1.0 Background

The U.S. Department of State leads American diplomacy, with the Secretary of State serving as the President's principal foreign policy advisor. The Department's workforce includes over 12,000 Foreign Service employees representing the United States abroad, more than 9,000 Civil Service employees providing continuity and expertise, and over 37,000 Foreign Service National Staff supporting operations at overseas posts.

The Bureau of Diplomatic Security (DS) ensures a safe and secure environment for U.S. foreign policy worldwide. DS designs and manages security programs for diplomatic missions, investigates passport and visa fraud, conducts personnel security investigations, and protects the Secretary of State and visiting dignitaries. Under the Omnibus Diplomatic Security and Antiterrorism Act of 1986, DS is responsible for safeguarding life, property, and information.

Within DS, the Office of the Chief Technology Officer (DS/EX/CTO) drives the Bureau's mission through technology and data services. Led by the Chief Information Officer (CIO), DS/EX/CTO manages IT program requirements and oversees critical functions, including Application Support, Service Desk Support, Software Development, System Networking, Enterprise Architecture, Strategic Planning, Customer Engagement, Risk Management, and Business Analysis. The office is organized into four divisions: the Front Office (FO), Integrated Systems Division (ISD), Enterprise Production Services Division (EPSD), and System Solutions Division (SSD) ¹.

DS/EX/CTO manages numerous concurrent IT projects, integrating cloud-based and on-premises systems to meet evolving security needs. The office collaborates with the Department, other U.S. Government entities, and Intelligence and Law Enforcement communities to ensure seamless operations. It ensures compliance with federal cybersecurity mandates, implements NIST-compliant policies, and supports the Development, Modernization, and Enhancement of DS systems. By delivering

¹ The organization will undergo a planned organizational change that includes renaming its divisions. While the division names and leadership titles may change, the scope of work, roles, and responsibilities outlined in this document will remain unchanged. Any references to specific divisions or leadership should be understood to apply to their future equivalents under the new naming structure.

secure, adaptable, and innovative IT solutions, DS/EX/CTO enables DS to meet mission requirements and advance U.S. diplomacy in all environments.

2.0 Purpose and Objective

- The objective of this contract is to enable the SSD, within the DS/EX/CTO, to deliver secure, innovative, and reliable IT Software systems solutions that enhance the Bureau's ability to protect U.S. personnel, facilities, and information worldwide. This SOW will have following Task Areas: Development, Modernization, and Enhancement (DME) Services, and Project Management. Specific areas of focus within those task areas include:
 - **DME Services:** Provide integrated technical services to develop, enhance, maintain, and manage DS mission-critical systems and applications through cross-functional teams. Key activities include project management, agile software development lifecycle (SDLC) implementation, DevSecOps practices, hybrid cloud architecture, quality assurance, testing, configuration management, agile project management, database administration, system integration, technical training, and knowledge transfer.
 - **Project Management:** Planning, organizing, and overseeing technology-related projects to ensure successful delivery within defined scope, time, and budget by adopting industry-standard software development life cycle (SDLC) methodologies to meet business requirements.
 - **DevSecOps and Continuous Integration/Continuous Delivery (CI/CD) Implementation:** Improve product quality and delivery pace by implementing robust CI/CD pipelines that automate server provisioning, software configuration, testing, security scanning, and deployment processes.
 - **Infrastructure-as-Code (IaC) and Cloud Integration:** Automate the provisioning, configuration, and security hardening of infrastructure, commercial off-the-shelf (COTS) applications, and cloud environments to decrease security accreditation timelines and ensure quality deployments. Integrate solutions across on-premises, hybrid-cloud, and cloud environments, including Government Clouds such as Azure Government, AWS GovCloud, ServiceNow, and M365.
 - **Technology Modernization:** Implement emerging technologies and processes to reduce delivery time, enhance business value, secure software

solutions according to DOS, NIST, and FISMA security standards, and improve product quality while reducing operational and maintenance expenses.

- **Enhanced Productivity and Quality:** Improve productivity and establish effective business solutions by staffing dedicated cross-functional teams that develop expertise in specific technology domains and business areas. Enhance application quality through automated testing, security scanning, and Section 508 compliance checking.
- **Strategic Roadmaps and Emerging Technologies:** Maintain strategic IT roadmaps that align technology initiatives with agency mission priorities. Evaluate, recommend, and implement emerging technologies to support federal enterprise needs, while recruiting and staffing personnel with mission-critical technical skills.
- **Fault-Tolerant Architectures and Continuity of Operations:** Implement continuity of operations and fault-tolerant architectures that ensure zero trust, zero data loss, and high system availability across both on-premises and cloud platforms, including during cloud migrations or catastrophic events.

This contract will provide DS/EX/CTO with the expertise and resources necessary to develop, integrate, and sustain secure, high-quality systems solutions that enhance operational efficiency, security, and mission success.

3.0 Scope of Work

The Contractor shall provide comprehensive support for all DS/EX/CTO/MTS functions, including mission technology solutions, integrated technology operations, and organizational initiatives. Services must comply with all applicable federal, Departmental, Bureau, and organizational mandates, policies, and regulations.

The Contractor shall deliver high-impact services that enhance the CIO's ability to govern, secure, and modernize the technology environment. This includes aligning investments, risk management, data, and service delivery with mission objectives.

The Contractor must demonstrate attention to detail, produce clear and thorough documentation, and effectively lead cross-functional teams. All work must adhere to federal mandates, regulatory requirements, and organizational priorities. Regular communication and reporting are required to ensure transparency and accountability.

The Contractor shall provide skilled personnel capable of supporting the Division's mission across all offices and functional areas. While personnel may be assigned to specific offices within the Division, their expertise, deliverables, and services will be utilized to address broader needs across the Division and its associated programs. Contracts must demonstrate flexibility and resilience, adapting to evolving priorities, shifting workloads, and emerging requirements. The Contractor's team shall be prepared to perform assigned tasks in any location or for any mission-critical need, ensuring seamless support to the Division's overarching goals.

