1.0 Background

The U.S. Department of State leads American diplomacy, with the Secretary of State serving as the President's principal foreign policy advisor. The Department's workforce includes over 12,000 Foreign Service employees representing the United States abroad, more than 9,000 Civil Service employees providing continuity and expertise, and over 37,000 Foreign Service National Staff supporting operations at overseas posts.

The Bureau of Diplomatic Security (DS) ensures a safe and secure environment for U.S. foreign policy worldwide. DS designs and manages security programs for diplomatic missions, investigates passport and visa fraud, conducts personnel security investigations, and protects the Secretary of State and visiting dignitaries. Under the Omnibus Diplomatic Security and Antiterrorism Act of 1986, DS is responsible for safeguarding life, property, and information.

Within DS, the Office of the Chief Technology Officer (DS/EX/CTO) drives the Bureau's mission through technology and data services. Led by the Chief Information Officer (CIO), DS/EX/CTO manages IT program requirements and oversees critical functions, including Application Support, Service Desk Support, Software Development, System Networking, Enterprise Architecture, Strategic Planning, Customer Engagement, Risk Management, and Business Analysis. The office is organized into four divisions: the Front Office (FO), Integrated Systems Division (ISD), Enterprise Production Services Division (EPSD), and Mission Technology Solutions (MTS) ¹.

DS/EX/CTO manages over 37 mission-critical applications and 75 concurrent IT projects, integrating cloud-based and on-premises systems to meet evolving security needs. The office collaborates with the Department, other U.S. Government entities, and Intelligence and Law Enforcement communities to ensure seamless operations. It ensures compliance with federal cybersecurity mandates, implements NIST-compliant policies, and supports the Development, Modernization, and Enhancement (DME) of DS systems. By delivering secure, adaptable, and

¹ The organization will undergo a planned organizational change that includes renaming its divisions. While the division names and leadership titles may change, the scope of work, roles, and responsibilities outlined in this document will remain unchanged. Any references to specific divisions or leadership should be understood to apply to their future equivalents under the new naming structure.

innovative IT solutions, DS/EX/CTO enables DS to meet mission requirements and advance U.S. diplomacy in all environments.

2.0 Purpose and Objective

The purpose of this contract is to support the DS/EX/CTO Information Technology Operations Division (ITOD) in its mission to unify engineering, technology advancement, and operational support into a seamless ecosystem that enhances performance, fosters innovation, and delivers reliable, scalable solutions to meet the evolving needs of the Bureau of Diplomatic Security (DS).

DS/EX/CTO/ITOD is the driving force behind a unified, intelligent ecosystem where engineering, innovation, and operational excellence converge – empowering its organization with agile, scalable, and future-ready solutions that elevate performance and spark transformative growth.

ITOD encompasses Operations Service Support, Task Area Operations, Enterprise Application Services, Network Engineering, and Operational Program Management, which include:

- **Operations Service Support:** Deskside and Systems Operations, Annex Support, Service Desk and Application Support, Training Site Management (FASTC), and Mobile Support.
- **Task Area Operations:** Operational Network Services.
- **Enterprise Application Services:** Database Services, Systems Administration Support, Operational Engineering Support, and Systems Engineering.
- **Network Engineering:** Regional Field Technology (RFT) support.
- **Operational Program Management:** Operations, Audio Visual Video Teleconference (VTC), and Vendor Services Program Management.

The Contractor will deliver flexible, targeted support through dedicated Contract Line-Item Numbers (CLINs) for labor, travel, training, and other services, enabling efficient resource management throughout the Period of Performance (PoP). This contract ensures DS/EX/CTO's IT and data initiatives advance the mission of safeguarding U.S. diplomatic personnel, missions, and information worldwide.

3.0 Scope of Work

The Contractor shall provide comprehensive support for all DS/EX/CTO and CIO functions, including mission technology solutions, integrated technology operations,

and organizational initiatives. Services must comply with all applicable federal, departmental, bureau, and organizational mandates, policies, and regulations.

The Contractor shall deliver high-impact services that enhance the CIO's ability to govern, secure, and modernize the technology environment. This includes aligning investments, risk management, data, and service delivery with mission objectives for both high side (classified) and low side (unclassified) assets and environments.

The Contractor must demonstrate attention to detail, produce clear and thorough documentation, and effectively lead cross-functional teams. All work must adhere to federal mandates, regulatory requirements, and organizational priorities. Regular communication and reporting are required to ensure transparency and accountability.

The Contractor shall provide skilled personnel capable of supporting the Division's mission across all offices and functional areas. While personnel may be assigned to specific offices within the Division, their expertise, deliverables, and services will be utilized to address broader needs across the Division and its associated programs. Contracts must demonstrate flexibility and resilience, adapting to evolving priorities, shifting workloads, and emerging requirements. The Contractor's team shall be prepared to perform assigned tasks in any location or for any mission-critical need, ensuring seamless support to the Division's overarching goals.

3.1 Operations Service Support

The Contractor shall provide comprehensive Operations Support Services to ensure the availability, reliability, and efficiency of IT systems and services supporting the Department of State (DoS) workforce. These services encompass Deskside and Systems Operations, Annex Support, Service Desk and Application Support, and Mobile Support. The Contractor shall deliver these services in alignment with the DS/EX/CTO Service Level Agreements (SLAs) and adhere to established policies and procedures. The scope of work is organized into the following key areas:

3.1.1 Service Desk and Application Support

The Contractor shall operate a centralized service support center to manage incidents, problems, service requests, and events. Responsibilities include:

- **Incident Management:**
 - Detect, record, classify, investigate, diagnose, escalate, resolve, and close incidents to restore normal service operations promptly.

- Provide Level 1, Level 2, and Level 3 support, ensuring seamless escalation and resolution.
- Maintain and manage the DS ServiceNow/ManageEngine Incident Management system, including hardware, software, databases, and reporting tools.
- Utilize remote-control capabilities to resolve incidents and implement corrective actions.
- Document solutions in a centralized knowledge base and ensure updates to inventory, asset, and configuration records.
- **Problem Management:**
 - Minimize the adverse impact of incidents and problems by identifying root causes, implementing corrective actions, and preventing recurrence.
 - Perform proactive and reactive problem management, including trend analysis and predictive activities.
 - Maintain a Problem Management knowledge base accessible to DS personnel, documenting known errors, workarounds, and resolutions.
- **Service Request Management:**
 - Manage end-to-end service requests, including authorization, customer engagement, logging, tracking, and fulfillment.
 - Coordinate with local support teams for delivery and installation of IT assets.
 - Ensure timely resolution and customer satisfaction for all service requests.
- **Reporting and Metrics:**
 - Provide regular reporting on incident resolution, problem management, service center utilization, and customer satisfaction. This includes reporting metrics and trends related to customer service ticket processing.
 - Maintain historical records and trend analysis to support continuous improvement.
 - Track, manage, and report Service Center utilization.
 - Maintain and provide escalation contact list(s) for all Service Towers (including Third Parties such as vendors and services Contractors).
 - Document solutions to Resolved Incidents in knowledge database
 - Develop and provide recommendations for improvements to Self-Help Support capabilities

3.1.2 Deskside and Systems Operations

The Contractor shall provide deskside, and systems operations support to ensure the stability and functionality of IT infrastructure. Responsibilities include:

- **Desktop Services:**
 - Deliver hardware and software support for end-user devices, including printers, scanners, and JWICS desktop computers.
 - Perform equipment refresh and troubleshooting for warranty and non-warranty devices.
- **Data Center Services:**
 - Provide 24x7 server monitoring, problem escalation, backup and restore, virtual infrastructure management, storage solutions, patch application, and compliance reporting.
 - Manage network and application account creation and support.
- **Virtual Desktop Infrastructure (VDI):**
 - Provision, configure, and manage VMware-based cloud infrastructure and VDI environments.
 - Implement security measures, optimize performance, and ensure scalability.
 - Deployment and configuration of VDI environments using VMware Horizon or similar technologies.
 - Configuration of virtual desktop pools, user profiles, and application virtualization.
 - Optimization of VDI performance and scalability.
- **Cybersecurity Support:**
 - Monitor and maintain security controls, including firewalls, intrusion detection/prevention systems, and access controls.
 - Participate in and support regular security assessments and audits.
- **Command Center Support:**
 - Maintain IT systems, phones, video walls, and VTC equipment in the DS Command Center.
 - Perform preventative maintenance, diagnostics, and training for administrators and users.
 - Provide IT operational support for failover sites including conference and training center locations.
- **Reporting and Metrics:**

- Document solutions to resolved incidents in central knowledgebase. Accurately update all information pertinent to trouble ticket including general verbiage, codes, etc.al.
- Provide Incident Management and Problem Management reporting as required.
- Participate in developing Problem Management requirements and policies.
- Develop and implement appropriate process and procedures and methodologies that support DS-approved Problem Management requirements and policies that comply with DS requirements.
- Develop and recommend corrective actions or solutions to address recurring incidents and problems, as well as mitigation strategies and actions to take to avert potential problems identified through trend analysis
- Document and update Problem Management knowledgebase with information regarding problem resolution actions, activities and status (e.g., root cause, known errors, workarounds, etc.) and notify all appropriate stakeholders of availability of information.

3.1.3 Annex Support

The Contractor shall provide IT operational support for failover sites, conference centers, and training facilities. Responsibilities include:

- **Video Teleconference (VTC) Support:** Collaborate with vendors and government agencies to design, install, and maintain VTC systems in SCIF-level areas. Perform preventative maintenance, diagnostics, and upgrades.
- **Facility IT Support:** Ensure operational readiness of IT infrastructure at annex locations, including network configurations, servers, and end-user devices.

3.1.4 Mobile Support

The Contractor shall support the lifecycle management of mobile devices, including procurement, inventory, configuration, issuance, maintenance, and disposal. Responsibilities include:

- **Asset Management:** Apply 14 FAM 420 and DS CTO Mobile Device SOPs to manage inventory and account for over 35,000 components across domestic and regional offices.
- **Device Support:** Troubleshoot, repair, and dispatch mobile devices, ensuring compliance with standards and policies.

3.1.5 Training Site Management (FASTC)

The Contractor shall provide operations, maintenance, and technical support for the Foreign Affairs Security Training Center (FASTC) located in Blackstone, Virginia. Responsibilities include:

- **IT Infrastructure Support:**

- Manage secure and unsecure voice, video, and data connections (OpenNet and ClassNet networks).
- Provide on-site support for network circuits, topology, routers, firewalls, IDPS, and UPS systems.
- Monitor, provision, and troubleshoot the network enterprise on a continuous basis.
- Coordinates setup and changes to networking systems.

- **System Administration:**

- Coordinate with DS/DT for data center improvements, lifecycle upgrades, and infrastructure equipment installations.
- Monitor system operations to identify and resolve potential issues, ensuring adherence to operational guidelines.
- Implement system software changes, operating system updates, and corrective actions for IT equipment or software malfunctions.
- Develop and implement server performance standards and recovery plans for system data in the event of failure.
- Prepare, recommend, coordinate, and implement plans for the recovery of system data in the event of IT equipment or software failure. The contractor provides interpretations of regulations and guidance concerning systems administration.

- **Asset and Inventory Management:**

- Track and manage Government Furnished Property (GFP), Government Furnished Equipment (GFE), and related assets.
- Maintain accurate records of hardware and software inventory, including risk mitigation for equipment approaching End of Life (EOL).

- **Documentation and Standards Development:**

- Develop and maintain Standard Operating Procedures (SOPs), contingency plans, configuration guides, network diagrams, and outage notices.

- Ensure all documentation reflects current operational practices and is accessible to relevant stakeholders.
- Provide data center knowledge on policies and procedures related to data center best practices.
- **Technical Advisory Services:**
 - Provide expert guidance on system enhancements, capacity planning, and performance optimization.
 - Plan, design, and conduct system testing to ensure successful implementation of new technologies.
 - Prepares test data, models and analyzes results to determine effectiveness of system modifications or enhancements.
 - Establish baseline procedures and timeframes and initiates and oversee the accomplishment of testing.
- **Training Network and User Support:**
 - Assist users with connecting to training resources, troubleshooting network connectivity issues, and managing printer setup.
 - Configure user access to relevant applications and verify account creation.
 - Perform “Day One” classroom checks to confirm user logins, network availability, and VTC configurations.
- **Non-Consolidated Client / Network and Server Support:**
 - Develop and implement standards and criteria for assessing server performance for FASTC enterprise LAN.
 - Establish baseline procedures and timeframes and initiates and oversee the accomplishment of testing.
 - Prepares test data, models and analyzes results to determine effectiveness of system modifications or enhancements.

3.1.6 Planning, Analysis, and Self-Help Support

The Contractor shall provide planning and analysis services to optimize service delivery and reduce costs. Responsibilities include:

- Identify solutions to minimize service center calls, improve self-help capabilities, and enhance end-user training.
- Implement interactive voice response (IVR), AI chatbots, and intranet-based self-service tools for password resets, knowledge base access, and incident status tracking.

3.1.7 Reporting and Documentation

The Contractor shall maintain updated systems documentation, including inventory, diagrams, change requests, and SOPs. Responsibilities include:

- **Service Center Reporting:** Provide access to service center reports, including utilization statistics, trends, and customer satisfaction metrics.
- **Knowledge Management:** Maintain centralized knowledge bases for incident and problem management, ensuring accessibility to DS personnel.

3.2 Task Area Operations

The Contractor shall provide comprehensive operational support for Task Area Operations, encompassing specific operational task area support and Operational Network Services for the Department of State (DoS). These services include lifecycle management, network operations, cloud migration, DevSecOps platform support, and data analytics. The Contractor shall ensure the availability, reliability, security, and performance of IT systems and services in alignment with DS/EX/CTO policies, procedures, and Service Level Agreements (SLAs). The scope of work is organized into the following key areas:

3.2.1 Data Network Services

The Contractor shall manage and maintain the Department's data network infrastructure to ensure optimal performance, availability, and security. Responsibilities include:

- **Network Lifecycle Management:**
 - Perform requirements gathering, engineering, design, implementation, testing, and service provisioning for Wide Area Networks (WAN), Local Area Networks (LAN), Virtual Private Networks (VPN), Hybrid cloud infrastructure, and network security systems.
 - Conduct routine system maintenance, troubleshooting, monitoring, security patching, system upgrades, and component changes.
- **Network Operations and Administration:**
 - Manage network systems, including performance monitoring, problem resolution, change management, and capacity planning.
 - Administer bandwidth, routers, firewalls, IP addressing schemes, and VPN configurations.

- Maintain all network service computing resources, including hardware, operating system software, and applications.
- Ensure compliance with IT service continuity plans and recover services from major disruptions within acceptable timeframes.
- **Network Monitoring and Reporting:**
 - Proactively monitor network systems to identify and resolve potential or actual failures.
 - Record system performance data for metrics and reporting purposes.
 - Provide capacity and performance reports on a quarterly basis.
 - Provide capacity planning assistance to develop network resource requirements projections.
 - Report on performance against service-level requirements.
- **Network Documentation:**
 - Develop and maintain detailed documentation for network system specifications, topologies, circuit locations, firewall policies, IP addressing tables, and hardware/software inventories.
 - Update network diagrams quarterly and as required.
 - Develop and document requirements and policies for network monitoring and problem management.
 - Develop and document procedures for administration that meet requirements and adhere to defined policies and procedures.
 - Document router configuration files and IP addressing schemas.
- **Network Security:**
 - Manage and maintain key management services supporting data-in-transit and data-at-rest encryption.
 - Implement proactive monitoring and self-healing capabilities to limit network outages.
 - Ensure all network administration activities adhere to defined change management processes and security policies.

3.2.2 Cloud Migration and Operations [MOVE TO 3.1 Section as its own under Operations Support]

The Contractor shall support the Department's transition to cloud-based solutions to enhance scalability, cost-effectiveness, and operational efficiency. Responsibilities include:

- **Cloud Migration:**
 - Secure cloud services in compliance with DS standards.
 - Provision and maintain Infrastructure-as-a-Service (IaaS), Platform-as-a-Service (PaaS), and Software-as-a-Service (SaaS) models.
- **Cloud Operations:**
 - Operate and monitor cloud services consistently across DS/CTO application teams.
 - Maintain secure and hardened operating system images for IaaS-based applications.
 - Implementation and management of security measures to ensure the confidentiality, integrity, and availability of data.
- **Secure Configuration:**
 - Implement and maintain secure PaaS configurations by establishing, configuring, and continuously monitoring PaaS services to meet State security standards, including compliance with applicable federal regulations.
 - Develop and enforce secure operational practices by collaborating with State stakeholders to create and enforce policies, procedures, and automated workflows that ensure secure deployment, management, and scaling of PaaS services.
 - Work with DevSecOps to integrate security into pipelines, maintaining audit trails, and providing documentation and training to State personnel on secure cloud operations.
- **Cloud Architecture Optimization:**
 - Review existing architecture and define optimal cloud architecture aligned with DS objectives.
 - Configuration and management of virtual machines, networks, cloud services, and storage resources.
 - Supporting migration of DS applications and services to the cloud, including development and engineering to refactor applications for the cloud.
 - Work closely with DS/EX/CTO Divisions to provide recommendations for alternative or enhanced operational solutions.

3.2.3 DevSecOps Platform Support

The Contractor shall establish and maintain centralized DevSecOps platforms to streamline and accelerate the flow of capabilities from development to production. Responsibilities include:

- **Platform Operations:**
 - Operate and monitor DevSecOps platforms to ensure optimal performance and availability.
 - Capture and document organizational procedures for application lifecycle management, including onboarding, operational changes, and deactivation.
- **Site Reliability Engineering (SRE):**
 - Improve performance and reliability of software systems through automation of manual processes, managing system health, and balancing the need for new features with the need for stability.
 - Create and maintain monitoring systems to track performance and reliability
 - Provide incident management to minimize the impact of downtime

3.2.4 Firewall and Perimeter Device Management

The Contractor shall manage and maintain DS firewall infrastructure to ensure proper functionality and security. Responsibilities include:

- **Firewall Operations:**
 - Configure, monitor, and maintain firewall components deployed to support CTO/OPS managed systems.
 - Manage firewall change requests, routing transparency, and IP address changes for circuits.
 - Monitor and manage circuits for extranet and external networks.
- **Incident Response:**
 - Initiate incident response to expedite restoration of services in case of system degradation or outages.
 - Implement monitoring capabilities on designated IT systems and equipment.

3.2.5 Data Analytics and Reporting

The Contractor shall support the integration of data analytics solutions to enable data-driven decision-making across the Bureau. Responsibilities include:

- **Data Modeling and Capture:**
 - Provide consistent and continuous data modeling across the Bureau to ensure cybersecurity compliance and vendor-supported disposition of active IT assets.

- Capture predictive data to assess infrastructure risks and cost estimates for remediation.
- **Operational Insights:**
 - Capture, review, and report user application/system usage to support trending and historical modeling activities.
 - Provide recommendations for alternative or enhanced operational solutions.
- **Dynamic Dashboards:** Develop dashboards to provide predictive insights that improve efficiencies, cost savings, and strategic decision-making.

