

STATEMENT OF WORK

1. Objective/Requirements

PitchBook data feed subscription is required to perform congressionally mandated due diligence functions to protect national security as described during the February 26, 2025 House Committee on Small Business hearing titled “Fostering American Innovation: Insights into SBIR/STTR Program”. The objective of this procurement is to gain access to vital data contained within PitchBook’s corpus via direct file transfer, secure file transfer protocol, and/or application platform interfaces to support the due diligence automated processes. This includes the extracting, retrieval, and loading of specific data related to firms submitting proposals to the Small Business Innovation Research / Small Business Technology Transfer program during solicitation periods. Specifically, this data is used to find potential connections between submitting firms and countries of concern as defined by the Department of State. This data is used to identify any potential connections and the risks they pose to the nefarious transfer of U.S. funded technological innovations to countries of concern.

2. Characteristics, Scope, and Specs

The information provided by PitchBook daily for each firm within the corpus of due diligence unique firms must include:

PitchBook Unique Identifier