3.1 Enterprise Risk Management Support

The Contractor shall integrate risk management into IT project plans, ensure redundancy and failover mechanisms for critical systems, and conduct patch management and vulnerability scanning to maintain system integrity. This work will be split between the Development and Operations and Maintenance (O&M) divisions of DS/EX/CTO and BISSO and will ensure their implementation measures are acted on and measured.

3.2 Development, Modernization, and Enhancement (DME) Services

3.2.1 Core Development Platforms and Technologies

The Contractor shall provide development and engineering expertise across multiple technology platforms including but not limited to:

- .NET Framework and .NET Core applications
- Java enterprise applications
- JavaScript/Node.js, React, and Angular js libraries
- Python applications
- Database administrations (SQL Server, Oracle, MySQL)
- Azure Government cloud services
- Microsoft Power Platform (PowerApps, Power BI, Power Automate, Power Pages)
- SharePoint 2016 and Online
- ServiceNow platform
- AWS GovCloud cloud services
- ESRI ArcGIS products Geospatial applications
- Enterprise Search applications and platforms (Azure Search and OpenText IDOL)

- Biometric applications and platforms (Ares-Next)
- Web-API development for system integration
- Azure Data Analytics platforms and services
- Data migration and transformation services
- Azure Artificial intelligence / Machine Learning (AI/ML) platforms and services
- Define DevOps platform architectures aligned with industry best practices and DOS standards.
- Design and build DevOps pipelines
- Refactor applications for cloud environments if needed and execute data migration plans.
- Design and build platforms using tools such as GitLab, Jenkins, SonarQube, Artifactory, and Fortify.

3.2.2 Cloud Architecture and Migration

The Contractor shall provide cloud architecture services including:

- Cloud architecture design and implementation
- Hybrid-multi-cloud strategy development
- Cloud migration planning and execution
- Cloud security and compliance implementation
- Cost optimization and resource management

3.2.3 Training and Documentation Support

The Contractor shall implement process improvement methodologies for all training and documentation activities, continuously enhancing delivery methods and content effectiveness through collaborative efforts with MTS personnel. The Contractor shall develop and deliver training materials including:

- Self-service training materials for software releases and product enhancements
- Video-based training and tutorials
- Online help and user documentation
- Standard Operating Procedures (SOPs) and user guides
- Operations manuals and technical documentation
- Agile process training materials for teams and stakeholders
- SDLC documentation including user stories, requirements matrices, and marketing content

3.3 Development Support Services

3.3.1 Architecture and Technical Support Services

The Contractor shall provide enterprise architecture support, technical leadership, and specialized technical services to support MTS development and modernization initiatives. The Contractor shall drive process improvement initiatives across all technical support services, working collaboratively with government personnel to streamline architectural review processes, enhance technical standards, and improve service delivery mechanisms. The Contractor shall provide comprehensive solutions architecture services, including:

- Support enterprise modernization initiatives and provide architectural guidance for development teams
- Ensure alignment with DOS and DS/CTO enterprise architecture standards
- Research and recommend emerging technologies
- Perform technology assessments and proof-of-concept development
- Develop technology-specific architectural standards and guidelines
- Create reference architectures for common platforms and support platform migration efforts
- Design scalable, secure, and maintainable solutions
- Provide technical consulting services to DS program offices

3.3.2 DevSecOps and CI/CD Implementation

Services shall be provided by experts with demonstrated experience in DS specified tools and technologies. DevSecOps involves analysis, requirements collection, design, development, test, platform engineering, and production operations in addition to configuration management, planning, and project management. The Contractor shall implement comprehensive DevSecOps practices including:

- Infrastructure-as-Code (IaC): Automate infrastructure provisioning and configuration through code with the mindset and practice of automating everything possible
- Continuous Integration (CI): Automated code integration, building, and initial testing
- Continuous Delivery (CD): Automated deployment of pipelines with appropriate quality gates

- Security Integration: Automated security scanning, vulnerability assessment, and compliance checking
- Test Automation: Comprehensive automated testing including unit, integration, functional, and security tests
- Monitoring and Feedback: Real-time monitoring, logging, and performance feedback loops
- CI/CD Pipeline Management: Design, implementation, and maintenance of build and deployment automation
- Configuration Management: Comprehensive configuration management and security scanning integration

3.3.3 Authorization and Accreditation (A&A) and Authority to Operate (ATO) Support

The Contractor shall provide comprehensive support for A&A and ATO processes for all applications and systems, to include, but not limited to:

- Support System Security Plan (SSP) development and maintenance
- Support with security control implementation and documentation
- Support continuous monitoring activities and evidence collection
- Support with Risk Assessment and Risk Management Framework (RMF) compliance
- Support preparation of security authorization packages
- Support with Independent Verification and Validation (IV&V) activities for security controls
- Support Plan of Action and Milestones (POA&M) development and tracking
- Support with security control assessments and remediation activities
- Support FedRAMP compliance activities where applicable
- Support with FISMA compliance documentation and reporting
- Support security artifact development including control implementation statements
- Support with security testing and validation activities supporting ATO processes
- Support process improvement initiatives for A&A and ATO workflows in collaboration with government FTEs

3.3.4 Configuration and Release Management

The Contractor shall ensure appropriate fallback plans exist for each release and government approval is obtained for each production release. The Contractor shall perform comprehensive configuration management and software release management activities including:

- Configuration and change notices and release notes
- Maintaining master deployment and patch schedules
- Source code repository management with version control systems (e.g., GIT, Subversion, Azure DevOps)
- Binary repository management serves as the official system of records for software releases
- Deployment coordination for patches, releases, and database scripts across environments
- Rollback plan development
- Capturing all dependencies and supporting organizational versioning strategies
- Managing code movement through Quality Gates from initial development to production builds
- Configuration and Release process development and maintenance
- After action report development and management

3.3.5 UI/UX Services and Training Services

The Contractor shall provide user interface and user experience services including:

- Develop and maintain standard UI/UX requirements, design and development for mobile and web applications
- User research and usability testing
- Wireframing and prototyping
- Design system development and maintenance
- Accessibility and Section 508 compliance integration
- User interaction design and information architecture
- Develop and maintain user training materials including videos and documents as required