3.2.6 Operation Network Services

The Contractor shall provide operational network services to ensure the availability and reliability of DS infrastructure. Responsibilities include:

- **Provisioning and Maintenance:**
 - Procure, configure, and maintain network components and circuits under DS management control.
 - Ensure all new circuits, devices, and software are included in configuration management documentation.
- **Capacity Planning:**
 - Provide capacity planning assistance to develop network resource projections.
 - Recommend network capacity thresholds and provide quarterly performance reports.
- **Incident and Problem Management:**
 - Identify and resolve network problems in accordance with Incident and Problem Management policies, procedures, and SLAs.
 - Coordinate resolution of circuit problems with third parties, including public carriers, DT, ISPs, and affiliates.
- **Operational Reporting:**
 - Maintain performance and cost information for the operation and support of existing infrastructure and applications.
 - Report performance against service-level requirements and provide monthly updates on circuit catalogs.
 - Identify circuits that are underutilized and provide reporting that can assist with decommissioning unused circuits or downgrading speed to save cost.

3.2.7 Infrastructure Monitoring and Maintenance

The Contractor shall support proactive monitoring and maintenance of infrastructure resources to ensure optimal availability and performance. Responsibilities include:

- **Monitoring Tools:**

- Utilize tools such as Splunk, Neuralstar, Qmulos, Cribl, and Power BI to actively monitor infrastructure resources, assets, and mission support applications.
- Implement measures to improve tool monitoring operations, enhance performance thresholds, and provide non-compliance notifications.

- **Maintenance Activities:**

- Perform application maintenance, server upgrades, security compliance, and integration.
- Maintain operational requirements and reporting services.

3.3 Enterprise Application Services

The Contractor shall provide comprehensive Enterprise Application Services to support the Department of State (DoS) in managing and enhancing its IT systems and infrastructure. These services encompass Database Services, Systems Administration Support, Operational Engineering Support, and Systems Engineering. The Contractor shall ensure the availability, reliability, security, and performance of IT systems while adhering to DS/EX/CTO policies, procedures, and Service Level Agreements (SLAs). The scope of work is organized into the following key areas:

3.3.1 Special Support Services

The Contractor shall deliver specialized support services to meet unique operational and technical requirements. Responsibilities include:

- **VIP and Event Support:**

- Provide walk-in, remote, and onsite support for designated DS executives and periodic events.
- Coordinate technical initiatives, including DS-approved pilots, community exchanges with external Federal partners, and other DoS offices.

- **Technical Development and Training:**

- Deliver development services for DS customers as part of CTO-managed projects.

- Provide training, upgrades, and break/fix support to improve IT and business productivity.
- **Service Quality and Coordination:**
 - Uphold DS/EX/CTO IT service quality requirements via SLAs.
 - Coordinate with the COR for advance planning and execution of special support services.

3.3.2 Systems Administration and Asset Management

The Contractor shall provide systems administration and asset management services to ensure the operational readiness and security of IT systems. Responsibilities include:

- **System Administration:**
 - Monitor systems to identify and resolve potential issues, ensuring adherence to operational guidelines.
 - Implement system software changes, operating system updates, and corrective actions for IT equipment or software malfunctions.
 - Develop and implement standards for assessing server performance and recovering system data in the event of failure.
- **Asset Management:**
 - Track and manage Government Furnished Property (GFP), Government Furnished Equipment (GFE), and related assets.
 - Maintain accurate records of hardware and software inventory, including risk mitigation for equipment approaching End of Life (EOL).
 - Support hardware/software refresh activities and licensing management.
- **Technical Advisory Services:**
 - Serve as a technical advisor for new requirements and system deployments.
 - Manage change control and incidents and provide guidance on system enhancements and capacity planning.

3.3.3 Systems Engineering and Integration

The Contractor shall provide systems engineering and integration services to enhance the Department's IT infrastructure. Responsibilities include:

- **Infrastructure Design and Implementation:**
 - Design, implement, and maintain networks and systems architecture to meet high availability and quality of service requirements.

- Engineer shared, integrated, and resilient infrastructures, including cloud environments, to improve flexibility, security, and cost-effectiveness.
- **Enterprise Application Integration:**
 - Integrate technical, IT, and organizational components to support unclassified and classified data and network communications.
 - Perform gap analysis, benchmarking, and data migration to ensure seamless integration of commercial components with existing infrastructure.
- **Compliance and Standards:**
 - Ensure all design documentation meets CMMI Level 3 and ISO 9001 certification standards.
 - Comply with Federal, Department of State, and NIST policies and standards.

3.3.4 Operational Engineering Support

The Contractor shall provide operational engineering support to streamline integration, consolidate solutions, and introduce efficiencies across the Bureau. Responsibilities include:

- **Enterprise Architecture Management:**
 - Document and monitor the Bureau's enterprise architecture to ensure compliance, capacity, sustainability, and security posture.
 - Conduct gap analysis for current state discovery and recommend enhancements based on findings.
- **Emerging Technologies:**
 - Research, develop, and implement emerging technologies such as dashboards, automation, and innovation to support executive decision-making.
 - Proactively document capital resource relationships to support end-to-end IT operations.
- **Collaboration and Reporting:**
 - Participate in charters and working groups to ensure authorized assets and processes are integrated into the Bureau's infrastructure.
 - Provide reporting to support management and replacement of end-of-life hardware and software.

3.3.5 Catalog Procurement Services

The Contractor shall develop and maintain an online product catalog to streamline procurement processes and track service utilization. Responsibilities include:

- **Catalog Development and Maintenance:**
 - Provide and maintain an electronic product catalog, and ordering function that is accessible to DS End-Users. This includes providing product catalog variations by country and/or region
 - Validate and process product requisitions, obtain approvals, and create orders.
- **Order Fulfillment and Tracking:**
 - Place product orders, provide fulfillment estimates, and track order status to closeout.
 - Invoice DS in accordance with approved procedures and feed data to DS finance systems.
- **Reporting and Variations:**
 - Track and report on requisitions and order throughout their lifecycle, ensuring compliance with procedures and proper closeout.
 - Offer product catalog variations by country and region.

3.3.6 Exception Requests Services

The Contractor shall manage exception requests for products or services outside of standard DS policies. Responsibilities include:

- **Process Development:**
 - Develop and maintain exception request processes, procedures, and required forms in the Standards and Procedures Manual.
 - Document exception requests in the Service Center Incident Management system.
- **Request Fulfillment:**
 - Analyze, recommend, and process exception requests to fulfillment or denial.
 - Provide status updates to requestors and implement approved requests.

3.3.7 Enterprise Data Management and Collection

The Contractor shall support enterprise data management and collaboration services to enhance operational efficiency and decision-making. The Contractor shall work closely with Task Area Operations for specific areas of support. Responsibilities include:

- **Data Management:**
 - Capture, document, and monitor the Bureau's IT infrastructure and systems topology.

- Ensure the integrity of IT systems and infrastructure assets.
- **Collaboration Services Integration:** Integrate collaboration tools such as Microsoft SharePoint and Dynamics to streamline workflows and improve productivity.
- **Business Process Reengineering:** Conduct feasibility studies, requirements analysis, and system design alternative studies to optimize business processes.

3.3.8 Operational Support

The Contractor shall provide the following deliverables to support Enterprise Application Services:

- **Documentation:**
 - Develop and maintain standards, procedures, and policies for catalog procurement, exception requests, systems administration, and enterprise architecture.
 - Provide updated network diagrams, system configurations, and inventory records.
- **Reporting:**
 - Deliver capacity and performance reports, order tracking updates, and exception request status reports.
 - Provide recommendations for system enhancements, emerging technologies, and operational efficiencies.
- **Technical Support:**
 - Offer VIP support, training, and technical advisory services to meet unique mission requirements.
 - Ensure compliance with all applicable policies, standards, and SLAs.

3.4 Network Engineering

The Contractor shall provide comprehensive Network Engineering and Regional Field Technology (RFT) support to ensure the availability, security, and performance of the Department of State's (DoS) IT infrastructure. These services include enterprise and non-enterprise network design, implementation, maintenance, and compliance activities, as well as regional technical support for DS offices across the United States. The Contractor shall adhere to DS/EX/CTO policies, procedures, and Service Level Agreements (SLAs) while maintaining a focus on continuous

improvement and customer satisfaction. The scope of work is organized into the following key areas:

3.4.1 Network Engineering and Security Compliance

The Contractor shall support the design, implementation, and maintenance of secure and resilient network systems while ensuring compliance with federal cybersecurity policies and mandates. This work will require interactions and collaboration with CTO Front Office. Responsibilities include:

- **Risk Management Framework (RMF) Support:**
 - Produce and maintain security documentation for IT systems operated by DS.
 - Update and maintain RMF compliance artifacts, including technical control values.
 - Support automated continuous monitoring activities to ensure ongoing authorization compliance for systems and applications.
 - Proactively communicate IT operational status that may impact the Authority to Operate (ATO) process.
 - Provide subject matter expertise on NIST 800 Series Special Publications and federal cybersecurity policies.
- **Network Monitoring and Tools Implementation:**
 - Deploy and manage continuous monitoring tools (e.g., Splunk) for OpenNet, ClassNet, and DMZ environments.
 - Establish network configuration version control mechanisms, Deploy IaC tools, and establish scripting for managed DS assets.
 - Provide training and interface support to IT operational, cybersecurity, and project teams on monitoring system outputs.
 - Assess and monitor cloud delivery systems and "as-a-service" environments to ensure compliance and performance.
- **Firewall and Security Management:**
 - Manage DoS Enterprise and DS Application/Server (NSX) firewalls, including change initiation, tracking, and implementation.
 - Ensure compliance with SLA requirements for application status, uptime, and capacity management.
 - Assist with the deployment of Cloud NGFW infrastructure as a subject matter expert.

3.4.2 Regional Field Technology (RFT) Support

The Contractor shall provide technical support for DS regional offices located outside the Washington, DC area, including San Juan, Puerto Rico. Responsibilities include:

- **User Support and Local Administration:**
 - Assist users with PKI card access, network logins, Global OpenNet (GO) Virtual and GO Browser, smartphones, and other IT issues.
 - Act as a Local Registration Authority (LRA) to create PIV badges for users.
- **Equipment Maintenance and Asset Management:**
 - Maintain network equipment for OpenNet and ClassNet, VTC equipment, GO desktops (laptops), and standalone workstations connected to non-Department databases.
 - Manage inventory and asset tracking for DS-tagged equipment, including fingerprint scanners, smartboards, scanners, thin clients, printers, plotters, MiFi devices, monitors, and TVs.
- **Technical Assistance:**
 - Collaborate with IRM/DSS personnel to set up, maintain, and troubleshoot IT equipment.
 - Work closely with DS/EX/CTO Division's on specific asset support used by field offices (e.g., Mobile Biometrics).
 - Provide timely resolution of technical issues to ensure uninterrupted operations.

3.4.3 Change and Release Management

The Contractor shall support the planning, tracking, and implementation of changes to DS IT systems and applications. Responsibilities include:

- **Change Management:**
 - Initiate, track, and implement changes to network systems and applications in compliance with DS policies.
 - Coordinate with the DS IT Review Board to ensure proper oversight and approval of changes.
- **Release Management:**
 - Manage application and system releases to ensure minimal disruption to operations.
 - Monitor SLA compliance for internal systems and environment providers.

3.4.4 Operational Monitoring and Reporting

The Contractor shall ensure the performance and availability of DS IT systems through proactive monitoring and reporting. Responsibilities include:

- **Application and System Monitoring:**
 - Monitor application status, uptime, and capacity to ensure compliance with SLAs.
 - Provide regular reports on system performance and identify areas for improvement.
- **Training and Interface Support:**
 - Deliver in-house training to IT operational and cybersecurity teams on monitoring tools and system outputs.
 - Facilitate collaboration between project teams and operational staff to optimize system performance.

3.5 ITOD Operational Program Management

The Contractor shall provide comprehensive Operational Program Management services to support the Department of State (DoS) in managing and enhancing its IT operations, Audio Visual Video Teleconference (VTC) systems, and Vendor Services Program. These services include program and project management, IT lifecycle and operations management, asset lifecycle management, and support for video conferencing and video wall systems. The Contractor shall ensure the availability, reliability, and performance of IT systems and services while adhering to DS/EX/CTO policies, procedures, and Service Level Agreements (SLAs). The scope of work is organized into the following key areas:

3.5.1 Audio Visual and VTC Support

The Contractor shall provide design, implementation, maintenance, and operational support for VTC systems and video wall systems to meet DS mission requirements. Responsibilities include:

- **Video Teleconference (VTC) Services:**
 - Design and install VTC systems on approved government hardware to meet DS strategies and requirements.
 - Provide operational support for point-to-point and multi-point calls, presentation capabilities (e.g., PowerPoint, electronic whiteboards, document cameras), and teleconferencing integration.

- Monitor and support calls in progress, manage video conference and room calendars, and ensure clock coordination.
- Provide monthly reports on bridged calls and provisioning support for VTC services.
- **Video Wall Systems:**
 - Design, implement, and maintain enterprise-level digital display wall systems used to monitor or manage mission-related activities.
 - Configure, program, and maintain interface components and control modules.
 - Manage and maintain display content to ensure alignment with DS strategies and requirements.

3.5.2 IT Asset Lifecycle Management

The Contractor shall provide full lifecycle management for CTO-managed IT assets, ensuring compliance with cybersecurity supply chain risk management standards (NIST SP 800-161). Responsibilities include:

- **Asset Management Policies and Procedures:**
 - Develop and maintain policies and procedures for IT asset lifecycle management, configuration management, and production change management.
 - Conduct annual IT asset inventories and ensure accurate tracking of all assets.
- **Procurement and Excess Management:**
 - Coordinate procurement services, receive procurements, and manage the full lifecycle of IT assets, including excess and disposal.
 - Facilitate procurement through USG channels or contractor-supported purchases for sole USG use.
- **Risk Mitigation and Reporting:**
 - Monitor and report on the state and condition of hardware and software components, including risk mitigation for equipment approaching End of Life (EOL).
 - Support lifecycle replacement planning and provide cost estimates for EOL refresh activities.

3.5.3 IT Lifecycle and Operations Management

The Contractor shall support IT lifecycle and operations management activities to ensure accountability, quality assurance, and alignment with DS mission objectives. Responsibilities include:

- **IT Lifecycle Management:**
 - Plan and analyze IT requirements, define acquisition and management strategies, and oversee hardware and software license management.
 - Support engineering, integration, testing, implementation, migration, training, and knowledge transfer activities.
 - Perform technology refresh and maintenance to ensure operational readiness.
- **Service Documentation and Oversight:**
 - Fully document and maintain all lines of services that support business requirements.
 - Track the monetary value of defined services and the skills required for service delivery.
- **Quality Assurance:** Apply quality assurance processes to critical IT lifecycle and service management functions to ensure proper oversight and accountability.

3.5.4 Program and Project Management

The Contractor shall provide program and project management services to support the planning, execution, monitoring, and closeout of IT projects. Responsibilities include:

- **Project Management Lifecycle (PLC):**
 - Employ the CTO-approved PLC, which includes seven lifecycle phases, to ensure projects are controlled, measured, documented, and continuously improved.
 - Utilize waterfall, agile, hybrid, and DevSecOps methodologies to manage projects from initial proposal through closure.
- **Project Support:**
 - Participate in all project aspects, including requests, concepts, acquisition, implementation, and post-implementation activities.
 - Report time against project management tasks via the CTO Timesheet Center and MS Project Web Application (PWA).
- **Strategic Planning and Oversight:**
 - Provide IT solutions consulting, develop project plans, and oversee IT efforts.
 - Document operational procedures and policies, perform design reviews, and schedule and monitor modifications to the IT architecture.
- **Specific Project Management Tasks:**

- Assess technical requirements for centralized account management and provide improvement plans.
- Manage daily authorization/denial of requests for accounts supporting CTO-managed systems and applications.
- Provide technical writing and documentation support, including software requirement specifications and operational procedures.

3.5.5 Cross-Functional and Strategic Support

The Contractor shall provide cross-functional support for common services and processes that apply to the provision, delivery, and management of DS/CTO IT infrastructure. Responsibilities include:

- **Enterprise Architecture and IT Business Strategy:**
 - Capture, track, and report on enterprise architecture (EA) and Application Services Branch (ASB) tasks and activities.
 - Identify existing enterprise tools and capabilities, configuration items, and network schematics.
 - Provide lifecycle replacement planning and cost estimates for IT components.
- **Operational Reporting and Analysis:**
 - Provide project-level reporting on significant efforts (e.g., Oracle OS upgrades).
 - Detail IT component classes, costs, and EOL parameters to support strategic decision-making.
- **Knowledge Transfer and Training:**
 - Design, plan, and implement IT training materials in alignment with Bureau standards.
 - Monitor and report on the effectiveness of training programs.

3.5.6 Operational Program Management

The Contractor shall provide the following deliverables to support Operational Program Management:

- **Documentation:**
 - Develop and maintain policies, procedures, and standards for IT asset management, lifecycle management, and project management.
 - Provide updated network schematics, system configurations, and inventory records.

- **Reporting:**
 - Deliver monthly reports on bridged VTC calls, IT asset inventories, and project status updates.
 - Provide cost estimates and lifecycle replacement plans for EOL assets.
- **Technical Support:**
 - Offer technical writing and documentation support for IT projects and administration.
 - Ensure compliance with applicable governmental regulations, industry best practices, and Bureau SOPs.

3.6 Enterprise Risk Management Support

The Contractor shall integrate risk management into IT project plans, ensure redundancy and failover mechanisms for critical systems, and conduct patch management and vulnerability scanning to maintain system integrity. This work will be split between the Development and Operations and Maintenance (O&M) divisions of DS/EX/CTO and BISSO and will ensure their implementation measures are acted on and measured.

3.7 Contract Administrative Requirements and Reporting

This section defines the administrative requirements and reporting methods for managing the contract and evaluating Contractor performance throughout the Period of Performance (PoP). It ensures transparency, accountability, and alignment with contract objectives. The Contractor shall:

- Perform contract project administration and project management actions as outlined in the DS/EX/CTO ITOD PWS, found in [Attachment A](#).
- Execute Agile processes and deliverables integrated into DS/EX/CTO's daily operations, as specified in [Attachment A – ITOD PWS](#).
- Fulfill Software Development Lifecycle (SDLC) requirements embedded in DS/EX/CTO's routine operations, as detailed in [Attachment A – ITOD PWS](#).

4.0 Deliverables

The Contractor shall provide deliverables that ensure efficient, accurate, and timely execution of all tasks in compliance with contract requirements, federal regulations, and Department of State policies. Deliverables must adhere to applicable standards, including FAR, DOSAR, DOSAM, FITARA, FISMA, CIO Act, PMI, and Agile methodologies, as relevant.

- **Ownership and Compliance:** All deliverables become Government property and must comply with FOIA requirements unless marked proprietary and approved by the Government.
- **Submission Format:** Deliverables shall be submitted electronically using Microsoft Office Suite tools unless otherwise directed by the Contracting Officer's Representative (COR). Hard copies may be requested by the COR.

