

STATEMENT OF WORK

DATE: 23 JAN 2026

1. **SCOPE:**

- 1.1 TITLE: SOUTHWEST REGIONAL MAINTENANCE CENTER (SWRMC)
Everest XL Detect+ video borescope system
- 1.2 SHIP/COMMAND: SWRMC Code 261 / ENGINEERING Division
- 1.3 IDENTIFICATION: 55262 (UIC)
- 1.4 LOCATION: SWRMC Engineering Division
3755 Brinser Street, Bldg. 76
San Diego, CA 92136
- 1.5 CODE 261 POC: Division Head: Bruce Thompson, 619-556-2618,
bruce.d.thomspon.civ@us.navy.mil
SME: Jurie H. Grobler, 619-556-2643,
jurie.h.grobler.civ@us.navy.mil

2. **JOB DESCRIPTION:**

- 2.1 Procure one (1EA) Everest XL Detect+ video borescope system, MFG Part# and description - XLDPB6130 - XL Detect+ Video Borescope System, XLG3T61120FG - 6.1mm Forward View Black Tip, and XLG3T61120SG - 6.1MM SIDE VIEW BLUE TIP.

2.2 Project Background and Objective

The Everest XL Detect+ Video Borescope System is a portable device used for inspection of USN gas turbine engines, which is a USN requirement. SWRMC Code 261 requires a sole source procurement of the subject video scope system used to assess damage to affect repairs on gas turbine engines on US Naval ships. This procurement is for one (1 each) Everest XL Detect+ Video Borescope System, P/N XLDPB6130. This equipment is vital to the Navy's mission. This video scope system is essential to examining the internal condition of all gas turbine engines in the pacific fleet. It must have the capability to inspect compressors, pumps, motors, heat exchangers, piping, and other inaccessible locations up to 3 M (~10 ft).

The Everest XL Detect+ Video Borescope System must be durable MIL-STD 810G and temperature resistant to 100 Deg. C, portable, lightweight, includes software necessary to navigate, measure, capture and record photo or video imagery of location of interest. The XL Detect+ must be tested to the United States Department of Defense Electromagnetic Interference RS103 - ABOVE DECK to MIL-STD-461F.

Standard compliance: Group 1, Class A: EN61326-1 UL. IEC, EN CSA-C22.2:61010-1UN/DOT T1-T8. IP Rating XL Detect+: Tested to IP65.

This video scope system is the only unit that reliably satisfies and meets the Navy's requirements. The capability afforded by this equipment will provide code 261 inspectors the ability to make informed recommendations and collect required Objective Quality Evidence (OQE) for assessment of equipment and system conditions to ensure ship's safety for all personnel.

3. **CONTROLLING GUIDANCE:**

3.1 JFMM CH.23

4. **PERIOD OF PERFORMANCE:**

5.0 23-JAN – 30 SEP 2026