3.3.6 Quality Management Framework

The Contractor shall implement a comprehensive quality management approach including:

- Integration with ongoing ISO-9001 processes and annual organizational recertification
- Definition, development, and automation of Quality Gate inspections for custom coded projects
- Quantifiable and automated approaches for measuring feature compliance, maintainability, security compliance, and performance
- Quality Assurance (QA) reviews for software requirements, design, engineering standards, implementation, documentation, testing, and configuration management
- Assumption and improvement of existing CTO quality management programs across all organizational process areas

3.3.7 Testing Services

The Contractor shall provide comprehensive testing services to ensure all deliverables meet government standards and requirements, to include:

- Unit Testing to test individual components/modules to verify that each unit works as intended in isolation
- Integration Testing to test interactions between integrated modules to ensure that different components work together correctly
- System/Regression Testing to test the complete system as a whole (end-to-end) to validate the system meets functional and non-functional requirements
- Support User Acceptance Testing to perform on the complete system before production release to ensure the software is ready for production deployment and meets business needs
- Support Deployment verification and validation Support to verify and validate production deployment meets functional and non-functional requirements
- Automated Testing using Playwright to perform Regression Testing
- Static Application Security Testing (SAST), Software Composition Analysis (SCA), Software Bill of Material (SBOM), Dynamic Application Security Testing (DAST), and Infrastructure-as-Code scanning using Fortify Software Security Center (SSC) to support DevSecOps to identify vulnerabilities

- Section 508 Testing using JAWS, Google Lighthouse, WAVE, ANDI, Color Contrast Analyzer, and Axe DevTools to ensure all IT software solutions are compliant with Section 508 of Rehabilitation Act (29 U.S.C. 794d)

3.3.8 Quality Tools and Processes

The Contractor shall utilize and maintain automated quality tools approved by DOS and DS including code quality analysis, security scanning, automated compliance checking tools, test case management systems, and defect tracking and resolution processes. All testing processes shall be subject to continuous improvement initiatives, with the contractor leading efforts to enhance testing efficiency, coverage, and quality in partnership with government FTEs.

3.3.9 Database Administration and Development

The Contractor shall provide database administration services including:

- Database administration for enterprise database systems (e.g., Oracle, SQL, etc.)
- Database performance optimization and monitoring
- Backup and recovery planning and implementation
- Database migration and upgrade services
- Data architecture and modeling support
- Database Query development services

3.3.10 System Administration

The Contractor shall provide system administration support including:

- Development, test, and staging environment(s) management
- Infrastructure-as-Code implementation
- Cloud resource provisioning and management
- Security patch management and deployment
- System monitoring and performance optimization

3.3.11 Tier 3 Production Support

The Contractor shall provide Tier 3 support services and assist with environment management, to include, but not limited to:

- Resolve issues requiring assessment and remediation of software code or configuration defects
- Provide on-demand support with appropriate substitute coverage

- Maintain and execute Tier 3 Support SOPs addressing response and escalation requirements
- Conduct analytical and research support activities
- Collaborate with Development and QA teams to resolve customer product issues
- Provide effective communication and technical details to support teams
- Assist with ongoing development and technical issues while recommending solutions
- Support OS-level patching coordination
- Assist in establishing and maintaining standard operating system configurations for different development platforms
- Support administration of virtualized environments for development, test, sandbox, and core services
- Assist developers in troubleshooting development environments and pipeline setup
- Provide training on proper procedures for development pipeline and SDLC execution
- Ensure test environment configurations are representative of production systems
- Assist in establishing backup procedures and disaster recovery verification
- Assist in generating infrastructure, build, test, continuous integration, and deployment scripts
- Support copying production configurations to development and test environments for consistency
- Assist in developing procedures and scripts for creating realistic test data
- Support system user administration in development, test, and UAT environments until production transition

The COR and/or GTM may authorize extended or special hours for emergency system outages. Designated contractor staff may be required to maintain basic systems operations during government shutdowns as part of the emergency support team.

3.3.12 Microsoft 0365 Support

The Contractor shall support the development and management of DS web projects and applications using Microsoft Business Application & Collaboration tools,

including but not limited to: Office365. SharePoint 2016, SharePoint Online, MS Power Platform, and Microsoft Dynamics. Tasks include:

- Leading teams of content administrators, software developers, and designers
- Gathering and analyzing client requirements
- Developing and maintaining solutions
- Creating standards, processes, and service catalog

3.4 Project and Product Management Services per CTO Project

The Contractor should provide comprehensive project and product management services to support DS initiatives, ensuring alignment with organizational objectives and mission priorities. This includes decision support prior to project initiation, monitoring project progress, and applying lessons learned to improve organizational processes. The Contractor shall continuously identify and implement process improvement opportunities in collaboration with government FTEs to enhance portfolio management effectiveness and operational efficiency.

3.4.1 Business Analysis and Requirements Management

The Contractor shall provide comprehensive business analysis and requirements management services including, but not limited to:

- Conduct stakeholder interviews, workshops, and surveys to gather business and technical requirements
- Analyze, document, and validate functional and non-functional requirements ensuring completeness and clarity
- Create and maintain clear and measurable requirements, requirements traceability matrices, manage requirements changes, and ensure version control
- Identify and analyze stakeholders, understand their needs, and manage stakeholder relationships throughout the project lifecycle
- Document current state processes, identify improvement opportunities, and design future state processes
- Assess differences between current capabilities and desired outcomes, identifying necessary changes and improvements
- Create detailed use cases, user stories, and acceptance criteria in collaboration with product owners and development teams
- Facilitate requirements review sessions, obtain stakeholder approval, and ensure requirements meet business objectives

- Analyze the impact of proposed changes on existing systems, processes, and stakeholders
- Produce comprehensive requirements documentation including business requirements documents, functional specifications, and user manuals

3.4.2 Product Management

The Contractor shall provide comprehensive product management services including, but not limited to:

- Define product vision, strategy, and roadmaps aligned with DS mission objectives and user needs
- Develop and maintain product roadmaps, release plans, and feature prioritization based on business value and mission impact
- Manage products from conception through retirement, including planning, development, launch, and maintenance phases
- Create, prioritize, and maintain product backlogs, ensuring features are properly defined and ready for development
- Develop detailed user stories with clear acceptance criteria in collaboration with stakeholders and development teams
- Facilitate communication between business stakeholders and development teams, ensuring alignment on product goals
- Conduct user research, competitive analysis, and market assessment to inform product decisions
- Track product metrics, user adoption rates, and key performance indicators to measure success
- Coordinate product launches, user training, and adoption activities
- Collect, analyze, and incorporate user feedback into product planning and enhancement activities
- Support go-to-market activities and product release coordination
- Monitor product performance and recommend enhancements based on user needs and mission requirements

3.4.3 Performance Management Metrics

The Contractor shall describe their process for managing overall contract and team performance utilizing Agile Management Metrics and Program-Level Earned Value

Management System Metrics (EVMS). Support DS/EX/CTO FTE Portfolio Lead on OMB reporting as required.

3.4.4 Agile Metrics

The Contractor shall design and implement metrics to gauge the success of agile in an organization comparable in size and scope to CTO. At a minimum, the contractor shall describe their capability to report the following metrics: Delivery Velocity (DV), Sprint Burndown, Unit Test Code Coverage, Automation Testing Coverage, Escaped Defects, and Content Spread.

3.5 Contract Administrative Requirements and Reporting

This section defines the administrative requirements and reporting methods for managing the contract and evaluating Contractor performance throughout the Period of Performance (PoP). It ensures transparency, accountability, and alignment with contract objectives. The Contractor shall:

- Perform contract project administration and project management actions as outlined in the DS/EX/CTO MTS PWS, found in [Attachment A](#).
- Execute Agile processes and deliverables integrated into DS/EX/CTO's daily operations, as specified in [Attachment A - MTS PWS](#).
- Fulfill Software Development Lifecycle (SDLC) requirements embedded in DS/EX/CTO's routine operations, as detailed in [Attachment A - MTS PWS](#).

4.0 Deliverables

The Contractor shall provide deliverables that ensure efficient, accurate, and timely performance of all tasks in compliance with contract requirements, federal regulations, and Department of State policies. Deliverables must align with applicable standards, including Federal Acquisition Regulation (FAR), Department of State Acquisition Regulation (DOSAR), Department of State Acquisition Manual (DOSAM), FITARA, FISMA, CIO Act, Project Management Institute (PMI), and Agile methodologies, where relevant. All deliverables become Government property and must comply with the Freedom of Information Act (FOIA) requirements unless marked proprietary and approved by the Government. Deliverables shall be submitted electronically using Microsoft Office Suite tools unless otherwise specified by the Contracting Officer's Representative (COR). Hard copies may be requested by the COR.

4.1 Architecture and Design Products for CTO Projects

- **Enterprise Architecture Compliance:** Submit documentation evidencing compliance with government enterprise architecture principles, standards, patterns, data management, interoperability protocols, and security controls. Reviews of technology alignment and EA governance outcomes are required.
- **Technical Architecture:** Deliver a technical architecture document for each project. This document must detail system components, interfaces, data flows, security controls, technology stack, deployment topology (on-premises, cloud, or hybrid), integrations, scalability, interoperability, and compliance with federal and agency enterprise architecture standards.
- **Detail System Design:** Design documentation that includes module/component blueprints, API specifications, data models, sequence and class diagrams, configuration parameters, error handling, observability designs, and deployment schematics. The documentation must fully support independent system sustainment and operations, enabling the Government to operate and maintain the solution without contractor support. The contractor shall update the documentation following significant design or technology changes.
- **API Documentation and Standards:** API documentation deliverables must specify endpoint definitions, interface contracts, authentication and authorization patterns, versioning strategies, error handling, encryption requirements, rate limiting, and developer onboarding instructions. All APIs must comply with enterprise and federal security requirements.
- **Database Design and Migration Procedures:** Provide database logical and physical data models, schema definitions, indexing strategy, data quality enforcement, backup/recovery/restore procedures, performance tuning documentation, and stepwise migration plans for each system.
- **Cloud Migration Strategy and Plans:** Cloud migration deliverables shall include readiness assessments, landing zone design, security baseline requirements, network and identity planning, migration wave schedules, cutover and rollback plans, data migration processes, and operational handoff guides for federal environments.
- **Alternative of Analysis:** Alternatives analysis documentation must present evaluation of system or technology options, including comparative review of cost,

schedule, risk, security, compliance, performance, operational maintainability, and alignment to enterprise strategies, with clear recommendation and rationale.

- **Innovation Plan:** Identify, evaluate, and document recommendations for optimizing systems and applications through adoption of emerging technologies, including artificial intelligence, automation, cloud-native architectures, and next-generation development frameworks.
- **Technical Versioning Repository:** Maintain a repository of technical stack and upgrades.

4.2 DevSecOps Implementation

- **Baseline CI/CD Pipeline Implementation:** Deliver a baseline CI/CD pipeline orchestrating builds, integrated testing, security scans, approvals, environment deployments, dashboards, and compliance gates across software releases. Templates and documentation supporting reuse and knowledge transfer must be included.
- **Infrastructure as Code (IaC) Templates and Documentation:** IaC deliverables shall contain standardized templates for cloud/on-prem provisioning, parameterized configuration, secrets management, policy enforcement, drift detection, versioning, and documentation enabling agency teams to implement secure, repeatable infrastructure deployments.
- **Configuration Management (CM) Procedures:** Configuration management documentation shall define identification, baselining, change control, audit, and tracking processes for code, infrastructure, environments, and documentation, integrating federal CM best practices and supporting governance requirements.
- **Release Management Standard Operating Procedures:** Release SOPs must specify planning, change aggregation, approval steps, deployment scheduling, stakeholder communication, roll-back protocols, and post-release verification procedures, integrated with CI/CD operations and regulatory governance.
- **Deployment Procedures and Rollback Plans:** Deployment and rollback documents shall provide stepwise runbooks, pre-deployment checks, automated steps, approval flows, validation tests, monitoring protocols, and contingency actions to ensure safe release promotion and recovery.