The DS/EX/CTO ITOD PWS (found in [Attachment A](#) of this document) supplements this SOW by detailing the activities and deliverables required to assess, monitor, and manage contractor performance and contract administration. While this SOW specifies IT-related tasks, technical requirements, and deliverables, the FO PWS outlines oversight and evaluation methods to ensure compliance, quality, and alignment with expectations. The deliverables schedule and acceptance requirements specific to DS/EX/CTO FO are included in this SOW.

4.1 Operations Service Support

4.1.1 Service Desk and Application Support

- Issue broadcasts or other notices to provide status updates as required for planned and unplanned events.
- Develop and execute procedures for conducting End-User Satisfaction surveys in accordance with the Service Level Requirements.
- Create, coordinate, and manage change and configuration management processes that document the full environment (i.e., Network configuration, operational applications and services, change management review processes, enterprise configuration processes and governance in support of CTO managed and non-managed IT assets).
- In coordination with DT, maintain bureau stated quarterly average duration to close DS's "Out of Scope" IT Service tickets.
- Develop, document, and maintain in the Standards and Procedures Manual Service Request and Incident Management procedures, including procedures to receive and respond to DS Service Request Calls according to defined prioritization and resolution targets, that meet DS requirements and adhere to DS policies.

- Develop, document and maintain in the Standards and Procedures Manual Service Center Remote Device and Software Management procedures that meet requirements and adhere to defined policies
- Develop, document, and maintain in the Standards and Procedures Manual End-User Administration Contractor procedures that meet DS requirements and adhere to DS policies
- Develop, document and maintain in the Standards and Procedures Manual IMAC Contractor procedures that meet DS requirements and adhere to DS policies
- Develop, document and maintain in the Standards and Procedures Manual SPOC Contractor procedures that meet DS requirements and adhere to DS policies

4.1.2 Deskside and Systems Operations

- Develop Incident Management policies, process and procedures that support DS's Incident Management support requirements
- Identify, develop, document, and recommend appropriate Workarounds for known errors of unresolved problems and notify Incident Management and all other appropriate stakeholders of its availability if approved. Document the workaround in the knowledgebase
- Provide status reports detailing the root cause and procedure for correcting recurring Problems and Severity 1 and Severity 2 Incidents until closure as determined by DS
- Create Request for Change (RFC) documentation with recommended corrective actions to be taken to resolve a problem and submit to Change Management for review and approval

4.1.3 FASTC

- Develop and implement standards and criteria for assessing server performance for FASTC enterprise LAN.
- Develop and present plans for integrating new server technology into existing architecture.
- Plan and design support for system testing and implementation.

4.1.4 Reporting and Documentation

- The contractor shall always maintain updated systems documentation to include inventory, diagrams, change request and SOPs.

4.2 Task Area Operations

4.2.1 Data Network Services

- Provide Network documentation as required by DS
- Provide updated Network diagrams at least quarterly and as required by DS
- Develop and document network monitoring and problem management procedures, including escalation thresholds, that meet requirements and adhere to defined policies
- Develop and document network administration requirements and policies
- Develop and document network provisioning requirements and policies
- Provide capacity and performance reports on a quarterly basis

4.2.2 DevSecOps Platform Support

- Capture and document needed organizational procedures

4.2.3 Data Analytics and Reporting

- Provide consistent and continuous data modeling capture across the Bureau Enterprise to ensure cybersecurity compliance of infrastructure components as well as vendor supported disposition of all active IT assets.

4.3 Enterprise Application Services

4.3.1 Infrastructure Integration

- Design, implement, and maintain networks and systems architecture documentation. All design documentation must meet CMMI level 3 and ISO 9001 certification standards.

4.3.2 Catalog Procurement

- Develop, document and maintain in the Standards and Procedures Manual Catalog Procurement procedures that meet DS requirements and adhere to DS policies

4.3.3 Exception Requests

- Develop, document and maintain in the Standards and Procedures Manual Exception Requests process, procedures and required forms that meet DS requirements and adhere to DS policies

4.3.4 Non-Consolidated Client / Network and Server Support

- Prepare, recommend, coordinate, and implement plans for the recovery of system data in the event of IT equipment or software failure. The contractor provides interpretations of regulations and guidance concerning systems administration.
- Develop and present plans for integrating new server technology into existing architecture.

4.3.5 Enterprise Architecture

- Proactively document capital resource relationships being used to support end-to-end IT operations

4.4 Network Engineering

4.4.1 ATO Support

- Produce and maintain Security Documents related to IT systems operated by DS

4.5 ITOD Operational Program Management

4.5.1 VTC Services

- Provide monthly reports of the number of bridged calls

4.5.2 Asset Procurement and Supply Chain Management Support

- Develop policies and procedures governing the management of IT Asset life-cycling
- Develop policies and procedures to implement, manage and substance a successful Configuration Management program
- Develop policies and procedures to implement, manage and substance a successful production Change Management program

4.5.3 Cross-Functional Services

- Fully document and maintain all lines of services that support the business requirements

4.5.4 IT Project Management and Planning Support

- Draft and produce program and strategic plans and documents related to IT planning, development and implementation of hardware, software, and communication systems employed by the Bureau.
- Documenting operational procedures and policies

4.6 Contract Administrative Requirements and Reporting

This section defines the methods for administering the contract and measuring Contractor performance throughout the PoP. It ensures transparency, accountability, and alignment with contract objectives through oversight, documentation, and evaluation processes outlined in the PWS. The Contractor shall:

- Perform contract project administration and project management actions as specified in [Attachment A – ITOD PWS](#).
- Execute Agile processes and deliverables integrated into DS/EX/CTO FO's daily operations, as outlined in [Attachment A – ITOD PWS](#).
- Fulfill SDLC requirements and deliverables embedded in DS/EX/CTO FO's routine operations, as detailed in [Attachment A – ITOD PWS](#).

5.0 Deliverables Schedule

All deliverables² must be submitted electronically using Microsoft Office Suite tools unless otherwise specified in SLAs or by your direct report. Hard copies may be requested by the COR. Deliverables must adhere to the timeline specified in the contract, ensuring compliance with FAR, DOSAR, and DOSAM requirements. Table 1 identifies the deliverables with corresponding frequency:

Table 1 Deliverables Schedule

Deliverable	Frequency
Operations Service Support – Service Desk and Application Support	
Broadcasts and Notices	As Needed
End User Satisfaction Surveys	As Needed
Duration Times to close Out of Scope IT Service Tickets	Quarterly
Standards and Procedures Manual Service Center Remote Device and Software Management Documents	Annually
Standards and Procedures Manual Service Request and Incident Management Documents	Annually

² Deliverables and Delivery Schedule for Contract Management and Reporting Deliverables and Actions as well as Technical Agile and SDLC Deliverables and Actions are within [Attachment A - ITOD PWS](#).

Deliverable	Frequency
Change and Configuration Management Processes	Annually
Standards and Procedures Manual End-User Administration Contractor documents	Annually
Standards and Procedures Manual IMAC Contractor documents	Annually
Standards and Procedures Manual SPOC Contractor documents	Annually
Operations Service Support – Deskside and Systems Operations	
Incident Management Policies, Process, and Procedures	Annually
Document common workarounds documents for known errors	As Needed
Severity 1 and Severity 2 Incidents Status Reports	As Needed
Request for Change (RFC) Documentation	As Needed
Operations Service Support – FASTC	
Develop standards and criteria for assessing server performance	Annually
Develop plans for integrating new server technology	As Needed
System Testing and Implementation Plans	As Needed
Operations Service Support – Reporting and Documentation	
Systems Documentation	As Needed
Task Area Operations – Data Network Services	
Network Documentation	As Needed
Network Diagrams	Quarterly
Network Monitoring and Problem Management Documents	Annually

Deliverable	Frequency
Network Administration Requirements and Policies	As Needed
Network Provisioning Requirements and Policies	As Needed
Network Capacity and Performance Reports	Quarterly
Task Area Operations – DevSecOps Platform Support	
Document Organizational DevSecOps Platform Procedures	As Needed
Task Area Operations – Data Analytics and Reporting	
Data Modeling	As Needed
Enterprise Application Services – Infrastructure Integration	
Network and System Architecture Documentation	As Needed
Enterprise Application Services – Catalog Procurement	
Standard Operating Procedures for Manual Catalog Procurement	Annually
Order Tracking and Reporting	As Needed
Enterprise Application Services – Exception Requests	
Standard Operating Procedures for Manual Exception Requests	Annually
Enterprise Application Services – Non-Consolidated Client / Network and Server Support	
Recovery of System Data Procedures	As Needed
Plans for Integrating New Server Technology	As Needed
Enterprise Application Services – Enterprise Architecture	
Document Capital Resource Relationships	As Needed

Deliverable	Frequency
Network Engineering – ATO Support	
Security Documents	As Needed
Operational Program Management – VTC Services	
Number of Bridged Calls Report	Monthly
Operational Program Management – Asset Procurement and Supply Chain Management Support	
IT Asset Life-Cycle Management Policies and Procedures	Annually
Configuration Management Policies and Procedures	Annually
Change Management Policies and Procedures	Annually
Operational Program Management – Cross-Functional Services	
Lines of Services Documentation	As Needed
Operational Program Management – IT Project Management and Planning Support	
Project Management Documentation	As Needed
Operational Project Procedures and Policies	As Needed

6.0 Acceptance Criteria and Compliance Standards

Acceptance Criteria and Compliance Standards for Contractor Project Administrative and Management Actions and Contractor Technical Agile and SDLC Deliverables and actions are within the DS/EX/CTO FO PWS.

The Contractor shall remain engaged with the organization to stay informed of updates to policies and procedures and assist in their refinement and improvement. All deliverables and services must align with the requirements outlined in the SOW

or PWS, applicable MIL-STDs, and the Contractor's technical and business proposals. Any deviations from established policies or standards must be approved in writing by the COR or Government Task Manager (GTM). Regular audits and reviews may be conducted to ensure compliance, and the Contractor shall promptly address any deficiencies identified. Failure to adhere to these standards may result in corrective actions or contract termination.

6.1 General Compliance Requirements

The Contractor shall ensure that all work performed under this contract complies with applicable U.S. Government laws, regulations, and Department of State (DOS) standards, policies, procedures, and guidelines. This includes adherence to:

- Foreign Affairs Manuals (FAM) and Foreign Affairs Handbooks (FAH).
- CIS Critical Security Controls (CIS Controls) published by DS/CTS/TIE for use by DOS.
- NIST 800-53 (Rev 5) guidelines.
- FedRAMP Requirements: For cloud services, ensure compliance with FedRAMP-approved security controls.
- FBI Criminal Justice Information Services (CJIS) Security Policy (if applicable).
- CIO Act: Ensure IT systems meet operational and security requirements.
- FITARA: Ensure alignment with FITARA mandates for IT resource management.

Specific DOS policies include, but are not limited to:

- 5 FAM Series: Information Technology Management, Records Management, Telecommunications, IT Systems, Internet and Intranet Use, and Information Systems Management.
- 12 FAM Series: Information Security and Information Security Technology.
- 5 FAH Series: IT Systems Handbook, Web Development Handbook, and Information Assurance Handbook.
- DOSAM 639.182 – Cybersecurity Supply Chain Risk Management Evaluation Factor and Clause
- DS/DS/EX/CTO Policies and Procedures: Tailored FAM implementation procedures managed through the DS/DS/EX/CTO Process Management Group, available post-award.

Specific policies on contract performance and administration:

- FAR 42.708 for contract closeout procedures

- FAR 15.404 for performance evaluation and cost analysis
- Department of State Acquisition Regulation DOSAR 642.1502 for performance evaluation
- DOSAM guidelines for deliverable quality and compliance

6.2 Acceptance Criteria

6.2.1 Deliverable Review and Approval

All deliverables, including documents, reports, services, and other outputs, must be reviewed and approved by the COR and/or GTM. Deliverables must meet task order requirements, be legible, properly formatted, free of spelling or grammatical errors, and align with defined goals and objectives. Comments provided by the COR/GTM must be incorporated into the final version unless valid justification is provided for exclusion. If comments are deemed technically unsound or inconsistent with safe business practices, the Contractor must notify the COR/GTM. A consensus between the COR/GTM and the Contractor is required for deliverable revisions. If consensus cannot be achieved, the COR/GTM will provide final direction.

6.2.2 Submission Format

Deliverables must be submitted in both hard copy and electronic format, compatible with mutually agreed software applications.

6.2.3 Inspection and Notification

The Government will inspect deliverables for completeness, accuracy, and compliance with task order requirements. Inspection may include validation using automated tools, testing, or random checks. The COR will provide written acceptance, comments, or change requests within five (5) to 15 business days or receipt, depending on the complexity of the deliverable. Notifications of rejection will include specific deficiencies causing the rejection.

6.2.4 Correction of Deficiencies

Non-conforming products or services will be rejected. Deficiencies must be corrected within five (5) to 10 business days of the rejection notice, or as agreed upon with the COR. If deficiencies cannot be corrected within the specified timeframe, The Contractor must notify the COR immediately and provide a corrective action plan within 10 business days.

6.2.5 Contract Closeout

At contract closeout, The Contractor must submit a release of claims document and finalize costs within 90 days of task order completion, in accordance with FAR 42.708.

6.3 Performance Standards

- **Outcome:** Deliverables must fully meet contract requirements and have no material quality issues.
- **Requirements:** Deliverables must be of high quality, complete, and delivered on time. Deliverables must be written clearly and concisely, providing DOS stakeholders with a clear understanding of all deliverables.
- **Standards:** Final documentation must be spell checked, grammar checked and accepted by the Government. 100% of delivery dates specified by the Performance Based Statement of Work (PBSOW), COR, and/or SOP (if applicable) must be met.
- **Acceptable Quality Level:** Deliverables are acceptable when identified problems are corrected with minimal COR intervention. No deviation from the standard is allowed unless approved by the COR and documented through a Contract modification issued by the Contracting Officer.
- **Monitoring Source:** The COR will conduct a 100% inspection of all deliverables to ensure compliance.

7.0 Adherence to Policy or Standards

7.1 Language Requirements

English is the required language for all deliverables and communications. Future requirements may involve Operations Center support in additional languages as determined by the Department of State. Contractors must ensure that all personnel, including subcontractors and consultants, meet the language requirements specified in the SOW.

7.2 Data Rights and Ownership

- **Unrestricted Rights to Government Data:** The Government retains unrestricted rights to all Government data. Contractors must provide full copies of data in formats that are readily accessible through predominant industry and/or open data standards at no additional cost to the Government.

- **Government Data Ownership:** All Government data collected, processed, or stored in the system is the property of the Federal Government. This includes, but is not limited to, payroll data, account information, permissions, login activity, and other supporting data necessary for system functionality.
- **Unlimited Rights:** The Federal Government has unlimited rights to all data first produced under any task order in accordance with FAR clause 52.227-14. This includes new code, reports, and other deliverables, which may not be used for any purpose other than the performance of the task order without the expressed consent of the Contracting Officer. Only government encryption will be used on government data in all environments and stages of development. Private keys will be tightly regulated and escrowed with the government.

7.3 Nondisclosure Requirements

The Contractor shall sign a Non-Disclosure Agreement (NDA) on behalf of the company, if applicable, and ensure that all staff assigned to the contract, including subcontractors and consultants, execute and adhere to the terms of the NDA. This agreement protects procurement-sensitive information of the Government and proprietary information of other Contractors.

7.4 Privacy Act Compliance

Work on this contract may require access to Privacy Act information. Contractor personnel must adhere to the Privacy Act, Title 5 of the U.S. Code, Section 552a, and applicable agency rules and regulations.

7.5 Information Assurance and IT Security

The Contractor shall ensure IT security for all systems connected to the Department's network or operated by the Contractor and other external organizations for the agency, regardless of location. This includes:

- **Safeguarding Sensitive Information:** Protecting all classified and unclassified Government data, equipment, and information as sensitive business or confidential information.
- **Incident Reporting:** Reporting real or suspected incidents or violations to the Computer Incident Response Team (CIRT).
- **Threat Mitigation:** Immediately notifying the Government of new or unanticipated threats or hazards or if existing safeguards cease to function.

7.6 IT Security Training

The Contractor shall ensure that all personnel complete mandatory security awareness and role-based advanced security training annually, in accordance with OMB Circular A-130, FISMA, and NIST requirements. Personnel must sign all applicable statements of responsibilities.

7.7 Dissemination of Information

The Contractor shall properly protect all information used, gathered, or developed under this contract. This includes controlling and limiting access to sensitive information and ensuring that data and equipment are secured within their facility. The Contractor must cooperate with the Government during inspections or investigations concerning the protection of sensitive information, including providing documentation showing proof of compliance with federal requirements.

7.8 Section 508 Compliance

All electronic and information technology (EIT) products and services developed, maintained, or procured under this contract must comply with accessibility standards outlined in 36 CFR 1194, which implements Section 508 of the Rehabilitation Act of 1973, as amended. These standards ensure that EIT is accessible to individuals with disabilities, including employees and members of the public, to the maximum extent possible.

If an agency exception to these requirements exists, it must be documented and approved in accordance with applicable regulations. The Contractor is responsible for ensuring that all deliverables meet Section 508 standards unless explicitly exempted by the Government. Failure to comply with these requirements may result in rejection of deliverables or other corrective actions.

7.9 Additional Compliance Requirements

The Contractor shall ensure adherence to the following:

- **FAR Compliance:** FAR 52.227-14 - Rights in Data. FAR 39.101 - IT Security and Performance Standards.
- **DOSAR Compliance:** DOSAR 639.101 - IT Security Policies. DOSAR 642.1502 - Performance Evaluation.
- **DOSAM Compliance:** Align deliverables with enterprise architecture standards and Department of State acquisition policies. DOSAM 639.182 – Cybersecurity Supply Chain Risk Management Evaluation Factor and Clause

- **NIST Compliance:** Ensure security controls align with NIST 800-53 (Rev 5) standards.
- **FedRAMP Compliance:** For cloud services, ensure compliance with FedRAMP-approved security controls.
- **CIO Act Compliance:** Ensure IT systems meet operational and security requirements mandated by the CIO Act.
- **FITARA Compliance:** Ensure alignment with FITARA mandates for IT resource management.

8.0 Government-Furnished Equipment / Information

8.1 General Requirements

The Contractor maintains an inventory accounting system for all Government-Furnished Equipment (GFE), Government-Furnished Software (GFS), Government-Furnished Tools (GFT), and other Government-Furnished Information (GFI). This system must comply with FAR 52.245-1 (Government Property) and DOSAR 645.107 (Government Property Management). The inventory system must include, at a minimum:

- **Product Description:** Make, model, and specifications.
- **Government Tag Number:** Unique identifier for tracking.
- **Date of Receipt:** When the item was received.
- **Name of Recipient:** Individual or team assigned the item.
- **Location of Receipt:** Where the item was initially delivered.
- **Current Location:** Updated location of the item.
- **Purchase Cost:** If applicable, for Contractor Acquired Property (CAP).
- **Task Order Number:** Associated contract or task order under which the equipment is being used.

