GENERAL INFORMATION

1. Title: Hamamatsu S360 Maintenance Agreement
2. Background Information: The Image Analysis and Artificial Intelligence Lab serves as a vital resource supporting both the Division of Translational Toxicology (DTT) and Division of Intramural Research (DIR) at NIEHS through advanced brightfield digital image capture capabilities utilizing the Hamamatsu S360 scanner. This equipment provides high-resolution digital pathology and tissue analysis essential for understanding environmental impacts on human health. The factory service and support warranty for the Hamamatsu S360 and its integrated software/hardware components has expired, creating significant operational risks that threaten research continuity and data quality. Equipment failure without maintenance coverage could halt ongoing studies, jeopardizing multi-year research investments and potentially delaying critical findings that inform public health policy. Professional maintenance ensures consistent, high-quality image acquisition essential for reproducible research results that meets standards for scientific rigor. Furthermore, preventive maintenance represents a cost-effective approach that significantly reduces the risk of catastrophic equipment failure, which could result in substantially higher replacement costs and extended research delays that would ultimately impede our ability to support the NIEHS mission with quality and efficiency.