4.3 Security and Compliance Products for CTO Projects

- **Security Control Implementation:** Security implementation documents must include detailed procedures, baselines, parameter settings, inheritance mapping, and verification evidence supporting RMF and ATO requirements, ongoing assessments, and program-level continuous monitoring.
- **Support ATO:** ATO deliverables must include the System Security Plan (SSP), security control implementation statements, Plan of Action and Milestones (POA&M), assessment evidence, continuous monitoring metrics, and responses to assessor findings for full security authorization lifecycle support.
- **Support Risk Management Framework (RMF) Compliance:** RMF documentation must relate to system categorization, control selection/implementation/assessment, authorization, and continuous monitoring. Contractor must correlate all evidence with required federal and agency overlays and baselines.
- **Support Continuous Monitoring Plan and Reports:** A continuous monitoring plan and quarterly reports must define security controls/schedules, toolsets, roles, escalation/notification protocols, vulnerability management, configuration drift, patch status, and remediation tracking, submitted for government review.
- **Section 508 Compliance Testing Reports:** Accessibility testing reports must document evaluation procedures, test results, identified issues, remediations, and retesting outcomes for each system release, substantiating conformance with Section 508/WCAG and reporting compliance to program leadership.

4.4 Continuity and Knowledge Management Products for CTO Projects

- **Technical Training Materials:** Deliverables must provide curriculum and role-based technical training materials aligned to program disciplines, technologies, DevSecOps, CI/CD, security operations, and system administration for government workforce enablement and ongoing learning.
- **User Training Guide, Videos and Operations Guides:** User and operations documentation must be deliverable per system/release and thoroughly address usage, configuration, deployment, monitoring, troubleshooting, and sustainment, updated with every change in production functionality.
- **Operation Transition:** Transition documentation and knowledge transfer must occur at project completion and include all architecture, code, design,

deployment runbooks, SOPs, support models, and personnel contact matrices required for government sustainment and future operation.

- **Best Practices Guidelines:** Guidelines must be compiled for Agile, DevSecOps, security, testing, observability, and operations. Deliverables must be formally published and updated at least annually to incorporate lessons learned, regulatory changes, and evolving enterprise standards.
- **Lessons Learned Reports:** Lessons learned reports will be required at quarterly intervals and at project milestones documenting successes, issues, corrective actions, and best practices, with recommendations disseminated for improvement at all levels.

4.5 Contract Administrative Requirements and Reporting

This section defines the methods for administering the contract and measuring Contractor performance throughout the PoP. It ensures transparency, accountability, and alignment with contract objectives through oversight, documentation, and evaluation processes outlined in the PWS. The Contractor shall:

- Perform contract project administration and project management actions as specified in [Attachment A - MTS PWS](#).
- Execute Agile processes and deliverables integrated into DS/EX/CTO MTS' daily operations, as outlined in [Attachment A - MTS PWS](#).
- Fulfill SDLC requirements and deliverables embedded in DS/EX/CTO MTS' routine operations, as detailed in [Attachment A - MTS PWS](#).

5.0 Deliverables Schedule

All deliverables² must be submitted electronically using Microsoft Office Suite tools unless otherwise specified in SLAs or by your direct report. Hard copies may be requested by the COR. Deliverables must adhere to the timeline specified in the contract, ensuring compliance with FAR, DOSAR, and DOSAM requirements. Table 1 identifies the deliverables with corresponding frequency:

Table 1 Deliverable Schedule

² Deliverables and Delivery Schedule for Contract Management and Reporting Deliverables and Actions as well as Technical Agile and SDLC Deliverables and Actions are within [Attachment A - FO PWS](#).

Deliverable	Frequency	Recipient(s)
System Architecture Document	Per Project	TOPC for IT Delivery and CTO Project Lead
System Detail Design Document	Per Project	TOPC for IT Delivery and CTO Project Lead
Cloud Migration Strategy and Plans	Per Project	TOPC for IT Delivery and CTO Project Lead
Alternative of Analysis	Per Project	TOPC for IT Delivery and CTO Project Lead
CI/CD Pipeline Implementation Plan	45 Business Days after Project Start	TOPC for IT Delivery and CTO Project Lead
Configuration & Release Management Plan	Per Project	TOPC for IT Delivery and CTO Project Lead
Deployment Procedures and Rollback Plans	Per Release	TOPC for IT Delivery and CTO Project Lead
Security Control Implementation	Per Project	TOPC for IT Delivery and CTO Project Lead
Authority to Operate (ATO) Support	Per Project as required	TOPC for IT Delivery and CTO Project Lead
Section 508 Compliance Testing Report	Per Release	TOPC for IT Delivery and CTO Project Lead
Technical Training Materials	Per Project	TOPC for IT Delivery and CTO Project Lead
User Manuals and Operations Guides	Per Project	TOPC for IT Delivery and CTO Project Lead
Operation Transition Documentation	Per Project	TOPC for IT Delivery and CTO Project Lead

Deliverable	Frequency	Recipient(s)
Lessons Learned Reports	Per Project	TOPC for IT Delivery and CTO Project Lead
After Action Reports	Per Incident	TOPC for IT Delivery and CTO Project Lead
Standard Operating Procedures for Development Environment Management Plan	60 Days after Contract kick off	TOPC for IT Delivery and CTO Project Lead
Standard Operating Procedures for Change Management Plan	60 Days after Contract kick off	TOPC for IT Delivery and CTO Project Lead
Technical Debt resolution Plan	Per Quarter	TOPIC for IT Delivery and CTO Project Lead

6.0 Acceptance Criteria and Compliance Standards

Acceptance Criteria and Compliance Standards for Contractor Project Administrative and Management Actions and Contractor Technical Agile and SDLC Deliverables and actions are within the DS/EX/CTO FO PWS.