The Contractor shall attach an updated inventory report to each Monthly Status Report (MSR) and ensure the inventory listing is available for Government review within one business day of a request from the COR.

8.2 Government-Furnished Equipment and Services

The Government will provide workspace, furnishings, computer hardware and software, telephones, and other materials necessary for The Contractor to perform assigned tasks. All computer resources and equipment used at U.S. Government facilities will be Government-furnished and maintained by the Department of State.

Additionally, the Government may provide the following types of equipment and services to The Contractor's on-site support staff on a case-by-case basis, depending on individual task requirements and availability:

- **Office Space and Supplies:** If applicable, office space, desks, chairs, and other necessary furniture.
- **Computers and Network Access:** If applicable, PCs with network cards and access to Department systems, including Trouble Ticket Systems for troubleshooting and customer support.
- **Licensed Software:** If applicable, copies of project-required software, including updates and patches.
- **Utilities:** If applicable, adequate power, air conditioning, and office telephones with long-distance commercial access.
- **Printing and Copying:** If applicable, access to laser printers (individual or networked), copiers, shredders, and supplies for document management, including disposal of Privacy Act materials.
- **Mobile Devices:** If applicable, personal IT devices such as cell phones, iPhones, tablets, or other mobile access devices may be issued to individuals assigned to support the contract. Use and management of these devices will adhere to the Department of State policies and guidelines provided at the time of issuance.
- **Communication Tools:** If applicable, cellular phones, speakerphones for conference calls, and facsimile access for long-distance communication.

8.3 Management and Accountability

- **Ownership and Maintenance:** All GFE, GFS, and other property provided by the Government will remain the property of the Department of State. Contractors are responsible for ensuring proper use, safeguarding, and maintenance of all Government-furnished resources during the performance of their duties.
- **Return of Property:** All Government-furnished materials, data, or property must be returned upon completion of the contract.
- **Policies and Procedures:** Use and management of GFE, including mobile devices, will comply with Department of State policies, procedures, and guidelines in place at the time of issuance.
- **Audits and Reviews:** The Government reserves the right to conduct regular audits and reviews of the Contractor's inventory system to ensure compliance

with FAR, DOSAR, and DOSAM requirements. Any deficiencies identified must be promptly addressed by The Contractor.

8.4 Unique Items and Highlights

- **Mobile Access Devices:** DS may give mobile devices (e.g., cell phones, tablets) to Contractors on an individual basis. These devices will be managed under applicable Department of State policies, including security protocols and usage guidelines.
- **Privacy Act Materials:** Contractors must ensure proper disposal of sensitive materials using shredders or other approved methods.

8.5 Compliance Requirements

- **FAR Compliance:** FAR 52.245-1 -Establish and maintain accountability for Government property. FAR 52.245-5 - Ensure proper use and maintenance of Government property.
- **DOSAR Compliance:** DOSAR 645.107 - Adhere to Department of State property management policies.
- **DOSAM Compliance:** Align inventory systems and reporting with Department enterprise architecture standards.
- **Privacy Act Compliance:** Ensure proper handling and disposal of sensitive materials in accordance with federal privacy laws.

9.0 Standard Work Hours

The Department of State's normal work hours are Monday through Friday, 8:15 a.m. to 5:00 p.m., with a 45-minute lunch break, excluding federal holidays. Contractor personnel are required to work eight hours per day during these hours and must be present during core hours of 9:00 a.m. to 3:00 p.m. Telework may be authorized on an individual basis in accordance with DS policies, as approved by the CIO, vice DS/EX/CTO, or DS leadership. Any adjustments to the standard work hours, including overtime, extended hours, or after-hours on-call support, must be pre-approved in writing by the COR or GTM.

In cases where urgent operational requirements or mission-critical tasks necessitate work beyond standard hours, The Contractor shall ensure appropriate staffing and coordination to meet these needs. The Contractor is responsible for tracking and reporting work hours in accordance with Government procedures, and any

deviations from the agreed-upon schedule must be documented and justified. Compliance with all applicable labor laws and regulations governing work hours and conditions is required.

10.0 Place of Performance

The primary place of performance for this contract will be Department of State facilities located in the Washington, D.C. metropolitan area, including DS/EX/CTO offices at 1801 N. Lynn Street, Rosslyn, VA, and other annexes such as the Harry S Truman Building, SA-20, SA-15, SA-9, and DS training facilities like FASTC in Blackstone, VA. Work may also be authorized at The Contractor's facility, which must be located within 50 miles of the DS headquarters building in Rosslyn, VA, to support required in-person interactions with U.S. Government personnel. Additionally, the Contractor may be required to perform work at other domestic or international locations, including overseas diplomatic facilities, as determined by the COR or GTM. Any travel to alternate locations will be coordinated in advance and reimbursed in accordance with federal travel regulations.

Telework may be authorized on an individual basis in accordance with DS policies, as approved by the COR or GTM. The Contractor shall ensure that all telework arrangements comply with security, performance, and IT requirements, including adherence to Department data protection policies. The Contractor must remain flexible and prepared to adapt to changes in the place of performance based on operational needs or evolving mission requirements.

11.0 Security Requirements

The security classification guidance³ for classified information needed for this effort is identified below. If any difficulty is encountered in applying this guidance or if any other contributing Contractor indicates a need for changes in this guidance, the Contractor is authorized and encouraged to provide recommended changes; to challenge the guidance or the classification assigned to any information or material furnished or generated under this contract; and to submit any questions for interpretation of this guidance to the official identified below. Pending final decision,

³ SECURITY GUIDANCE. DD FORM 254, SECURITY GUIDANCE Page 4 of 6 Industrial Security Management System 19AQMM-24-C-0026

the information involved shall be handled and protected at the highest level of classification assigned or recommended.

11.1 Personnel Security Clearances

Contractor personnel assigned to this contract shall possess a TOP SECRET or SECRET personnel security clearance issued by the Defense Counterintelligence and Security Agency (DCSA) prior to contract performance. Personnel specifically designated by the COR must also be eligible for access to Sensitive Compartmented Information (SCI). A FINAL TOP SECRET clearance is required for access to SCI programs. Contractor personnel specifically designated by the COR will be required to have a Moderate Risk Public Trust (MRPT) determination conducted by the Bureau of Diplomatic Security.

All personnel must maintain their clearances for the duration of employment under this contract, and performance by uncleared individuals is strictly prohibited. Loss or downgrading of facility clearance at the TOP SECRET/COMSEC and SCI level, as outlined in the DD Form 254, will be grounds for termination of the contract for default.

Proposed subcontractors must be reviewed by DS/IS/IND prior to contract performance. The prime Contractor shall provide a current signed (by both parties) Subcontract Agreement (with subcontract number listed) between the entities outlining specific SOW to be performed by the subcontractor, to include all security requirements

All DD Forms 254 for proposed subcontractors required to provide cleared personnel shall be forwarded to DS/ IS/IND for generation and certification prior to issuance to the subcontractor and prior to access to any classified information or controlled access areas.

11.2 Facility Security Clearance

A TOP SECRET facility security clearance is required for contract performance in accordance with DD Form 254, Department of Defense Contract Security Classification Specification. All classified material received or generated during contract performance must be safeguarded and disposed of in accordance with the National Industrial Security Program Operating Manual (NISPOM) (DOD

5220.22-M) and applicable Department of State policies, including 12 FAM 500 and 12 FAM 600.

11.3 Visit Authorization Requests (VARs)

Visit Authorization Requests (VAR) are to be sent to Department of State (DOS), DS/IS/IND, Washington, DC 20520, via email: DS_IND_contraDS/EX/CTOrVARs@state.gov. A VAR is valid for 12 months; an updated VAR is required 30 days prior to the current VAR expiring.

11.4 Building Access and Identification

Contractor personnel requiring frequent and continuing access to Department of State facilities must obtain a Department of State building pass in accordance with Bureau of Diplomatic Security instructions.

DOS Personal Identification Card issuance procedures can be accessed at <https://usDOS.sharepoint.com/sites/DS-in/C/ST/SSI/NSM/IDM/OneBadge/SitePages/OneBadge.aspx>.

11.5 Handling Classified and Sensitive Information

While at DOS locations, the Contractor shall comply with applicable DOS regulations relative to the protection of classified and/or sensitive information, including the National Industrial Security Program Operating Manual (NISPOM) (32 CFR Part 117) and 12 FAM 500 and 600. DS/IS/IND is responsible for reviewing Contractor assigned to DOS locations. Security clearance requirements for Contractor accessing DOS domestic or overseas information systems shall be in accordance with 12 FAM 600. Furthermore, citizens of specifically designated human intelligence and/or technical intelligence threat countries shall not develop, modify, or perform maintenance on software developed for use on DOS computer systems without approval by DS/CTS.

Contractor's must comply with all applicable Department of State regulations regarding the protection of classified and sensitive information, including:

- **12 FAM 540:** Guidance on handling, access, dissemination, and release of Sensitive but Unclassified (SBU) information.
- **12 FAM 576:** Reporting adverse information concerning cleared contract employees.

- **12 FAM 275:** Reporting impending marriage, cohabitation, or other continuing bonds of affection with foreign nationals.
- **12 FAM 600:** Security clearance requirements for Contractor accessing DOS domestic or overseas information systems.

Classified storage is not required for performance on this contract; therefore, no discussion, storage, or generation of classified information should take place at the Contractor's facility. SBU Information: See 12 FAM 540 for guidance regarding Handling, Access, Dissemination, and Release of SBU All FAM references can be viewed on the DOS website, www.state.gov.

11.6 Foreign National Restrictions

Citizens of specifically designated human intelligence and/or technical intelligence threat countries shall not develop, modify, or perform maintenance on software developed for use on Department of State computer systems without approval by DS/CTS.

11.7 Mandatory Security Training

Contractor personnel must complete mandatory security awareness and role-based advanced security training annually, in accordance with Department of State, OMB Circular A-130, FISMA, and NIST guidelines.

11.8 Reporting Requirements

Contractor shall immediately report any adverse information concerning any cleared Contractor employees performing on DOS contracts to DCSA in accordance with the NISPOM and to DS/IS/IND in accordance with 12 FAM 576. Contractor personnel working on DOS contracts must report impending marriage, cohabitation and other continuing bonds of affection with foreign nationals to the COR and DS/IS/IND, in accordance with 12 FAM 275.

11.9 Compliance Requirements

Contract performance must adhere to the following:

- **FAR 52.204-2:** Security Requirements.
- **DD Form 254:** Department of Defense Contract Security Classification Specification.
- **NISPOM:** National Industrial Security Program Operating Manual (DOD 5220.22-M).

- **12 FAM Series:** Department of State policies on information security and technology.
- **DOSAR Compliance:** Follow DOSAR 604.404 and DOSAR 639.101 for security policies.
- **OMB Circular A-130:** Federal information resource management requirements.
- **FISMA:** Federal Information Security Modernization Act compliance.

11.10 Unique Items and Highlights

- **SCI Access:** Required for certain positions as identified by the COR or DS/EX/CTO.
- **SBU Information:** The Contractor must follow 12 FAM 540 for handling Sensitive but Unclassified information.
- **Policy Updates:** The Contractors are encouraged to recommend changes to security classification guidance and challenge classifications as needed, pending final decisions.

12.0 Travel

Travel may be required under this contract to support mission-critical tasks, including occasional domestic travel to Department of State or DoD-affiliated locations, such as those in West Virginia, and potentially overseas travel as authorized by the Government. Local travel within the Washington, D.C. commuting area is anticipated and will be reimbursed on a cost-reimbursement basis. All travel must be pre-approved by the COR and coordinated with the COR and CIO as applicable. The Contractor shall ensure that no travel-related costs are incurred without prior written authorization from the COR.

All travel and related expenses shall comply with the applicable Federal Travel Regulations (FTR) and Joint Travel Regulations (JTR), as well as the terms of the primary contract. Reimbursement for travel expenses will be receipt-based and subject to the guidelines outlined in the FTR/JTR. The Contractor is responsible for ensuring adherence to all travel policies, including obtaining necessary approvals and maintaining proper documentation for reimbursement. Overseas travel, although not anticipated, may be authorized if required by Government needs and will be subject to the same approval and reimbursement processes.

13.0 Point of Contact

The contractor submitting proposals shall provide a name and phone number for the POC, along with any subcontractor POC at time of submission. The COR will be the liaison between any designated GTM and the Contracting Officer responsible for coordinating contractual modifications and any required alterations or changes to the basic order. The Department of State COR will be the Certifying Official for invoices. The COR will also provide task order monitoring, task oversight and direction on administrative issues. The COR will be:

[INSERT NAME HERE]

U.S. Department of State
DS/EX/DS/EX/CTO
1801 N. Lynn Street – SA-20
Rosslyn, VA 22209
Commercial: (202) 769-3960

14.0 Funding

14.1 Contract Vehicle and Type

This contract will be Time and Material (T&M). The blanket T&M contract vehicle will provide flexible support to the DS/EX/CTO FO, with each division having separate CLINs for labor, travel, overtime, training, and other applicable services. This allows for precise funding, reporting, and task-level oversight throughout the PoP.

14.2 Invoice Approval

All invoices submitted under this contract must be reviewed and approved by the COR prior to submission for payment. For Time and Materials labor services, invoices must be supported by detailed time records or timecard reports. Any other direct costs must include prior U.S. Government (USG) approval and be accompanied by supporting documentation, such as receipts, to substantiate the expenses. The Contractor is responsible for ensuring that all invoices are accurate, complete, and comply with the terms of the contract.

To ensure accurate allocation of labor costs across multiple CTO projects, all contractors must track and report their hours worked by project. Each contractor will record their hours daily, through the IPP billing system of record, using project-

specific identifier provided by the Government. Monthly invoices must clearly identify the number of hours worked on each project, supported by detailed timesheets coded with the appropriate projects IDs, as part of the invoicing package. This process enables the Government to verify labor charges, confirm contractor effort aligns with project deliverables, and maintain full accountability for all billed hours. The contractor shall submit these invoices and supporting timesheets as part of the required monthly deliverables found in the [Performance Work Statement](#) section.

At the conclusion of the contract, closeout procedures will be initiated within 90 days, in accordance with FAR 42.708. The Contractor must submit a release of claims document through the designated IT system to finalize costs and resolve any outstanding invoiced amounts. This process does not preclude the Contractor right to collect funds for previously invoiced but unpaid amounts. All final costs and claims must be reconciled and documented as part of the contract closeout process.

14.3 Surge Activities

The Contractor shall provide scalable and adaptable surge capabilities to support development across multiple applications and projects simultaneously. Surge activities must ensure that ongoing support for other applications and task areas is not diminished or interrupted. This flexibility is critical to addressing urgent requirements, advancing technology, and meeting dynamic operational demands.

14.3.1 Key Requirements

- **Surge Contract Line-Item Number (CLIN):** The contract includes a dedicated Surge CLIN to accommodate immediate adjustments to staffing and services, ensuring rapid response to operational needs.
- **Real Time Staffing Adjustments:** The Contractor must promptly adjust staffing levels and resources to meet surge demands. Personnel must be capable of supporting multiple projects and divisions, ensuring continuity across all task areas.
- **Dedicated Talent:** The Contractor must have the ability to adjust staffing profiles and resources in real time to meet surge demands. Personnel must be capable of supporting multiple projects and divisions, rather than being limited to a single task area.

14.3.2 Surge Activation Protocol

To promote fiscal accountability and operational discipline, the Contractor shall adhere to the listed surge activation protocols. These measures ensure surge operations remain responsive, transparent, and cost controlled, while supporting mission critical needs without compromising other deliverables.

- **Pre-Approval Requirement:** Surge activities must be pre-approved in writing by the COR, with no retroactive approvals permitted.
- **Cost Thresholds:** A Not-to-Exceed (NTE) amount for surge activities shall be established per surge event and/or monthly, as agreed upon in the contract.
- **Response Timeframe:** The Contractor shall mobilize surge resources within 48 to 72 hours of receiving written COR approval.

14.3.3 Coordination and Approval

- **Pre-Approval Requirement:** All surge activities must be pre-approved in writing by the COR. Retroactive approvals are not permitted.
- **Documentation:** The Contractor must submit a written justification for each surge activation, detailing the operational need, scope of effort, expected duration, and projected costs. Documentation must comply with FAR (15.404 and 7.503), DOSA (642.1502), and DOSAM requirements.
- **Coordination:** Surge requirements will be coordinated with the COR and other designated management personnel to ensure alignment with contract terms and operational priorities.

14.3.4 Execution of Activities

- **Operational Discipline:** Surge activities must be executed efficiently and effectively, adhering to all contractual and regulatory requirements.
- **Efficient and Effective Execution:** Surge activities must be executed efficiently and effectively to meet urgent operational needs.

14.3.5 Compliance Monitoring and Reporting

The Contractor shall maintain detailed records of all surge activities, including resource allocation, costs, and work products, and submit a Surge Activity Report as part of the MSR. This report shall summarize surge hours billed, deliverables produced, and budget utilization against the approved surge ceiling. The COR reserves the right to request random audits of surge charges. Repeated non-compliance with surge protocols, including exceeding NTE amounts, lack of pre-

approvals, or failure to submit proper justifications—may result in invoice withholding, negative CPARS evaluations, or other contractual remedies in accordance with FAR 42.1503 and DOSAR 642.1502.

14.4 Other Direct Costs

Other Direct Costs (ODCs) are expenses directly tied to the performance of this contract but are not included in labor or indirect costs. These costs must be reasonable, allowable, and allocable under FAR, DOSAR, and DOSAM. ODCs may include equipment purchases, travel, training, and overtime, among other items.

14.4.1 Separate Contract Line-Item Numbers (CLINs)

To ensure proper tracking and accountability, ODCs will be categorized under separate CLINs for the following:

- **Labor:** Dedicated CLINs shall be established for labor categories under this contract. Labor CLINs represent the primary cost of contract performance and are separate from ODC CLINs, which are reserved for incidental costs such as equipment, travel, training, and overtime.
- **Travel:** Travel costs must be supported by receipts that include the type of flight, travel dates, traveler's full name, and total cost in US dollars. All travel must be pre-approved by the COR or designee.
- **Training:** Training costs, including user training, training materials, and documentation, must directly relate to the scope of work. Training costs incurred during IT systems development or implementation must be capitalized.
- **Overtime:** Overtime costs must be charged directly to the agency fund site of the requesting office or visitor. These costs cannot be included in shared administrative budgets, such as ICASS.

14.4.2 Documentation and Compliance

All ODCs must be pre-approved in writing by the COR. The COR must provide detailed documentation for all ODCs, including receipts, invoices, and cost justifications. Any costs incurred without prior approval may not be reimbursed. The Contractor is responsible for ensuring all ODCs comply with applicable FAR, DOSAR, and DOSAM regulations. Costs must be reasonable, allowable, and directly related to the contract. Any disallowed costs will not be reimbursed.

