, implants, prosthetic components, and pre-operative simulation tools across multiple clinical specialties. The consistent annual production of these 3D products directly supports WRNMMC's mission to deliver complex, high-acuity care to Service members and beneficiaries.

The use of 3D-printed medical products has demonstrably enhanced patient outcomes by improving surgical precision, reducing operating room time, minimizing intraoperative risk, and supporting faster recovery and rehabilitation. These products enable surgeons and clinicians to visualize complex anatomy, tailor procedures to the individual patient, and deliver personalized care that cannot be achieved through standard, off-the-shelf medical solutions. As a result, WRNMMC's 3D medical applications capability has become an integral component of patient care delivery rather than an ancillary service.

3D Systems Healthcare possesses unique technical capabilities, proprietary software, and licensed technologies that directly support WRNMMC's specific clinical workflows and regulatory requirements. The designs and outputs generated under this effort are highly customized to WRNMMC's clinical protocols, equipment configurations, quality management systems, and patient population. These designs are not generic commercial products; rather, they are tailored solutions developed in close coordination with WRNMMC clinicians and engineers to meet precise clinical and regulatory standards.

Due to the proprietary nature of 3D Systems Healthcare's technology, intellectual property, and specialized expertise, another vendor cannot readily replicate these capabilities without substantial duplication of effort, extended transition timelines, and unacceptable clinical risk. Transitioning to an alternate source would require re-validation of design processes, re-establishment of regulatory and quality controls, retraining of clinical and technical staff, and potential redesign of patient-specific solutions, which could disrupt ongoing patient care.

Failure to utilize 3D Systems Healthcare for this requirement presents significant risks, including delays in patient-specific treatment, reduced surgical efficiency, increased procedural risk, and degradation of WRNMMC's established 3D medical production capability. These risks would

directly impact patient outcomes and WRNMMC's ability to meet its mission requirements within the required timeframe and without unacceptable risk.

6. **Efforts to Obtain Competition:** N/A.

7. **Actions to Increase Competition/Remove or Overcome any Barriers to Competition:** At this time, there are no sources available that can meet the unique need of the requirement (See the Contract Specialist market research for full details). For future requirements of similar products, the Government will consider new technology if the market research supports the fact that alternative products are 100% compatible with WRMMC mission, and the alternative products provide additional benefits to the Government such as cost savings and/or performance efficiencies.

8. **Market Research:** On February 19, 2026, a "Notice of Intent to Sole Source" this requirement to 3D Systems Healthcare was posted on SAM.gov for five (5) days in accordance with FAR 5.203(a) - Publicizing and Response Time. No responses were received from industry. As a result, DHA HCD-NE will solicit this requirement as a sole source contract to 3D Systems Healthcare. The contract will be issued as the most logical and cost-effective strategy and solution to the Government with a one 12-month base period and one (1) 12 (twelve) month option periods in fulfilling the agency requirements, and critical services. **Determination that Anticipated Cost to the Government will be Fair and Reasonable:** The Government will make a determination of fair and reasonable pricing, using the procedures in FAR 13.106-3(a), Basis for Award.

9. **Other Facts:** N/A

a. Procurement History:

(1) Is this a new requirement? *YES*

(2) If 9.a.(1) is No, was the action just prior to this one competed? *N/A*

(3) If 9.a.(2) is Yes, what has changed where this action cannot be competed? *N/A*

b. Additional Information: *N/A*

10. **Interested Sources:** To date, no other sources have expressed an interest in this requirement.

11. **Technical/Functional Representative:**

I certify that the information provided in this justification, is accurate and complete to the best of my knowledge and belief.

[Redacted Signature]

02/19/2026

Andrea Reyes
Health System Specialist

12. Requirements Certification:

I certify that the information provided in this justification, is accurate and complete to the best of my knowledge and belief.

[Redacted Signature]

Health System Specialist

Date

13. Fair and Reasonable Cost Determination: The Government will make a determination of fair and reasonable pricing, using the procedures in FAR 13.106-3(a), Basis for Award.

I have determined that the anticipated cost to the Government for this contract action is fair and reasonable.