The Contractor shall remain engaged with the organization to stay informed of updates to policies and procedures and assist in their refinement and improvement. All deliverables and services must align with the requirements outlined in the SOW or PWS, applicable MIL-STDs, and The Contractor's technical and business proposals. Any deviations from established policies or standards must be approved in writing by the COR or Government Task Manager (GTM). Regular audits and reviews may be conducted to ensure compliance, and The Contractor shall promptly address any deficiencies identified. Failure to adhere to these standards may result in corrective actions or contract termination.

6.1 General Compliance Requirements

The Contractor shall ensure that all work performed under this contract complies with applicable U.S. Government laws, regulations, and Department of State (DOS) standards, policies, procedures, and guidelines. This includes adherence to:

- Foreign Affairs Manuals (FAM) and Foreign Affairs Handbooks (FAH)
- CIS Critical Security Controls (CIS Controls) published by DS/CTS/TIE for use by DOS
- NIST 800-53 (Rev 5) guidelines
- FedRAMP Requirements: For cloud services, ensure compliance with FedRAMP-approved security controls
- FBI Criminal Justice Information Services (CJIS) Security Policy (if applicable)
- CIO Act: Ensure IT systems meet operational and security requirements
- FITARA: Ensure alignment with FITARA mandates for IT resource management

Specific DOS policies include, but are not limited to:

- 5 FAM Series: Information Technology Management, Records Management, Telecommunications, IT Systems, Internet and Intranet Use, and Information Systems Management
- 12 FAM Series: Information Security and Information Security Technology
- 5 FAH Series: IT Systems Handbook, Web Development Handbook, and Information Assurance Handbook
- DOSAM 639.182 – Cybersecurity Supply Chain Risk Management Evaluation Factor and Clause
- DS/DS/EX/CTO Policies and Procedures: Tailored FAM implementation procedures managed through the DS/DS/EX/CTO Process Management Group, available post-award

Specific policies on contract performance and administration:

- FAR 42.708 for contract closeout procedures
- FAR 15.404 for performance evaluation and cost analysis
- Department of State Acquisition Regulation DOSAR 642.1502 for performance evaluation
- DOSAM guidelines for deliverable quality and compliance

6.2 Acceptance Criteria

6.2.1 Deliverable Review and Approval

All deliverables, including documents, reports, services, and other outputs, must be reviewed and approved by the COR and/or GTM. Deliverables must meet task order requirements, be legible, properly formatted, free of spelling or grammatical errors, and align with defined goals and objectives. Comments provided by the COR/GTM must be incorporated into the final version unless valid justification is provided for exclusion. If comments are deemed technically unsound or inconsistent with safe business practices, The Contractor must notify the COR/GTM. A consensus between the COR/GTM and the Contractor is required for deliverable revisions. If consensus cannot be achieved, the COR/GTM will provide final direction.

6.2.2 Submission Format

Deliverables must be submitted in both hard copy and electronic format, compatible with mutually agreed software applications.

6.2.3 Inspection and Notification

The Government will inspect deliverables for completeness, accuracy, and compliance with task order requirements. Inspection may include validation using automated tools, testing, or random checks. The COR will provide written acceptance, comments, or change requests within five (5) to 15 business days or receipt, depending on the complexity of the deliverable. Notifications of rejection will include specific deficiencies causing the rejection.

6.2.4 Correction of Deficiencies

Non-conforming products or services will be rejected. Deficiencies must be corrected within five (5) to 10 business days of the rejection notice, or as agreed upon with the COR. If deficiencies cannot be corrected within the specified timeframe, the Contractor must notify the COR immediately and provide a corrective action plan within 10 business days.

6.2.5 Contract Closeout

At contract closeout, the Contractor must submit a release of claims document and finalize costs within 90 days of task order completion, in accordance with FAR 42.708.

6.3 Performance Standards

- **Outcome:** Deliverables must fully meet contract requirements and have no material quality issues.
- **Requirements:** Deliverables must be of high quality, complete, and delivered on time. Deliverables must be written clearly and concisely, providing DOS stakeholders with a clear understanding of all deliverables.
- **Standards:** Final documentation must be spell checked, grammar checked and accepted by the Government. 100% of delivery dates specified by the Performance Based Statement of Work (PBSOW), COR, and/or SOP (if applicable) must be met.
- **Acceptable Quality Level:** Deliverables are acceptable when identified problems are corrected with minimal COR intervention. No deviation from the standard is allowed unless approved by the COR and documented through a Contract modification issued by the Contracting Officer.
- **Monitoring Source:** The COR will conduct a 100% inspection of all deliverables to ensure compliance.

7.0 Adherence to Policy or Standards

7.1 Language Requirements

English is the required language for all deliverables and communications. Future requirements may involve Operations Center support in additional languages as determined by the Department of State. Contractors must ensure that all personnel, including subcontractors and consultants, meet the language requirements specified in the SOW.

7.2 Data Rights and Ownership

- **Unrestricted Rights to Government Data:** The Government retains unrestricted rights to all Government data. Contractors must provide full copies of data in formats that are readily accessible through predominant industry and/or open data standards at no additional cost to the Government.
- **Government Data Ownership:** All Government data collected, processed, or stored in the system is the property of the Federal Government. This includes, but is not limited to, payroll data, account information, permissions, login activity, and other supporting data necessary for system functionality.

- **Unlimited Rights:** The Federal Government has unlimited rights to all data first produced under any task order in accordance with FAR clause 52.227-14. This includes new code, reports, and other deliverables, which may not be used for any purpose other than the performance of the task order without the expressed consent of the Contracting Officer. Only government encryption will be used on government data in all environments and stages of development. Private keys will be tightly regulated and escrowed with the government.

7.3 Nondisclosure Requirements

The Contractor shall sign a Non-Disclosure Agreement (NDA) on behalf of the company, if applicable, and ensure that all staff assigned to the contract, including subcontractors and consultants, execute and adhere to the terms of the NDA. This agreement protects procurement-sensitive information of the Government and proprietary information of other Contractors.