14.4.3 Monitoring and Reporting

The Contractor must maintain detailed records of all ODCs and include a summary in the MSR. This summary must include: ODC expenditures by category (equipment, travel, training, overtime), supporting documentation for each expense, and budget utilization against the approved ODC ceiling. The COR reserves the right to audit ODC charges at any time. Non-compliance with ODC requirements, including lack of pre-approval, missing documentation, or exceeding approved amounts, may result in invoice withholding, negative CPARS evaluations, or other contractual remedies.

14.5 Equipment Procurements

This contract will be established as a T&M vehicle, allowing the Bureau to procure toner, IT consumables, and Video Teleconference (VTC)-related equipment as needed throughout each performance period.⁴ In addition, this contract will include Order-Level Materials (OLM) authority, in accordance with GSAR 552.238-82 and FAR 8.403(b), permitting the acquisition of incidental materials and services directly supporting the installation, integration, or maintenance of IT and VTC systems. Thus, this contract will establish a vehicle for an Enterprise IT and Audio-Visual Consumables Contract with OLM Provisions.⁵ This combined structure provides the flexibility to consolidate multiple recurring Enterprise IT Components and AV supply requirements under a single, compliant vehicle, thus reducing administrative burden, leveraging economies of scale, and ensuring uninterrupted mission support. It aligns with FAR 16.601(c)(1), which permits the use of T&M contracts when the exact quantity of materials or level of effort cannot be predicted in advance, and supports the Department's objective to maintain secure annually operational communications and IT environments, worldwide.

14.5.1 Enterprise IT Component Upgrades and Replacement

The upgrades and replacements of Enterprise IT components under this T&M contract will align with the Department's IT acquisition policies, modular contracting principles, and FAR guidelines to ensure compliance, efficiency, and accountability.

⁴ This approach ensures flexibility in meeting dynamic operational requirements while maintaining compliance with the Bona Fide Needs Rule (31 U.S.C. §1502(a)), ensuring that only current year funding is used for bona fide annual needs.

⁵ These actions are consistent with FAR 7.105(b)(1)(v), which encourages consolidation and strategic sourcing to achieve cost efficiency and operations effectiveness, and FAR 8.405-3(a), which authorizes the establishment of consolidated supply and service procurements through GSA Schedule ordering procedures.

- **Scope of Upgrades and Replacements:** Enterprise IT component upgrades and replacements will include hardware, software, and peripheral devices necessary to maintain operational readiness and modernize IT infrastructure. This includes, but is not limited to: Servers, network equipment, storage devices, and end-user computing devices. AV and VTC systems, including microphones, displays, and control systems. IT consumables and components required for repair, replacement, or modernization of existing platforms.⁶
- **Performance Based Contracting:** Upgrades and replacements will be performance based, with clearly defined deliverables and performance standards. This ensures accountability and alignment with the Department's e-CPIC reporting requirements and IT modernization goals.
- **Modular Contracting Principles:** Modular contracting principles will be applied to ensure IT components are acquired in increments or useful segments of work. This approach supports timely delivery, reduces risks associated with large-scale acquisitions, and ensures compliance with FAR 39.103.⁷
- **Enterprise Agreements (EAs):** Where applicable, upgrades and replacements will leverage existing EAs, managed by DT/BMP/ITA/SSM. These agreements ensure cost efficiency, standardization, and compliance with Department-wide IT acquisition policies.
- **Security and Compatibility Requirements:** All IT components procured under this contract must meet the Department's security and compatibility standards, ensuring seamless integration with existing systems and adherence to cybersecurity protocols.

14.5.2 Order Level Material (OLM) Provisions

The OLM provisions will allow flexibility in procuring additional materials necessary for IT component upgrades and replacements as well as AV consumables. These provisions will adhere to GSAR 552.238-82 and FAR 8.403(b), ensuring compliance with thresholds and accountability.

- **Scope of OLM Items:** OLM items may include incidental materials and services directly supporting the installation, integration, or maintenance of IT and VTC

⁶ All upgrades must comply with FAR 11.105, ensuring solutions based and results oriented acquisitions rather than specifying brand names unless justified per FAR 11.105(b) or (c).

⁷ Contracts for increments must be awarded within 180 days of solicitation issuance, and delivery must occur within 18 months of contract award.

systems. Examples include: Cables, adapters, mounting kits, microphones, and other components required to maintain or repair Bureau communication and AV systems. Replacement parts for servers, network equipment, and storage devices. Consumables necessary for the operation and maintenance of IT and AV systems.

- **Threshold Compliance:** The total value of OLMs will not exceed 33.33% of the total order value, as stipulated in GSAR guidelines. This ensures that OLMs remain a supplemental procurement mechanisms rather than a primary one.
- **Request and Approval Process:** Requests for OLM items must be documented through a procurement request package, including a Bill of Materials (BOM) and justification for the additional resources. The process will align with the Department's procedures for requesting replacement parts and consumables through systems like the Computerized Maintenance Management System (CMMS).
- **Alignment with Modular Contracting:** OLM items will be procured in increments or useful segments of work, ensuring timely delivery and compliance with modular contracting principles.
- **Accountability and Reporting:** The procurement of OLM items must include appropriate metrics, reporting, and security requirements to ensure compliance with Department policies and FAR provisions.
- **Flexibility for Mission Support:** The OLM authority provides the flexibility to address unforeseen requirements for incidental materials and services, ensuring uninterrupted mission support and operational readiness.

Appendix A – ITOD Performance Work Statement

1.0 Introduction

This Performance Work Statement (PWS) supplements the Chief Technology Officer (CTO) Front Office (FO) Statement of Work (SOW) by focusing exclusively on the activities and deliverables required to assess, monitor, and manage contractor performance and the administration of the contract. While the SOW outlines the specific IT-related tasks, technical requirements, and deliverables expected from contractors, this PWS defines how the CTO FO will oversee and evaluate those efforts to ensure compliance, quality, and alignment with the SOW.

The PWS establishes the framework for tracking, reporting, and responding to contractor performance, with an emphasis on contract administration and project management. It provides a clear set of expectations for contractor deliverables related to administrative and management actions, as well as the processes for monitoring technical deliverables associated with agile methodologies and the Software Development Life Cycle (SDLC). It also establishes regular check ins with DS identified Government Technical Monitors (GTMs) to provide day to day technical oversight in project management and supplement and support CORs who manage contractual compliance.

In summary, the SOW specifies the IT management and technical tasks required of contractors, while the PWS focuses on the oversight mechanisms and performance metrics necessary to ensure those tasks are completed effectively and in accordance with contract requirements.

2.0 Performance Requirements

2.1 Administrative Deliverables and Actions

The Contractor shall provide deliverables that ensure efficient, accurate, and timely performance of all tasks in compliance with contract requirements, federal regulations, and Department of State policies. Deliverables must align with applicable standards, including FAR, DOSAR, DOSAM, FITARA, FISMA, CIO Act, PMI, and Agile methodologies, where relevant. All deliverables become Government property and must comply with Freedom of Information Act (FOIA) requirements unless marked proprietary and approved by the Government. Deliverables shall be submitted electronically using Microsoft Office Suite tools

unless otherwise specified by the Contracting Officer's Representative (COR). Hard copies may be requested by the COR.

The Contractor shall schedule and conduct a Project Kick-Off Meeting within seven business days of the contract start date, providing an agenda for COR approval three business days prior. Meeting minutes and action items shall be documented and submitted within five business days of the meeting. The Contractor shall also develop and maintain a Program Management Plan (PMP), Quality Assurance Plan (QAP), and other required plans, ensuring compliance with industry standards and Government expectations. These plans shall be reviewed and updated semi-annually or as needed. Transition activities shall ensure continuity of services during contract phase-in and phase-out periods.

2.1.1 Reports

- **Project Coded Timesheet and Invoice Submission:** The contractor shall submit a monthly invoice package that includes detailed timesheets from the IPP system of record for all T&M personnel (i.e., contractors). Each timesheet must clearly indicate the hours worked by each contractor, broken down by project using Government provided project identifiers. The invoice must summarize total hours and costs by project, matching timesheet data. The contractors will record their daily hours worked, assigning the correct project ID to each entry. At the end of each month, the Contractor will compile all timesheets and prepare an invoice that summarized hours and costs broken down by the project worked on. The contractor will submit the invoice and supporting timesheets to the COR for review and approval. The template for submitting will be up to the contractor, but must be approved by the COR.
- **Monthly Status Reports (MSR):** Use the template provided to provide a rollup of all activities, status, and next steps for the month, including financial updates, risk assessments, and personnel changes.
- **Weekly Status Reports (WSR):** Use the template provided to provide a rollup of all activities, status, and next steps for the week.
- **Quarterly In-Progress Reviews (IPRs):** Use the template provided to prepare and present the IPR using the provided template. The IPR allows contractors to present the status of their contracts to DS/EX/CTO. Ensures compliance with FAR 42.1503 (Contractor Performance Information) and DOSAR 642.1503.

- **After Action Reports (AARs):** Serves as an incident report for documenting outages, deployment/operational failures or non-conformances found with Audio/Visual or Video Teleconferencing System installations. Submit the AAR electronically to the FTE Lead for the FO Team and store it in the identified central repository for Contract Administrative Support Required Artifacts.
- **Meeting Minutes:** Use template to document agenda, attendees, topics, and actions.
- **Trip Reports:** Use template to document information related to any required trip to perform duties.
- **CTO Specific Template:** Utilize the CTO templates provided for presentations and documentation to be consistent with the quality management and standards set by DS/EX/CTO.

2.1.2 Project Plans

- **Program Management Plan (PMP):** Utilize the templates provided to document how contract support will perform. Ensure the PMP tracks all aspects of project execution and aligns with contract objectives. Must include the following plans: **Resource Plan, Communications Plan, Risk Plan, Knowledge Management Plan, Quality Assurance Plan (QAP), Quality Assurance Surveillance Plan (QASP), Activity/Task Plans, IT Security Plan, Continuity of Operations Plan (COOP), Change Management Plan, and Transition Plan.**
- **Action Memo for COR on Task Order:** Use this template to bring up any official action items to be addressed by the COR on specific activities, risks, updates per Task Order on the contract for performance and metrics reporting purposes.

2.2 Technical Agile and Software Development Lifecycle (SDLC) Deliverables and Actions

The contractor shall follow industry-standard Agile methodologies, such as SCRUM, KANBAN, Lean, and Extreme Programming (XP), to deliver software products and services in small, incremental releases that maximize business value. The contractor shall apply scaled Agile practices to coordinate multiple teams, manage dependencies, mitigate risks, and ensure collaboration across efforts.

The Contractor shall comply with the Department of State's Managing State Projects (MSP) framework, as outlined in 5 FAH-5 H-210, and the CTO's tailored Agile CTO Project Life Cycle (Agile PLC). The Contractor shall integrate required phases, activities, deliverables, and control gates into project plans for all efforts under this contract.

Before starting any project, the contractor shall complete a Project Tailoring Review Form (PTRF) to identify applicable components based on the project's size, scope, and complexity. The PTRF must be submitted for government approval prior to initiating work. The Contractor shall adhere to guidelines from recognized standards organizations, including PMI, SEI, ISO, and ITIL, and ensure compliance with all applicable CTO policies and procedures.

The following are actions and artifacts that are required as part of the Contractor's responsibility for performing IT related work with DS/EX/CTO FO, *as applicable*. Any custom developed programming code generated must be provided in its raw, digital, un-compiled format, to the TPOC or designee for quality inspection and archival purposes.

- **Portfolio Intake Dashboard:** Receive access and rights to track initiatives, technical debt, and resource capacities.
- **Agile Process Training Report:** Use the template required to request and track training.
- **Implementation Plan:** Use the template to document all actions needed to implement project activities.
- **Project Request Procedure:** Use the template to document all requirements to request a project to start.
- **Product Backlog:** Use the template to document all tasks/activities that are required for the ongoing sprint and Program Increment.
- **Proof of Passing Quality Control Gates:** Use the template to plan and action on each CTO quality control gate during the projects lifecycle.
- **CTO SDLC:** Use the document to understand CTOs SDLC processes to emulate while performing contractual work.
- **CTO Agile Product Lifecycle:** Use the document to understand CTOs Agile Product Lifecycle processes to emulate while performing contractual work.

- **Project Requirements Document and Review:** Use the template to gather project requirements for review and creation of project plans and project request procedures used at CTO.
- **Project Plan:** Use the template to create project plans for each project performed, both IT and non-IT related.
- **Project Closure Checklist:** Use the document to emulate the CTO process for closing out all projects.

3.0 PWS Deliverables/Delivery Schedule

All deliverables must be submitted electronically using Microsoft Office Suite tools unless otherwise specified in SLAs or by your direct report. Hard copies may be requested by the COR. Deliverables must adhere to the timeline specified in the contract, ensuring compliance with FAR, DOSAR, and DOSAM requirements. Deliverables shall adhere to the following timelines:

Table 2 PWS Deliverable Schedule

Deliverable	Template	Due Date	Frequency	Recipient
Reporting Deliverables				
Project Coded Timesheet and Invoice Submission	At Contractor Discretion	No later than the 5 th business day of the following month	Monthly	COR, CO
MSR	Template	By the 10th of the month	Monthly	COR, GTM, and other stakeholders
WSR	Template	By noon on the first business day of following week	Weekly	COR, GTM, and other stakeholders
IPR	Template	During the 1st week following the end of each quarter	Quarterly	COR, GTM, and other stakeholders
AAR	Template SharePoint	Within 72 hours of any unscheduled availability impact	As needed	FTE Lead and SharePoint List

4.0 Acceptance Criteria and Compliance Standards

Refer to the [ITOD SOW Section 6.0 Acceptance Criteria and Compliance Standards](#) for all instructions regarding the required actions and deliverables.

5.0 Adherence to Policy or Standards

Refer to the [ITOD SOW Section 7.0 Adherence to Policy or Standards](#) for all instructions regarding the required actions and deliverables.

6.0 Point of Contact

Refer to the [ITOD SOW Section 13.0 Point of Contact](#).

Appendix B – Required Resources and Position Descriptions

This section outlines the resources, position descriptions, and labor categories required to fulfill the contract's objectives. It provides a detailed required resource table (Table 3) that identifies each position and aligns each position with its corresponding labor category. Each position description (PD) includes a clear summary of the role's responsibilities, required qualifications, certifications, and skills, ensuring alignment with the contract's scope and federal standards. This structured approach ensures transparency, consistency, and a shared understanding of the expertise and capabilities needed to successfully execute the contract.

Table 3 Required Resources

Title	Quantity	Location	Labor Category
<u>AV Specialist</u>	5	AVU	(2) Audio-Visual Specialist II** (2) Jr. Audio Visual Technician (1) Sr. Audio Visual Technician

Position Descriptions

AV Specialist

The **Audio Visual (AV) Specialist Level II** provides intermediate-level technical expertise in the setup, operation, maintenance, and troubleshooting of audio-visual systems and equipment. This role supports the delivery of high-quality AV services for meetings, conferences, and events, ensuring seamless integration of AV technologies to meet client needs. The Level II Specialist works under general supervision and may assist in training junior staff. The **Junior Audio Visual (AV)**

Technician provides advanced technical expertise and leadership in the design, implementation, and management of complex AV systems. This role ensures the successful execution of high-profile events and projects, often serving as the primary technical advisor for AV solutions. The Level III Specialist mentors junior staff and collaborates with stakeholders to deliver innovative AV services. The **Audio Visual (AV) Specialist SME/Principal** is a senior-level expert responsible for providing strategic guidance, technical leadership, and innovative solutions for enterprise-wide AV systems and services. This role involves advising senior leadership, managing large-scale AV projects, and ensuring the alignment of AV technologies with organizational goals. The SME/Principal serves as a thought leader in the AV field and drives continuous improvement in AV capabilities.

Major Duties and Responsibilities

[Audio Visual (AV) Specialist Level II] Set up, operate, and troubleshoot AV equipment, including projectors, microphones, video conferencing systems, and control systems. Provide on-site technical support during meetings, events, and conferences to ensure smooth AV operations. Perform routine maintenance and testing of AV systems to ensure functionality and reliability. Assist in the installation and configuration of AV hardware and software. Collaborate with event organizers to determine AV requirements and provide tailored solutions. Maintain inventory of AV equipment and ensure proper storage and handling. Document AV system configurations, maintenance activities, and troubleshooting steps. Train end-users on the proper use of AV equipment and systems. Stay updated on emerging AV technologies and recommend upgrades or improvements. Support remote and hybrid meeting setups, including virtual platform integration. **[Audio Visual (AV) Specialist Level III]** Lead the design, installation, and configuration of advanced AV systems for large-scale events and projects. Serve as the primary technical point of contact for AV-related inquiries and issues. Manage and oversee the operation of AV systems during high-profile meetings, conferences, and events. Develop and implement AV system standards, policies, and best practices. Conduct advanced troubleshooting and resolve complex AV technical issues. Provide technical training and mentorship to junior AV staff. Collaborate with IT teams to integrate AV systems with enterprise networks and platforms. Evaluate and recommend new AV technologies to enhance service delivery. Prepare detailed documentation, including system diagrams, user guides, and maintenance logs. Ensure compliance with

federal accessibility and security standards for AV systems. Provide strategic direction and technical expertise for enterprise AV initiatives. **[Audio Visual (AV) Specialist SME/Principal]** Lead the planning, design, and implementation of cutting-edge AV systems and solutions. Serve as a trusted advisor to senior leadership on AV strategy, investments, and innovations. Oversee the execution of large-scale AV projects, ensuring quality, timeliness, and budget adherence. Develop and enforce enterprise-wide AV policies, standards, and best practices. Conduct high-level troubleshooting and root cause analysis for critical AV issues. Represent the organization in industry forums and maintain relationships with AV vendors and partners. Drive research and adoption of emerging AV technologies to enhance organizational capabilities. Mentor and develop AV staff, fostering a culture of technical excellence and innovation. Ensure compliance with all federal regulations, including accessibility, security, and procurement standards.

Professional Qualifications/Skills

[Audio Visual (AV) Specialist Level II] Associate's degree in a related field or equivalent technical training; certifications such as CTS (Certified Technology Specialist) preferred. 3–5 years of experience in AV operations, including setup, maintenance, and troubleshooting. Proficiency in operating AV control systems (e.g., Crestron, Extron, AMX). Strong understanding of video conferencing platforms (e.g., Zoom, Microsoft Teams, Webex). Knowledge of AV signal flow, cabling, and connectivity standards. Ability to work under pressure and resolve technical issues in real-time. Excellent communication and customer service skills. Familiarity with AV system design and integration is a plus. Ability to lift and transport AV equipment as needed. Strong organizational skills and attention to detail. **[Audio Visual (AV) Specialist Level III]** Bachelor's degree in a related field or equivalent experience; advanced certifications such as CTS-D or CTS-I preferred. 5–7 years of experience in AV system design, installation, and management. Expertise in AV control systems, video conferencing platforms, and digital signal processing. Strong project management skills, including the ability to lead cross-functional teams. In-depth knowledge of AV standards, protocols, and emerging technologies. Proven ability to manage multiple projects and meet tight deadlines. Excellent problem-solving and analytical skills. Strong interpersonal and communication skills, with the ability to interact effectively with senior stakeholders. Experience with federal government AV requirements and standards is a plus. Ability to obtain and maintain

security clearance if required. **[Audio Visual (AV) Specialist SME/Principal]** Master's degree in a related field or equivalent experience; advanced certifications such as CTS-D, CTS-I, or PMP highly desirable. 10+ years of experience in AV systems design, management, and strategic planning. Recognized expertise in AV technologies, including control systems, video conferencing, and digital media. Demonstrated ability to lead enterprise-wide AV initiatives and manage large, complex projects. Strong understanding of federal government AV requirements, procurement processes, and compliance standards. Exceptional leadership, communication, and stakeholder engagement skills. Proven track record of driving innovation and delivering measurable results in AV services. Experience with budgeting, resource allocation, and vendor management. Ability to influence and collaborate with senior executives and cross-functional teams. Active security clearance or ability to obtain one if required.

AV Technician

The Audio Visual (AV) Technician provides entry-level technical support for the setup, operation, and maintenance of audio-visual systems and equipment. This role focuses on assisting with basic AV tasks, ensuring smooth functionality during meetings, events, and conferences. The AV Technician works under close supervision and follows established procedures to deliver reliable AV services.

Major Duties and Responsibilities

Assist in the setup and operation of AV equipment, including microphones, projectors, displays, and speakers. Provide basic troubleshooting for AV systems and escalate complex issues to higher-level specialists. Support video conferencing and virtual meeting platforms by ensuring proper connectivity and functionality. Perform routine checks and maintenance of AV equipment to ensure readiness for use. Help with the installation and configuration of AV hardware and software under supervision. Maintain accurate records of AV equipment inventory and usage. Provide basic guidance to end-users on operating AV systems and equipment. Assist in preparing meeting rooms and event spaces for AV requirements. Follow organizational policies and procedures for AV operations and security. Stay informed about basic AV technologies and tools to improve service delivery.

Professional Qualifications/Skills

High school diploma or equivalent; technical training or certifications (e.g., CTS) preferred. 1–2 years of experience in AV operations or related technical support roles. Basic understanding of AV equipment, including projectors, microphones, and video conferencing systems. Familiarity with common virtual meeting platforms (e.g., Zoom, Microsoft Teams, Webex). Ability to follow instructions and work effectively under supervision. Strong attention to detail and organizational skills. Good communication and customer service skills. Ability to lift and transport AV equipment as needed. Willingness to learn and adapt to new AV technologies. Basic problem-solving skills and ability to work in a team environment.

Cloud Engineer

The Cloud Engineer is a senior technical expert responsible for designing, implementing, and managing complex cloud-based systems and solutions. This role requires advanced knowledge of cloud platforms, infrastructure, and services to ensure secure, scalable, and efficient operations. The Cloud Engineer collaborates with stakeholders to align cloud strategies with organizational goals, leads technical teams, and provides guidance on best practices for cloud architecture and operations.

Major Duties and Responsibilities

Design and implement advanced cloud architectures and solutions tailored to organizational needs. Lead the migration of on-premises systems to cloud environments, ensuring minimal disruption. Manage and optimize cloud infrastructure for performance, scalability, and cost-efficiency. Develop and enforce cloud security policies, ensuring compliance with federal standards. Automate cloud operations using Infrastructure as Code (IaC) tools and methodologies. Monitor and troubleshoot cloud systems to ensure high availability and reliability. Provide technical leadership and mentorship to junior cloud engineers and team members. Collaborate with cross-functional teams to integrate cloud solutions with existing systems. Stay updated on emerging cloud technologies and recommend innovative solutions. Prepare technical documentation and reports for stakeholders and leadership.

Professional Qualifications/Skills

Advanced knowledge of major cloud platforms (e.g., AWS, Azure, Google Cloud). Proficiency in cloud architecture frameworks and best practices. Expertise in Infrastructure as Code (IaC) tools such as Terraform, CloudFormation, or Ansible. Strong understanding of cloud security principles and federal compliance standards.

(e.g., FedRAMP, FISMA). Experience with containerization and orchestration tools (e.g., Docker, Kubernetes). Proven ability to lead large-scale cloud migration and modernization projects. Strong analytical and problem-solving skills for troubleshooting complex cloud issues. Excellent communication and collaboration skills to work with diverse stakeholders. Relevant certifications such as AWS Certified Solutions Architect, Microsoft Azure Solutions Architect, or Google Cloud Professional Architect. Minimum of 8-10 years of experience in cloud engineering or related fields.

Database Administrator

The Database Administrator is responsible for leading the design, implementation, and optimization of complex database systems to support organizational goals. This role involves advanced technical expertise, leadership, and collaboration with stakeholders.

Major Duties and Responsibilities

Lead the design and implementation of advanced database systems. Develop and enforce best practices for database management and optimization. Collaborate with stakeholders to align database systems with organizational goals. Conduct system assessments and recommend improvements. Implement security measures to protect database systems. Document system architectures, configurations, and best practices. Ensure compliance with security and regulatory standards. Stay updated on emerging database tools and technologies. Represent database administration in strategic planning and decision-making. Mentor junior administrators and provide technical guidance.

Professional Qualifications/Skills

Bachelor's or Master's degree in IT, Computer Science, or a related field. 7–12 years of experience in database administration or management. Expertise in database systems (e.g., MySQL, SQL Server, Oracle). Advanced knowledge of database query languages (e.g., SQL, PL/SQL). Strong leadership and mentoring skills. Certifications such as Microsoft Certified: Azure Database Administrator Expert or Oracle Database Administrator Professional preferred. Excellent problem-solving and critical-thinking abilities. Familiarity with cloud-based database solutions (e.g., AWS RDS, Azure SQL Database). Exceptional communication and stakeholder management skills. Experience with emerging technologies (e.g., AI, IoT) is a plus.

Database Architect

A Database Architect is a senior-level expert responsible for designing, implementing, and managing complex database systems to support organizational needs. This role involves creating scalable, secure, and efficient database architectures, optimizing data storage and retrieval processes, and ensuring compliance with federal standards. The Database Architect collaborates with stakeholders to align database solutions with business objectives, leads database modernization efforts, and provides technical leadership to teams.

Major Duties and Responsibilities

Design and implement advanced database architectures to support large-scale systems and applications. Develop strategies for database optimization, scalability, and performance tuning. Lead database migration and modernization projects, including transitioning legacy systems to modern platforms. Ensure database security and compliance with federal regulations (e.g., FISMA, FedRAMP). Create and maintain data models, schemas, and documentation for efficient data management. Implement disaster recovery and backup solutions to ensure data integrity and availability. Monitor and troubleshoot database systems to identify and resolve performance issues. Collaborate with cross-functional teams to integrate databases with other IT systems. Provide technical leadership and mentorship to database administrators and junior architects. Stay updated on emerging database technologies and recommend innovative solutions.

Professional Qualifications/Skills

Advanced knowledge of database management systems (e.g., Oracle, SQL Server, PostgreSQL, MongoDB). Expertise in database design principles, data modeling, and normalization techniques. Proficiency in database performance tuning and optimization strategies. Strong understanding of database security protocols and federal compliance standards. Experience with cloud-based database solutions (e.g., AWS RDS, Azure SQL Database, Google Cloud Spanner). Proven ability to lead large-scale database migration and modernization projects. Familiarity with data integration tools and ETL processes. Excellent analytical and problem-solving skills for complex database challenges. Relevant certifications such as Oracle Certified Master, Microsoft Certified: Azure Data Engineer, or AWS Certified Database Specialty. Minimum of 8-10 years of experience in database architecture or related fields.

Deskside Engineer

The Deskside Engineer is an entry-level professional responsible for providing technical support and troubleshooting assistance to end-users. This role focuses on resolving basic IT issues, managing service requests, and ensuring users can effectively utilize IT systems and applications. The Deskside Engineer serves as the first point of contact for technical support, escalating complex issues to higher-level support teams as needed, and maintaining detailed records of service interactions.

Major Duties and Responsibilities

Respond to and resolve basic IT support requests via phone, email, or ticketing systems. Troubleshoot hardware, software, and network connectivity issues for end-users. Provide guidance on the use of IT systems, applications, and tools. Document and track service requests, resolutions, and user interactions in a ticketing system. Escalate unresolved or complex issues to higher-level support teams. Assist with the setup, configuration, and maintenance of end-user devices such as desktops, laptops, and peripherals. Perform routine system checks and updates to ensure functionality and security. Support onboarding processes by configuring accounts and devices for new users. Maintain knowledge of organizational IT policies and procedures to ensure compliance. Deliver excellent customer service and maintain professionalism in all user interactions.

Professional Qualifications/Skills

Basic understanding of IT systems, hardware, software, and networking concepts. Familiarity with common operating systems (e.g., Windows, macOS) and productivity tools (e.g., Microsoft Office Suite). Strong problem-solving and troubleshooting skills for resolving technical issues. Excellent communication and interpersonal skills to assist non-technical users. Ability to manage multiple service requests and prioritize tasks effectively. Experience with ticketing systems and documentation of support activities. Knowledge of basic cybersecurity practices and safe computing principles. Customer service orientation with a focus on user satisfaction. Relevant certifications such as CompTIA IT Fundamentals (ITF+) or A+ are preferred. Minimum of 1-2 years of experience in IT support or a related field.

Desktop Support

The Desktop Support is a senior-level IT professional responsible for providing advanced technical support and troubleshooting for end-user devices, software, and

network connectivity. This role involves resolving complex technical issues, managing escalations, and ensuring the smooth operation of IT systems in both office and field environments. The Desktop Support individual also plays a key role in mentoring junior staff, implementing IT best practices, and supporting the deployment of new technologies.

Major Duties and Responsibilities

Provide advanced troubleshooting and resolution for hardware, software, and network issues on desktops, laptops, mobile devices, and peripherals. Manage escalated technical support tickets and ensure timely resolution in alignment with service level agreements (SLAs). Install, configure, and maintain operating systems, applications, and security updates on end-user devices. Support the deployment, imaging, and setup of new hardware and software across the organization. Perform root cause analysis for recurring technical issues and recommend long-term solutions. Collaborate with IT teams to support system upgrades, migrations, and rollouts. Document technical processes, solutions, and user guides to improve knowledge sharing and efficiency. Provide on-site and remote support for field operations, including troubleshooting connectivity and equipment issues in remote locations. Mentor and train junior technicians to enhance team capabilities and knowledge. Ensure compliance with organizational IT policies, security protocols, and data protection standards.

Professional Qualifications/Skills

Bachelor's degree in Information Technology, Computer Science, or a related field (or equivalent experience). Minimum of 5 years of experience in desktop support, field services, or a related IT role. Advanced knowledge of Windows, macOS, and mobile operating systems, as well as common productivity software (e.g., Microsoft Office 365). Strong understanding of networking concepts, including TCP/IP, DNS, VPNs, and wireless connectivity. Experience with IT service management (ITSM) tools, such as ServiceNow or Remedy, for ticket tracking and resolution. Familiarity with imaging tools and deployment technologies, such as SCCM, Intune, or MDT. Excellent problem-solving skills and the ability to work independently in high-pressure environments. Strong communication and interpersonal skills to effectively interact with end users and team members. Relevant certifications, such as CompTIA A+, Network+, or Microsoft Modern Desktop Administrator, are highly

desirable. Ability to travel to field locations as needed and provide on-site technical support.

Desktop Technician

The Desktop Technician provides technical support for end-user computing devices, including desktops, laptops, and peripherals. They are responsible for troubleshooting hardware and software issues, performing installations and upgrades, and ensuring systems operate efficiently. This Desktop Technician has strong customer service skills, attention to detail, and the ability to work in a fast-paced environment to resolve technical problems promptly.

Major Duties and Responsibilities

Provide technical support for desktop, laptop, and peripheral devices, including printers and scanners. Diagnose and resolve hardware and software issues for end-users. Install, configure, and maintain operating systems, applications, and security updates. Perform routine maintenance and upgrades to ensure optimal system performance. Respond to service requests and incidents through ticketing systems, ensuring timely resolution. Assist with onboarding and offboarding processes, including device setup and data migration. Maintain inventory of IT equipment and track asset assignments. Collaborate with other IT teams to address network connectivity and system integration issues. Document troubleshooting steps and resolutions for knowledge base updates. Provide training and guidance to end-users on basic IT practices and tools.

Professional Qualifications/Skills

Associate degree in Information Technology, Computer Science, or related field (or equivalent experience). CompTIA A+ certification or equivalent technical certification preferred. Proficiency in Windows and macOS operating systems, as well as common productivity software (e.g., Microsoft Office Suite). Strong troubleshooting and problem-solving skills for hardware and software issues. Familiarity with IT service management (ITSM) tools and ticketing systems. Excellent communication and customer service skills to interact effectively with end-users. Ability to prioritize tasks and manage time effectively in a fast-paced environment. Experience with Active Directory for user account management and permissions. Knowledge of basic networking concepts, including IP addressing and Wi-Fi troubleshooting. Ability to lift and transport IT equipment as needed (e.g., desktops, monitors, printers).

Firewall Engineer

[Network Engineer Level II] The Network Engineer Level II is a mid-level IT professional responsible for designing, implementing, and maintaining network systems to ensure reliable and secure connectivity across the organization. This role involves troubleshooting complex network issues, optimizing performance, and supporting the deployment of new network technologies. The Level II engineer collaborates with IT teams to ensure the network infrastructure meets organizational needs and complies with security standards. **[Network Engineer Level III]** The Network Engineer Level III is a senior IT professional responsible for leading the design, implementation, and management of complex network systems. This role involves resolving high-level network issues, optimizing infrastructure for scalability, and ensuring compliance with security and performance standards. The Level III engineer provides strategic guidance, mentors junior staff, and plays a key role in planning and executing enterprise-level network projects.

Major Duties and Responsibilities

[Network Engineer Level II] Design, configure, and maintain network systems, including LANs, WANs, and wireless networks. Troubleshoot and resolve complex network issues to minimize downtime and disruptions. Monitor network performance and implement optimizations to improve reliability and efficiency. Support the deployment and integration of new network technologies and upgrades. Configure and manage network security tools, such as firewalls, VPNs, and intrusion detection systems. Document network configurations, processes, and troubleshooting procedures. Conduct regular audits of network systems to ensure compliance with organizational policies. Collaborate with IT teams to integrate network systems with other enterprise technologies. Provide technical guidance and support to junior network engineers and IT staff. Stay updated on emerging networking technologies and recommend improvements to the infrastructure. **[Network Engineer Level III]** Design and implement advanced network architectures to support organizational goals and scalability. Lead the planning and execution of network upgrades, migrations, and expansions. Perform advanced troubleshooting and root cause analysis for critical network issues. Optimize network performance and scalability through proactive monitoring and adjustments. Develop and enforce network policies, procedures, and security protocols. Manage the lifecycle of network hardware and software, including procurement and upgrades.

Collaborate with stakeholders to assess and address long-term network requirements. Document network designs, configurations, and operational procedures for knowledge sharing. Mentor and train junior engineers to build team expertise and capabilities. Ensure compliance with federal IT security standards, such as FISMA, NIST, and other applicable regulations.

Professional Qualifications/Skills

[Network Engineer Level II] Bachelor's degree in Information Technology, Computer Science, or a related field (or equivalent experience). Minimum of 3 years of experience in network engineering or a related IT role. Proficiency in networking protocols, such as TCP/IP, BGP, OSPF, and VLANs. Experience with network hardware, including routers, switches, and firewalls. Strong understanding of network security principles and tools. Familiarity with network monitoring and management tools, such as SolarWinds or Cisco Prime. Relevant certifications, such as Cisco Certified Network Associate (CCNA) or CompTIA Network+, are preferred. Excellent problem-solving and analytical skills. Ability to work independently and manage multiple tasks effectively. Strong communication skills to interact with technical and non-technical stakeholders. **[Network Engineer Level III]** Bachelor's degree in Information Technology, Computer Science, or a related field (or equivalent experience). Minimum of 7 years of experience in network engineering or a related IT role. Expertise in advanced networking protocols, such as MPLS, BGP, and QoS. Proficiency in managing enterprise-level network hardware and software. Strong understanding of network security frameworks and tools, including firewalls and intrusion detection systems. Experience with cloud networking solutions, such as AWS or Azure. Relevant certifications, such as Cisco Certified Network Professional (CCNP) or Juniper Networks Certified Professional (JNCP), are highly desirable. Excellent leadership, communication, and project management skills. Ability to work independently and lead cross-functional teams in high-pressure environments. Strong analytical skills to assess and improve network performance and reliability.

Help Desk Manager

[Help Desk Manager Level I] The Help Desk Manager Level I is an entry-level management professional responsible for overseeing the daily operations of a help desk team. This role focuses on ensuring timely and effective resolution of end-user technical issues, monitoring ticket workflows, and maintaining customer satisfaction.

The Level I manager works closely with IT leadership to implement help desk policies, train staff, and ensure adherence to service level agreements (SLAs). **[Help Desk Manager Level III]** The Help Desk Manager Level III is a senior-level management professional responsible for leading and optimizing the operations of an organization's help desk. This role involves strategic planning, managing a team of technicians, and ensuring the delivery of high-quality IT support services. The Level III manager oversees the development of help desk policies, implements advanced tools and processes, and ensures alignment with organizational goals and SLAs.

Major Duties and Responsibilities

[Help Desk Manager Level I] Supervise the daily operations of the help desk team, ensuring timely resolution of support tickets. Monitor ticket queues and assign tasks to team members based on priority and expertise. Provide first-line escalation support for unresolved or complex technical issues. Train and mentor help desk staff to improve technical skills and customer service. Track and report on help desk performance metrics, such as response times and resolution rates. Ensure compliance with SLAs and organizational policies for IT support. Maintain documentation of help desk processes, procedures, and troubleshooting guides. Collaborate with IT teams to escalate and resolve system-wide issues. Assist in the implementation of new help desk tools and technologies. Foster a positive and professional work environment to enhance team performance. **[Help Desk Manager Level III]** Lead and manage the help desk team, ensuring efficient and effective IT support services. Develop and implement help desk policies, procedures, and best practices to improve service delivery. Monitor and analyze help desk performance metrics to identify trends and areas for improvement. Oversee the resolution of escalated technical issues and ensure customer satisfaction. Collaborate with IT leadership to align help desk operations with organizational goals. Manage the deployment and optimization of help desk tools, such as ticketing systems and knowledge bases. Ensure compliance with SLAs, security policies, and regulatory requirements. Provide strategic guidance and mentorship to help desk staff, fostering professional growth. Prepare and present reports on help desk performance and initiatives to senior leadership. Stay updated on emerging IT support technologies and recommend improvements to help desk operations.

Professional Qualifications/Skills

[Help Desk Manager Level I] Bachelor's degree in Information Technology, Computer Science, or a related field (or equivalent experience). Minimum of 2 years of experience in IT support or help desk operations. Strong understanding of help desk tools and ticketing systems, such as ServiceNow or Zendesk. Basic knowledge of IT systems, including Windows, macOS, and common productivity software. Excellent communication and interpersonal skills to interact with end users and team members. Strong organizational and time management skills to handle multiple priorities. Experience in training and mentoring staff is preferred. Familiarity with ITIL or other IT service management frameworks is a plus. Relevant certifications, such as CompTIA A+ or ITIL Foundation, are desirable. Ability to work in a fast-paced environment and adapt to changing priorities.