7.4 Privacy Act Compliance

Work on this contract may require access to Privacy Act information. Contractor personnel must adhere to the Privacy Act, Title 5 of the U.S. Code, Section 552a, and applicable agency rules and regulations.

7.5 Information Assurance and IT Security

The Contractor shall ensure IT security for all systems connected to the Department's network or operated by the Contractor and other external organizations for the agency, regardless of location. This includes:

- **Safeguarding Sensitive Information:** Protecting all classified and unclassified Government data, equipment, and information as sensitive business or confidential information.
- **Incident Reporting:** Reporting real or suspected incidents or violations to the Computer Incident Response Team (CIRT).
- **Threat Mitigation:** Immediately notifying the Government of new or unanticipated threats or hazards or if existing safeguards cease to function.

7.6 IT Security Training

The Contractor shall ensure that all personnel complete mandatory security awareness and role-based advanced security training annually, in accordance with OMB Circular A-130, FISMA, and NIST requirements. Personnel must sign all applicable statements of responsibilities.

7.7 Dissemination of Information

The Contractor shall properly protect all information used, gathered, or developed under this contract. This includes controlling and limiting access to sensitive information and ensuring that data and equipment are secured within their facility. The Contractor must cooperate with the Government during inspections or investigations concerning the protection of sensitive information, including providing documentation showing proof of compliance with federal requirements.

7.8 Section 508 Compliance

All electronic and information technology (EIT) products and services developed, maintained, or procured under this contract must comply with accessibility standards outlined in 36 CFR 1194, which implements Section 508 of the Rehabilitation Act of 1973, as amended. These standards ensure that EIT is accessible to individuals with disabilities, including employees and members of the public, to the maximum extent possible.

If an agency exception to these requirements exists, it must be documented and approved in accordance with applicable regulations. The Contractor is responsible for ensuring that all deliverables meet Section 508 standards unless explicitly exempted by the Government. Failure to comply with these requirements may result in rejection of deliverables or other corrective actions.

7.9 Additional Compliance Requirements

The Contractor shall ensure adherence to the following:

- **FAR Compliance:** FAR 52.227-14 - Rights in Data. FAR 39.101 - IT Security and Performance Standards.
- **DOSAR Compliance:** DOSAR 639.101 - IT Security Policies. DOSAR 642.1502 - Performance Evaluation.
- **DOSAM Compliance:** Align deliverables with enterprise architecture standards and Department of State acquisition policies. DOSAM 639.182 – Cybersecurity Supply Chain Risk Management Evaluation Factor and Clause
- **NIST Compliance:** Ensure security controls align with NIST 800-53 (Rev 5) standards.
- **FedRAMP Compliance:** For cloud services, ensure compliance with FedRAMP-approved security controls.

- **CIO Act Compliance:** Ensure IT systems meet operational and security requirements mandated by the CIO Act.
- **FITARA Compliance:** Ensure alignment with FITARA mandates for IT resource management.

8.0 Government-Furnished Equipment / Information

8.1 General Requirements

The Contractor maintains an inventory accounting system for all Government-Furnished Equipment (GFE), Government-Furnished Software (GFS), Government-Furnished Tools (GFT), and other Government-Furnished Information (GFI). This system must comply with FAR 52.245-1 (Government Property) and DOSAR 645.107 (Government Property Management). The inventory system must include, at a minimum:

- **Product Description:** Make, model, and specifications.
- **Government Tag Number:** Unique identifier for tracking.
- **Date of Receipt:** When the item was received.
- **Name of Recipient:** Individual or team assigned the item.
- **Location of Receipt:** Where the item was initially delivered.
- **Current Location:** Updated location of the item.
- **Purchase Cost:** If applicable, for Contractor Acquired Property (CAP).
- **Task Order Number:** Associated contract or task order under which the equipment is being used.

The Contractor shall attach an updated inventory report to each Monthly Status Report (MSR) and ensure the inventory listing is available for Government review within one business day of a request from the COR.

8.2 Government-Furnished Equipment and Services

The Government will provide workspace, furnishings, computer hardware and software, telephones, and other materials necessary for the Contractor to perform assigned tasks. All computer resources and equipment used at U.S. Government facilities will be Government-furnished and maintained by the Department of State. Additionally, the Government may provide the following types of equipment and services to the Contractor's on-site support staff on a case-by-case basis, depending on individual task requirements and availability:

- **Office Space and Supplies:** If applicable, office space, desks, chairs, and other necessary furniture.
- **Computers and Network Access:** If applicable, PCs with network cards and access to Department systems, including Trouble Ticket Systems for troubleshooting and customer support.
- **Licensed Software:** If applicable, copies of project-required software, including updates and patches.
- **Utilities:** If applicable, adequate power, air conditioning, and office telephones with long-distance commercial access.
- **Printing and Copying:** If applicable, access to laser printers (individual or networked), copiers, shredders, and supplies for document management, including disposal of Privacy Act materials.
- **Mobile Devices:** If applicable, personal IT devices such as cell phones, iPhones, tablets, or other mobile access devices may be issued to individuals assigned to support the contract. Use and management of these devices will adhere to the Department of State policies and guidelines provided at the time of issuance.
- **Communication Tools:** If applicable, cellular phones, speakerphones for conference calls, and facsimile access for long-distance communication.

8.3 Management and Accountability

- **Ownership and Maintenance:** All GFE, GFS, and other property provided by the Government will remain the property of the Department of State. Contractors are responsible for ensuring proper use, safeguarding, and maintenance of all Government-furnished resources during the performance of their duties.
- **Return of Property:** All Government-furnished materials, data, or property must be returned upon completion of the contract.
- **Policies and Procedures:** Use and management of GFE, including mobile devices, will comply with Department of State policies, procedures, and guidelines in place at the time of issuance.
- **Audits and Reviews:** The Government reserves the right to conduct regular audits and reviews of the Contractor's inventory system to ensure compliance with FAR, DOSAR, and DOSAM requirements. Any deficiencies identified must be promptly addressed by The Contractor.