[Help Desk Manager Level III] Bachelor's degree in Information Technology, Computer Science, or a related field (or equivalent experience). Minimum of 7 years of experience in IT support, with at least 3 years in a management role. Expertise in help desk tools and ticketing systems, such as ServiceNow, Zendesk, or Jira Service Management. Strong understanding of IT systems, including operating systems, networks, and enterprise applications. Proven ability to lead and manage teams in a fast-paced, high-pressure environment. Experience with ITIL or other IT service management frameworks; ITIL certification is highly desirable. Excellent problem-solving, communication, and leadership skills. Strong analytical skills to assess performance metrics and drive continuous improvement. Relevant certifications, such as HDI Support Center Manager or CompTIA Project+, are preferred. Ability to develop and implement strategic initiatives to enhance IT support services.

Help Desk Support (Part Time)

The Help Desk Support (**Part Time**) professional provides technical assistance to end-users, addressing IT-related issues such as software, hardware, and network problems. The Help Desk Support involves responding to service requests, troubleshooting problems, and ensuring users can access and utilize systems effectively. Part-time Help Desk Support personnel are critical for maintaining operational continuity during peak hours or specific shifts, offering flexible and reliable support.

Major Duties and Responsibilities

Respond to user inquiries and service requests via phone, email, or ticketing systems. Troubleshoot and resolve basic hardware, software, and network connectivity issues.

Provide guidance to users on system functionality and best practices. Escalate complex issues to higher-level support teams or specialists as needed. Document service requests, resolutions, and troubleshooting steps in the ticketing system. Assist with password resets, account unlocks, and basic user account management. Support the installation and configuration of software applications. Maintain knowledge base articles and user guides for common issues. Monitor and report recurring issues to identify trends and recommend solutions. Provide excellent customer service to ensure user satisfaction and productivity.

Professional Qualifications/Skills

High school diploma or equivalent; some college coursework in IT or related field preferred. Basic understanding of computer systems, software applications, and networking principles. Experience with IT service management (ITSM) tools and ticketing systems. Strong communication and interpersonal skills to interact effectively with users. Ability to troubleshoot and resolve common IT issues independently. Familiarity with Windows and macOS operating systems. Customer service experience, preferably in a technical support role. Ability to work flexible hours, including evenings or weekends, as required. Detail-oriented with strong organizational skills for tracking and documenting issues. Willingness to learn and adapt to new technologies and processes.

Infrastructure Engineer / Facility Engineer

An Infrastructure Engineer / Facility Engineer Subject Matter Expert (SME) is responsible for designing, implementing, and maintaining critical infrastructure systems that support an organization's IT and operational needs. The Facility Engineer involves expertise in physical and virtual infrastructure, including data centers, power systems, HVAC, and network connectivity. The SME ensures that facilities and IT infrastructure are reliable, scalable, and aligned with organizational goals, while also addressing compliance, security, and efficiency requirements.

Major Duties and Responsibilities

Design, implement, and maintain IT infrastructure systems, including servers, storage, and network components. Oversee the operation and maintenance of physical facilities, such as data centers, HVAC systems, and power distribution. Conduct capacity planning to ensure infrastructure scalability and reliability. Develop and implement disaster recovery and business continuity plans for critical

systems. Monitor infrastructure performance and address issues to minimize downtime. Ensure compliance with federal regulations, industry standards, and security protocols. Collaborate with stakeholders to align infrastructure solutions with organizational objectives. Provide technical expertise for infrastructure upgrades, migrations, and new installations. Manage vendor relationships and oversee contracts for facility and infrastructure services. Document infrastructure designs, configurations, and maintenance procedures.

Professional Qualifications/Skills

Bachelor's degree in Engineering, Information Technology, or a related field; advanced degree preferred. 10+ years of experience in infrastructure engineering, facility management, or related roles. Expertise in data center operations, including power, cooling, and physical security. Strong knowledge of networking, server architecture, and virtualization technologies. Familiarity with federal compliance standards, such as FISMA, NIST, and FedRAMP. Experience with infrastructure monitoring tools and performance optimization. Proven ability to manage large-scale infrastructure projects and cross-functional teams. Excellent problem-solving and analytical skills to address complex technical challenges. Strong communication and leadership skills to interact with stakeholders and guide teams. Relevant certifications, such as PMP, ITIL, or data center-specific credentials (e.g., CDCP, CDCS), are highly desirable.

Infrastructure Management

[Infrastructure Specialist or Systems Engineer Level I] The Infrastructure Manager Level I is an entry-level IT professional responsible for supporting the design, implementation, and maintenance of an organization's IT infrastructure. This role focuses on assisting with basic system configurations, monitoring infrastructure performance, and troubleshooting hardware and software issues. The Level I specialist works under the guidance of senior engineers to ensure the reliability and security of IT systems.

[Infrastructure Specialist or Systems Engineer Level II] The Infrastructure Manager Level II is a mid-level IT professional responsible for designing, implementing, and maintaining IT infrastructure systems. This role involves configuring advanced systems, troubleshooting complex issues, and ensuring the scalability, reliability, and security of the organization's infrastructure. The Level II specialist collaborates with IT teams to support enterprise projects and provides technical guidance to junior staff.

Major Duties and Responsibilities

[Infrastructure Specialist or Systems Engineer Level I] Assist in the installation, configuration, and maintenance of servers, storage systems, and network devices. Monitor infrastructure performance and report issues to senior staff. Perform basic troubleshooting of hardware, software, and connectivity problems. Support the implementation of system upgrades and patches. Document system configurations, processes, and troubleshooting steps. Provide technical support to end users for infrastructure-related issues. Assist in maintaining system security by following established protocols. Collaborate with IT teams to ensure infrastructure reliability and performance. Conduct routine checks of system health and resource utilization. Learn and apply best practices for infrastructure management and operations.

[Infrastructure Specialist or Systems Engineer Level II] Design, configure, and maintain servers, storage systems, and network devices to support organizational needs. Troubleshoot and resolve complex infrastructure issues to ensure minimal downtime. Monitor and optimize system performance and resource utilization. Implement system upgrades, migrations, and new deployments. Maintain system security by configuring firewalls, access controls, and encryption protocols. Document infrastructure architecture, configurations, and procedures. Collaborate with IT teams to integrate infrastructure systems with other technologies. Conduct regular audits of systems to ensure compliance with organizational policies. Provide technical guidance and training to junior staff and end users. Stay updated on emerging infrastructure technologies and recommend improvements.

Professional Qualifications/Skills

[Infrastructure Specialist or Systems Engineer Level I] Associate's degree in Information Technology, Computer Science, or a related field (or equivalent experience). Minimum of 1 year of experience in IT infrastructure support or a related role. Basic understanding of server and storage systems, including Windows and/or Linux environments. Familiarity with networking concepts, such as TCP/IP, DNS, and DHCP. Strong problem-solving and communication skills. Ability to follow instructions and work collaboratively in a team environment. Relevant certifications, such as CompTIA Server+ or Microsoft Certified: Azure Fundamentals, are preferred. Willingness to learn and adapt to new technologies. Basic knowledge of virtualization platforms, such as VMware or Hyper-V, is a plus. Ability to work in a structured environment and meet deadlines. **[Infrastructure**

Specialist or Systems Engineer Level II] Bachelor's degree in Information Technology, Computer Science, or a related field (or equivalent experience). Minimum of 3 years of experience in IT infrastructure or systems engineering. Proficiency in managing Windows and/or Linux server environments. Familiarity with virtualization platforms, such as VMware, Hyper-V, or cloud-based solutions (e.g., AWS, Azure). Strong understanding of networking concepts, including DNS, DHCP, VLANs, and firewalls. Experience with enterprise storage systems and backup solutions. Relevant certifications, such as Microsoft Certified: Azure Administrator, VMware Certified Professional (VCP), or CompTIA Server+, are preferred. Excellent problem-solving and analytical skills. Ability to work independently and manage multiple tasks. Strong communication skills to interact with technical and non-technical stakeholders.

Infrastructure Manager

The Infrastructure Manager is a senior-level professional responsible for overseeing the design, implementation, and management of an organization's IT infrastructure. The Infrastructure Manager involves leading teams, managing complex systems, and ensuring the reliability, scalability, and security of IT operations. The individual provides strategic guidance, resolves high-level technical challenges, and ensures that infrastructure aligns with organizational goals and compliance requirements.

Major Duties and Responsibilities

Lead the design, deployment, and management of enterprise IT infrastructure, including servers, storage, and networks. Oversee the daily operations of infrastructure systems to ensure high availability and performance. Develop and implement infrastructure strategies, policies, and procedures to meet organizational objectives. Manage and mentor technical teams, providing guidance on best practices and professional development. Conduct capacity planning and performance optimization to ensure scalability and efficiency. Ensure compliance with federal regulations, security standards, and organizational policies. Collaborate with stakeholders to align infrastructure solutions with business and mission needs. Lead incident response and root cause analysis for critical infrastructure issues. Manage vendor relationships, contracts, and procurement for infrastructure-related services and equipment. Prepare and present reports on infrastructure performance, risks, and improvement plans to leadership.

Professional Qualifications/Skills

Bachelor's degree in Information Technology, Computer Science, Engineering, or a related field; advanced degree preferred. 10+ years of experience in IT infrastructure management or systems engineering, with at least 5 years in a leadership role. Expertise in enterprise-level systems, including virtualization, cloud platforms, and storage solutions. Strong knowledge of networking protocols, security frameworks, and disaster recovery planning. Familiarity with federal compliance standards, such as FISMA, NIST, and FedRAMP. Proven experience managing large-scale IT projects and cross-functional teams. Excellent problem-solving and decision-making skills for complex technical challenges. Strong communication and leadership skills to interact with technical teams and executive stakeholders. Relevant certifications, such as ITIL, PMP, CISSP, or cloud-specific credentials (e.g., AWS, Azure), are highly desirable. Ability to adapt to emerging technologies and drive innovation within the organization.

Innovation Technology SME

The Innovation Technology **SME** is a senior-level expert responsible for driving technological innovation and strategic planning within an organization. The SME identifies emerging technologies, developing strategies to integrate them into operations, and aligning technology initiatives with organizational goals. The individual provides thought leadership, advises on complex technical challenges, and ensures the organization remains competitive and forward-thinking in its use of technology.

Major Duties and Responsibilities

Identify and evaluate emerging technologies to determine their potential impact on organizational goals and operations. Develop and implement technology strategies that align with business objectives and mission requirements. Provide expert guidance on the adoption and integration of innovative solutions, including cloud, AI, and automation technologies. Lead cross-functional teams to design and execute technology transformation initiatives. Conduct market research and analysis to inform technology investment decisions. Collaborate with stakeholders to ensure technology solutions address operational challenges and improve efficiency. Develop roadmaps for technology adoption, including timelines, budgets, and resource allocation. Ensure compliance with federal regulations, security standards, and industry best practices. Present findings, recommendations, and strategic plans

to executive leadership and decision-makers. Monitor and assess the performance of implemented technologies, recommending improvements as needed.

Professional Qualifications/Skills

Bachelor's degree in Information Technology, Computer Science, Engineering, or a related field; advanced degree preferred. 10+ years of experience in technology strategy, innovation, or related roles, with a focus on emerging technologies. Expertise in cloud computing, artificial intelligence, machine learning, and automation technologies.

Strong knowledge of federal compliance standards, such as FISMA, NIST, and FedRAMP. Proven ability to lead large-scale technology transformation projects and cross-functional teams. Excellent analytical and problem-solving skills to address complex technical and strategic challenges. Strong communication and presentation skills to convey technical concepts to non-technical audiences. Relevant certifications, such as ITIL, PMP, CISSP, or cloud-specific credentials (e.g., AWS, Azure), are highly desirable. Experience with technology road-mapping, budgeting, and resource planning. Ability to adapt to rapidly changing technology landscapes and drive innovation within the organization.

Mobile Device Administrator

[IT Specialist (Mobile Device Management) Level I] The IT Specialist (Mobile Device Management) Level I is an entry-level IT professional responsible for supporting the deployment, configuration, and maintenance of mobile devices and Mobile Device Management (MDM) systems. This role focuses on ensuring mobile devices are secure, functional, and compliant with organizational policies. The IT Specialist Level I assists with troubleshooting device issues, managing user accounts, and implementing basic MDM configurations under the guidance of senior staff. **[IT Specialist (Mobile Device Management) Level II]** The IT Specialist (Mobile Device Management) Level II is a mid-level IT professional responsible for managing and optimizing mobile devices and MDM systems across the organization. This role involves configuring advanced MDM policies, troubleshooting complex device issues, and ensuring the security and compliance of mobile devices. The IT Specialist Level II collaborates with IT teams to support enterprise mobility strategies and provides technical guidance to junior staff.

Major Duties and Responsibilities

[IT Specialist (Mobile Device Management) Level I] Assist in the deployment and configuration of mobile devices, including smartphones, tablets, and laptops.

Support the implementation and maintenance of MDM systems to manage device security and compliance. Troubleshoot and resolve basic mobile device issues, including connectivity and application errors. Enroll devices into the MDM platform and ensure proper configuration settings. Monitor device performance and report issues to senior staff. Provide technical support to end users for mobile device-related concerns. Document device configurations, policies, and troubleshooting procedures. Assist in applying security updates and patches to mobile devices. Ensure compliance with organizational policies for mobile device usage. Collaborate with IT teams to support mobile device integration with enterprise systems. **[IT Specialist (Mobile Device Management) Level II]** Configure and manage MDM systems to enforce security policies and compliance standards. Troubleshoot and resolve complex mobile device issues, including application and connectivity problems. Develop and implement advanced MDM policies for device management, security, and access controls. Monitor and optimize mobile device performance and usage across the organization. Support the integration of mobile devices with enterprise systems, such as email and collaboration tools. Conduct regular audits of mobile devices to ensure compliance with organizational policies. Document MDM configurations, policies, and procedures for knowledge sharing and efficiency. Provide technical guidance and training to junior staff and end users. Collaborate with IT teams to support mobile device upgrades and migrations. Stay updated on emerging mobile technologies and recommend improvements to the mobility strategy.

Professional Qualifications/Skills

[IT Specialist (Mobile Device Management) Level I] Associate's degree in Information Technology, Computer Science, or a related field (or equivalent experience). Minimum of 1 year of experience in IT support or mobile device management. Basic understanding of MDM platforms, such as Microsoft Intune, AirWatch, or MobileIron. Familiarity with mobile operating systems, including iOS and Android. Strong problem-solving and communication skills. Ability to follow instructions and work collaboratively in a team environment. Relevant certifications, such as CompTIA Mobility+ or Microsoft Certified: Modern Desktop Administrator Associate, are preferred. Willingness to learn and adapt to new technologies. Basic knowledge of mobile device security principles is a plus. Ability to work in a structured environment and meet deadlines. **[IT Specialist (Mobile Device**

Management) Level III] Bachelor's degree in Information Technology, Computer Science, or a related field (or equivalent experience). Minimum of 3 years of experience in mobile device management or a related IT role. Proficiency in managing MDM platforms, such as Microsoft Intune, AirWatch, or MobileIron. Strong understanding of mobile operating systems, including iOS and Android, and their security features. Experience with enterprise mobility strategies and device lifecycle management. Familiarity with mobile device security frameworks, such as encryption, remote wipe, and access controls. Relevant certifications, such as CompTIA Mobility+, Microsoft Certified: Endpoint Administrator, or VMware Workspace ONE, are preferred. Excellent problem-solving and analytical skills. Ability to work independently and manage multiple tasks. Strong communication skills to interact with technical and non-technical stakeholders.

Mobile Support – Lead

The Mobile Support – **Lead** is responsible for overseeing the management, deployment, and support of mobile devices and related technologies within an organization. This Lead ensures the effective operation of mobile systems, provides leadership to the mobile support team, and develops strategies to optimize mobile device usage. This individual serves as the primary point of contact for mobile technology initiatives, ensuring compliance, security, and alignment with organizational goals.

Major Duties and Responsibilities

Lead the deployment, configuration, and management of mobile devices, including smartphones, tablets, and mobile applications. Supervise and mentor the mobile support team, ensuring timely resolution of user issues and service requests. Develop and implement mobile device management (MDM) policies and procedures to ensure security and compliance. Monitor mobile device performance and usage, identifying opportunities for optimization and cost savings. Collaborate with IT and business stakeholders to align mobile technology solutions with organizational needs. Manage vendor relationships and contracts for mobile devices, services, and applications. Provide training and guidance to end-users on mobile device functionality and best practices. Ensure compliance with federal regulations, security standards, and organizational policies for mobile technology. Conduct regular audits of mobile devices and systems to ensure proper usage and security.

Prepare reports on mobile support operations, including performance metrics and recommendations for improvement.

Professional Qualifications/Skills

Bachelor's degree in Information Technology, Computer Science, or a related field; equivalent experience may be considered. 7+ years of experience in mobile device support or IT operations, with at least 3 years in a leadership role. Expertise in mobile device management (MDM) platforms, such as Microsoft Intune, AirWatch, or MobileIron. Strong knowledge of mobile operating systems, including iOS and Android. Familiarity with federal compliance standards, such as FISMA, NIST, and FedRAMP, as they relate to mobile technology. Proven ability to lead teams and manage large-scale mobile technology initiatives. Excellent troubleshooting and problem-solving skills for mobile device and application issues. Strong communication and interpersonal skills to interact with users, stakeholders, and vendors. Relevant certifications, such as CompTIA Mobility+, ITIL, or MDM-specific credentials, are highly desirable. Ability to adapt to emerging mobile technologies and drive innovation within the organization.

Network Engineer – Lead

[Network Engineer Level I] The Network Engineer Level I is an entry-level IT professional responsible for supporting the installation, configuration, and maintenance of network systems. This role focuses on basic troubleshooting, monitoring network performance, and assisting senior engineers with network-related tasks. The Network Engineer Level I ensures the smooth operation of network infrastructure and provides technical support to end users. **[Network Engineer Principal/SME]** The Network Engineer Principal/Subject Matter Expert (SME) is a top-tier IT professional responsible for providing expert-level guidance on the design, implementation, and optimization of complex network systems. This role involves strategic planning, resolving the most challenging network issues, and advising on emerging technologies to support organizational goals. The SME serves as a trusted advisor to leadership and a mentor to the technical team.

Major Duties and Responsibilities

[Network Engineer Level I] Assist in the installation, configuration, and maintenance of network hardware and software. Monitor network performance and report issues to senior engineers. Perform basic troubleshooting of network connectivity issues. Support the implementation of network upgrades and changes.

Document network configurations and processes. Provide technical support to end users for network-related issues. Assist in maintaining network security by following established protocols. Collaborate with IT teams to ensure network reliability and performance. Conduct routine checks of network equipment and connections. Learn and apply best practices for network management and operations. **[Network Engineer Principal/SME]** Provide expert-level guidance on the design and implementation of enterprise network systems. Lead strategic planning for network infrastructure to align with organizational objectives. Resolve the most complex network issues and provide advanced troubleshooting support. Evaluate and recommend emerging network technologies to enhance capabilities. Develop and enforce enterprise-wide network policies, standards, and security protocols. Collaborate with leadership to assess and address long-term network needs. Document and present network strategies, designs, and recommendations to stakeholders. Mentor and train technical teams to build organizational expertise. Ensure compliance with federal regulations and industry best practices. Represent the organization in high-level technical discussions and negotiations.

Professional Qualifications/Skills

[Network Engineer Level I] Associate's degree in Information Technology, Computer Science, or a related field (or equivalent experience). Minimum of 1 year of experience in network support or a related IT role. Basic understanding of networking concepts, including TCP/IP, DNS, and DHCP. Familiarity with network hardware, such as routers, switches, and firewalls. Strong problem-solving and communication skills. Ability to follow instructions and work collaboratively in a team environment. Relevant certifications, such as CompTIA Network+, are preferred. Willingness to learn and adapt to new technologies. Basic knowledge of network monitoring tools is a plus. Ability to work in a structured environment and meet deadlines. **[Network Engineer Principal/SME]** Master's degree in Information Technology, Computer Science, or a related field (or equivalent experience). Minimum of 10 years of experience in network engineering or a related IT role. Expertise in designing and managing large-scale, complex network systems. Advanced knowledge of networking protocols, cloud networking, and security frameworks. Relevant certifications, such as Cisco Certified Internetwork Expert (CCIE) or Certified Information Systems Security Professional (CISSP), are highly desirable. Proven ability to lead strategic initiatives and manage large-scale projects.

Exceptional problem-solving and analytical skills. Strong communication and leadership skills to interact with executive stakeholders. Experience with federal IT security standards, such as FISMA and NIST. Ability to stay ahead of industry trends and advise on emerging technologies.

Network Engineer

[Network Engineer Level II] The Network Engineer Level II is a mid-level IT professional responsible for designing, implementing, and maintaining network systems. This role involves troubleshooting complex network issues, optimizing network performance, and ensuring the security and reliability of the infrastructure. The Network Engineer Level II collaborates with other IT teams to support organizational goals and projects. **[Network Engineer Level III]** The Network Engineer Level III is a senior IT professional responsible for leading the design, implementation, and management of complex network systems. This role involves resolving high-level network issues, optimizing infrastructure for scalability, and ensuring compliance with security standards. The Network Engineer Level III provides strategic guidance and technical leadership to the organization.

Major Duties and Responsibilities

[Network Engineer Level II] Design, configure, and maintain network systems, including LANs, WANs, and wireless networks. Troubleshoot and resolve complex network issues to ensure minimal downtime. Monitor network performance and implement optimizations as needed. Support the deployment of new network technologies and upgrades. Maintain network security by configuring firewalls, VPNs, and access controls. Document network architecture, configurations, and procedures. Collaborate with IT teams to integrate network systems with other technologies. Conduct regular audits of network systems to ensure compliance with policies. Provide technical guidance to junior engineers and support staff. Stay updated on emerging network technologies and best practices. **[Network Engineer Level III]** Design and implement advanced network architectures to support organizational needs. Lead the planning and execution of network upgrades, migrations, and expansions. Perform advanced troubleshooting and root cause analysis for critical network issues. Optimize network performance and scalability through proactive monitoring and adjustments. Develop and enforce network policies, procedures, and security protocols. Manage network hardware and software lifecycle, including procurement and upgrades. Collaborate with stakeholders to

assess and address network requirements. Document network designs, configurations, and operational procedures. Mentor and train junior engineers to build team expertise. Ensure compliance with federal IT security standards and regulations.

Professional Qualifications/Skills

[Network Engineer Level II] Bachelor's degree in Information Technology, Computer Science, or a related field (or equivalent experience). Minimum of 3 years of experience in network engineering or a related IT role. Proficiency in networking protocols, such as TCP/IP, BGP, OSPF, and VLANs. Experience with network hardware, including routers, switches, and firewalls. Strong understanding of network security principles and tools. Familiarity with network monitoring and management tools, such as SolarWinds or Cisco Prime. Relevant certifications, such as Cisco Certified Network Associate (CCNA) or CompTIA Network+, are preferred. Excellent problem-solving and analytical skills. Ability to work independently and manage multiple tasks. Strong communication skills to interact with technical and non-technical stakeholders. **[Network Engineer Level III]** Bachelor's degree in Information Technology, Computer Science, or a related field (or equivalent experience). Minimum of 7 years of experience in network engineering or a related IT role. Expertise in advanced networking protocols, such as MPLS, BGP, and QoS. Proficiency in managing enterprise-level network hardware and software. Strong understanding of network security frameworks, such as NIST or FISMA. Experience with cloud networking solutions, such as AWS or Azure. Relevant certifications, such as Cisco Certified Network Professional (CCNP) or Juniper Networks Certified Professional (JNCP), are highly desirable. Excellent leadership, communication, and project management skills. Ability to work independently and lead cross-functional teams. Strong analytical skills to assess and improve network performance.

Program Manager

The **[Program Manager Level III]** is a senior-level professional responsible for overseeing and managing complex, large-scale programs that align with organizational goals and mission objectives. The Program Manager involves strategic planning, resource allocation, risk management, and ensuring program deliverables are completed on time, within budget, and to the required quality

standards. The individual serves as the primary point of contact for stakeholders, providing leadership, direction, and accountability for program success.

Major Duties and Responsibilities

Develop and manage program plans, including scope, schedule, budget, and resource allocation. Oversee multiple projects within the program, ensuring alignment with organizational objectives. Lead cross-functional teams, providing guidance and resolving conflicts to ensure program success. Monitor program performance, track milestones, and report progress to stakeholders and leadership. Identify and mitigate risks, ensuring continuity and minimizing disruptions to program execution. Ensure compliance with federal regulations, organizational policies, and industry standards. Manage stakeholder relationships, including internal teams, external partners, and vendors. Prepare and deliver presentations, reports, and briefings to executive leadership and stakeholders. Drive continuous improvement by analyzing program outcomes and implementing lessons learned. Ensure effective communication across all levels of the program to maintain transparency and collaboration.

Professional Qualifications/Skills

Bachelor's degree in Business Administration, Project Management, or a related field; advanced degree preferred. 10+ years of experience in program management, with a focus on large-scale, complex programs. Proven expertise in managing budgets, schedules, and resources for multi-project programs. Strong knowledge of federal compliance standards, such as FAR, FISMA, and NIST. Experience with project management methodologies, such as Agile, Scrum, or Waterfall. Relevant certifications, such as PMP, PgMP, or ITIL, are highly desirable. Excellent leadership and interpersonal skills to manage teams and build stakeholder relationships. Strong analytical and problem-solving skills to address program challenges and risks. Exceptional communication and presentation skills to convey program status and strategies effectively. Ability to adapt to changing priorities and drive innovation within program execution.

Senior Systems Administrator

The [Systems Administrator Level II] is a mid-level IT professional responsible for managing, maintaining, and troubleshooting an organization's IT systems and infrastructure. The Systems Administrator involves ensuring the availability, performance, and security of servers, networks, and applications. This individual

provides technical support, implements system upgrades, and collaborates with other IT teams to address operational needs and resolve complex issues.

Major Duties and Responsibilities

Monitor, maintain, and troubleshoot servers, networks, and system infrastructure to ensure optimal performance. Install, configure, and update operating systems, applications, and system software. Manage user accounts, permissions, and access controls using tools such as Active Directory. Perform routine system backups and recovery procedures to safeguard data and ensure business continuity. Implement and maintain system security measures, including patch management and antivirus updates. Respond to and resolve escalated technical issues from end-users and support teams. Assist in the planning and execution of system upgrades, migrations, and new deployments. Document system configurations, processes, and troubleshooting procedures for knowledge sharing. Collaborate with IT teams to ensure seamless integration of systems and applications. Monitor system performance metrics and recommend improvements to enhance efficiency and reliability.

Professional Qualifications/Skills

Bachelor's degree in Information Technology, Computer Science, or a related field; equivalent experience may be considered. 5+ years of experience in systems administration or IT operations. Proficiency in managing Windows and Linux operating systems, including server environments. Experience with virtualization technologies, such as VMware or Hyper-V. Strong knowledge of networking concepts, including DNS, DHCP, and TCP/IP. Familiarity with system monitoring tools and IT service management (ITSM) platforms. Experience with Active Directory, Group Policy, and user account management. Strong troubleshooting and problem-solving skills for resolving complex technical issues. Relevant certifications, such as CompTIA Server+, Microsoft Certified: Azure Administrator, or Red Hat Certified System Administrator (RHCSA), are highly desirable. Ability to work independently and collaboratively in a fast-paced environment.

Systems Administrator – Lead

The [Systems Administrator – Lead Level III] is a senior-level IT professional responsible for overseeing the management, maintenance, and optimization of an organization's IT systems and infrastructure. The Administrator - Lead involves leading a team of system administrators, ensuring system reliability, security, and

performance, and providing strategic guidance for system upgrades and improvements. This individual serves as the primary point of contact for complex technical issues and ensures alignment of IT systems with organizational goals and compliance requirements.

Major Duties and Responsibilities

Lead and manage a team of system administrators, providing guidance, mentorship, and performance oversight. Oversee the design, implementation, and maintenance of servers, networks, and system infrastructure. Develop and enforce policies and procedures for system security, backups, and disaster recovery. Monitor system performance and availability, ensuring timely resolution of issues and minimal downtime. Plan and execute system upgrades, migrations, and new deployments to meet organizational needs. Manage user accounts, permissions, and access controls, ensuring compliance with security standards. Collaborate with IT leadership and stakeholders to align system operations with business objectives. Conduct root cause analysis for complex system issues and implement long-term solutions. Document system configurations, processes, and troubleshooting procedures for team use and knowledge sharing. Ensure compliance with federal regulations, industry standards, and organizational policies for IT systems.

Professional Qualifications/Skills

Bachelor's degree in Information Technology, Computer Science, or a related field; advanced degree preferred. 8+ years of experience in systems administration, with at least 3 years in a leadership role. Expertise in managing enterprise-level systems, including Windows and Linux server environments. Strong knowledge of virtualization technologies, such as VMware, Hyper-V, or cloud platforms (e.g., AWS, Azure). Familiarity with networking protocols, DNS, DHCP, and TCP/IP, as well as system monitoring tools. Experience with Active Directory, Group Policy, and advanced user account management. Proven ability to lead teams and manage large-scale system projects. Relevant certifications, such as CompTIA Server+, Microsoft Certified: Azure Solutions Architect, or Red Hat Certified Engineer (RHCE), are highly desirable. Strong analytical and problem-solving skills to address complex technical challenges. Excellent communication and leadership skills to interact with technical teams and executive stakeholders.

Systems Administrator

[Systems Administrator Level II] The Systems Administrator Level II is a mid-level IT professional responsible for managing, maintaining, and troubleshooting an organization's IT systems and infrastructure. This role involves ensuring the availability, performance, and security of servers, networks, and applications. The Systems Administrator Level II works closely with senior administrators and IT teams to implement system upgrades, monitor system health, and resolve technical issues in a timely manner. **[Systems Administrator Level III]** The Systems Administrator Level III is a senior IT professional responsible for the design, implementation, and advanced management of an organization's IT systems and infrastructure. This role involves leading complex projects, resolving high-level technical issues, and ensuring the reliability, scalability, and security of IT systems. The Systems Administrator Level III also provides strategic guidance, mentors junior staff, and ensures compliance with organizational and regulatory standards.

Major Duties and Responsibilities

[Systems Administrator Level II] Monitor, maintain, and troubleshoot servers, storage systems, and network infrastructure to ensure optimal performance. Perform routine system administration tasks, including user account management, permissions, and access controls. Install, configure, and update operating systems, applications, and security patches. Conduct system backups and recovery operations to ensure data integrity and availability. Monitor system performance and resource utilization, identifying and resolving bottlenecks. Assist in the implementation of system upgrades, migrations, and new deployments. Respond to and resolve technical support requests and incidents within established SLAs. Document system configurations, processes, and troubleshooting procedures. Collaborate with IT teams to ensure compliance with organizational security policies and standards. Provide technical support for end users and assist with escalated issues as needed.

[Systems Administrator Level III] Design, implement, and manage enterprise-level IT systems, including servers, storage, and networks. Lead the planning and execution of system upgrades, migrations, and new deployments. Perform advanced troubleshooting and root cause analysis for complex technical issues. Develop and enforce IT policies, procedures, and best practices to ensure system security and reliability. Monitor and optimize system performance, capacity, and availability. Manage disaster recovery and business continuity planning, including backups and failover systems. Collaborate with stakeholders to assess and address IT

infrastructure needs. Document system architectures, configurations, and operational procedures. Mentor and train junior administrators to build team expertise. Ensure compliance with federal IT security standards, such as FISMA, NIST, and other applicable regulations.

Professional Qualifications/Skills

[Systems Administrator Level II] Bachelor's degree in Information Technology, Computer Science, or a related field (or equivalent experience). Minimum of 3 years of experience in systems administration or a related IT role. Proficiency in managing Windows and/or Linux server environments. Familiarity with virtualization technologies, such as VMware or Hyper-V. Experience with system monitoring tools, such as SolarWinds, Nagios, or similar platforms. Knowledge of Active Directory, Group Policy, and domain management. Basic understanding of networking concepts, including DNS, DHCP, and firewalls. Strong problem-solving skills and attention to detail. Relevant certifications, such as CompTIA Server+, Microsoft Certified: Azure Administrator, or Red Hat Certified System Administrator (RHCSA), are preferred. Ability to work collaboratively in a team environment and communicate effectively with technical and non-technical stakeholders. **[Systems Administrator Level III]** Bachelor's degree in Information Technology, Computer Science, or a related field (or equivalent experience). Minimum of 7 years of experience in systems administration or a related IT role. Expertise in managing complex Windows and/or Linux server environments. Advanced knowledge of virtualization platforms, such as VMware, Hyper-V, or cloud-based solutions (e.g., AWS, Azure). Strong understanding of networking protocols, firewalls, and load balancers. Experience with enterprise storage systems and backup solutions. Proficiency in scripting and automation tools, such as PowerShell, Python, or Bash. Relevant certifications, such as Microsoft Certified: Azure Solutions Architect, VMware Certified Professional (VCP), or Certified Information Systems Security Professional (CISSP), are highly desirable. Excellent leadership, communication, and project management skills. Ability to work independently and lead cross-functional teams in high-pressure environments.

Systems Engineer

[Systems Engineer Level I] A Systems Engineer Level I is an entry-level professional responsible for assisting in the design, implementation, and maintenance of IT systems and infrastructure. This role focuses on supporting

system operations, performing routine tasks, and troubleshooting basic issues under the guidance of senior engineers. The Systems Engineer Level I works to ensure systems are functional, secure, and meet organizational requirements. **[Systems Engineer Level II]** A Systems Engineer Level II is a mid-level professional responsible for designing, implementing, and managing IT systems and infrastructure. This role involves more complex tasks, such as system integration, performance optimization, and troubleshooting advanced issues. The Systems Engineer Level II collaborates with stakeholders to ensure systems meet organizational needs and provides technical guidance to junior team members. **[Systems Engineer Level III]** A Systems Engineer Level III is a senior-level expert responsible for leading the design, implementation, and management of complex IT systems and infrastructure. This role involves strategic planning, advanced troubleshooting, and ensuring systems align with organizational goals. The Systems Engineer Level III provides technical leadership, drives innovation, and ensures systems are secure, scalable, and efficient.

Major Duties and Responsibilities

[Systems Engineer Level I] Assist in the installation, configuration, and maintenance of IT systems and hardware. Perform routine system monitoring and maintenance tasks. Troubleshoot basic system issues and escalate complex problems to senior engineers. Support system upgrades and patch management processes. Document system configurations, processes, and procedures. Collaborate with team members to ensure system availability and performance. Provide technical support to end-users for system-related issues. Assist in implementing basic cybersecurity measures to protect systems. Participate in testing and validation of system changes. Maintain knowledge of organizational IT policies and procedures. **[Systems Engineer Level II]** Design and implement IT systems and infrastructure to meet organizational requirements. Perform system integration and ensure compatibility across platforms. Monitor and optimize system performance and reliability. Troubleshoot and resolve complex system issues. Manage system upgrades, patches, and configurations. Develop and maintain technical documentation for systems and processes. Implement and enforce cybersecurity measures to protect systems and data. Collaborate with cross-functional teams to support IT initiatives. Provide technical guidance and mentorship to junior engineers. Stay updated on emerging technologies and recommend improvements. **[Systems Engineer Level III]** Lead

the design and implementation of advanced IT systems and infrastructure. Develop strategies for system optimization, scalability, and reliability. Troubleshoot and resolve critical system issues to ensure high availability. Oversee system upgrades, migrations, and modernization efforts. Implement advanced cybersecurity measures and ensure compliance with federal standards. Create and maintain detailed technical documentation and reports. Collaborate with stakeholders to align systems with organizational objectives. Provide technical leadership and mentorship to engineering teams. Evaluate emerging technologies and recommend innovative solutions. Manage vendor relationships and ensure effective use of resources.

Professional Qualifications/Skills

[Systems Engineer Level I] Basic understanding of IT systems, hardware, and software. Familiarity with operating systems such as Windows, Linux, or macOS. Strong problem-solving and troubleshooting skills. Ability to follow instructions and work collaboratively in a team environment. Basic knowledge of networking concepts and protocols. Customer service orientation and effective communication skills. Relevant certifications such as CompTIA A+ or Network+ are preferred. Minimum of 1-2 years of experience in IT or systems engineering. Willingness to learn and adapt to new technologies. Attention to detail and ability to document processes accurately. **[Systems Engineer Level II]** Strong understanding of IT systems, hardware, software, and networking. Proficiency in operating systems such as Windows Server, Linux, or macOS. Experience with virtualization technologies (e.g., VMware, Hyper-V). Knowledge of cybersecurity principles and compliance standards. Ability to troubleshoot and resolve complex technical issues. Excellent communication and collaboration skills. Relevant certifications such as CompTIA Server+, Microsoft Certified: Azure Administrator, or VMware Certified Professional. Minimum of 3-5 years of experience in systems engineering or related fields. Strong analytical and problem-solving skills. Ability to manage multiple projects and prioritize tasks effectively. **[Systems Engineer Level III]** Expert knowledge of IT systems, hardware, software, and networking. Proficiency in advanced system design and architecture principles. Experience with cloud platforms and hybrid environments (e.g., AWS, Azure, Google Cloud). Strong understanding of cybersecurity frameworks and federal compliance standards (e.g., FISMA, FedRAMP). Proven ability to lead large-scale system implementation and modernization projects. Excellent leadership, communication, and collaboration

skills. Relevant certifications such as Microsoft Certified: Azure Solutions Architect, AWS Certified Solutions Architect, or VMware Certified Advanced Professional.