8.4 Unique Items and Highlights

- **Mobile Access Devices:** DS may give mobile devices (e.g., cell phones, tablets) to Contractors on an individual basis. These devices will be managed under applicable Department of State policies, including security protocols and usage guidelines.
- **Privacy Act Materials:** Contractors must ensure proper disposal of sensitive materials using shredders or other approved methods.

8.5 Compliance Requirements

- **FAR Compliance:** FAR 52.245-1 -Establish and maintain accountability for Government property. FAR 52.245-5 - Ensure proper use and maintenance of Government property.
- **DOSAR Compliance:** DOSAR 645.107 - Adhere to Department of State property management policies.
- **DOSAM Compliance:** Align inventory systems and reporting with Department enterprise architecture standards.
- **Privacy Act Compliance:** Ensure proper handling and disposal of sensitive materials in accordance with federal privacy laws.

9.0 Standard Work Hours

The Department of State's normal work hours are Monday through Friday, 8:15 a.m. to 5:00 p.m., with a 45-minute lunch break, excluding federal holidays. Contractor personnel are required to work eight hours per day during these hours and must be present during core hours of 9:00 a.m. to 3:00 p.m. Telework may be authorized on an individual basis in accordance with DS policies, as approved by the CIO, vice DS/EX/CTO, or DS leadership. Any adjustments to the standard work hours, including overtime, extended hours, or after-hours on-call support, must be pre-approved in writing by the COR or GTM.

In cases where urgent operational requirements or mission-critical tasks necessitate work beyond standard hours, the Contractor shall ensure appropriate staffing and coordination to meet these needs. The Contractor is responsible for tracking and reporting work hours in accordance with government procedures, and any deviations from the agreed-upon schedule must be documented and justified. Compliance with all applicable labor laws and regulations governing work hours and conditions is required.

10.0 Place of Performance

The primary place of performance for this contract will be Department of State facilities located in the Washington, D.C. metropolitan area, including DS/EX/CTO offices at 1801 N. Lynn Street, Rosslyn, VA, and other annexes such as the Harry S Truman Building, SA-20, SA-15, SA-9, and DS training facilities like FASTC in Blackstone, VA. Work may also be authorized at the Contractor's facility, which must be located within 50 miles of the DS headquarters building in Rosslyn, VA, to support required in-person interactions with U.S. Government personnel. Additionally, the Contractor may be required to perform work at other domestic or international locations, including overseas diplomatic facilities, as determined by the COR or GTM. Any travel to alternate locations will be coordinated in advance and reimbursed in accordance with federal travel regulations.

Telework may be authorized on an individual basis in accordance with DS policies, as approved by the COR or GTM. The Contractor shall ensure that all telework arrangements comply with security, performance, and IT requirements, including adherence to Department data protection policies. The Contractor must remain flexible and prepared to adapt to changes in the place of performance based on operational needs or evolving mission requirements.

11.0 Security Requirements

The security classification guidance³ for classified information needed for this effort is identified below. If any difficulty is encountered in applying this guidance or if any other contributing Contractor indicates a need for changes in this guidance, the Contractor is authorized and encouraged to provide recommended changes; to challenge the guidance or the classification assigned to any information or material furnished or generated under this contract; and to submit any questions for interpretation of this guidance to the official identified below. Pending final decision, the information involved shall be handled and protected at the highest level of classification assigned or recommended.

11.1 Personnel Security Clearances

Contractor personnel assigned to this contract shall possess a TOP SECRET or SECRET personnel security clearance issued by the Defense Counterintelligence

³ SECURITY GUIDANCE. DD FORM 254, SECURITY GUIDANCE Page 4 of 6 Industrial Security Management System 19AQMM-24-C-0026

and Security Agency (DCSA) prior to contract performance. Personnel specifically designated by the COR must also be eligible for access to Sensitive Compartmented Information (SCI). A FINAL TOP SECRET clearance is required for access to SCI programs. Contractor personnel specifically designated by the COR will be required to have a Moderate Risk Public Trust (MRPT) determination conducted by the Bureau of Diplomatic Security.

All personnel must maintain their clearances for the duration of employment under this contract, and performance by uncleared individuals is strictly prohibited. Loss or downgrading of facility clearance at the TOP SECRET/COMSEC and SCI level, as outlined in the DD Form 254, will be grounds for termination of the contract for default.

Proposed subcontractors must be reviewed by DS/IS/IND prior to contract performance. The prime Contractor shall provide a current signed (by both parties) Subcontract Agreement (with subcontract number listed) between the entities outlining specific SOW to be performed by the subcontractor, to include all security requirements.

All DD Forms 254 for proposed subcontractors required to provide cleared personnel shall be forwarded to DS/ IS/IND for generation and certification prior to issuance to the subcontractor and prior to access to any classified information or controlled access areas.

11.2 Facility Security Clearance

A TOP SECRET facility security clearance is required for contract performance in accordance with DD Form 254, Department of Defense Contract Security Classification Specification. All classified material received or generated during contract performance must be safeguarded and disposed of in accordance with the National Industrial Security Program Operating Manual (NISPOM) (DOD 5220.22-M) and applicable Department of State policies, including 12 FAM 500 and 12 FAM 600.

11.3 Visit Authorization Requests (VARs)

Visit Authorization Requests (VAR) are to be sent to Department of State (DOS), DS/IS/IND, Washington, DC 20520, via email:

DS_IND_contraDS/EX/CTOrVARS@state.gov. A VAR is valid for 12 months; an updated VAR is required 30 days prior to the current VAR expiring.

11.4 Building Access and Identification

Contractor personnel requiring frequent and continuing access to Department of State facilities must obtain a Department of State building pass in accordance with Bureau of Diplomatic Security instructions.

DOS Personal Identification Card issuance procedures can be accessed at <https://usDOS.sharepoint.com/sites/DS-in/C/ST/SSI/NSM/IDM/OneBadge/SitePages/OneBadge.aspx>.

11.5 Handling Classified and Sensitive Information

While at DOS locations, the Contractor shall comply with applicable DOS regulations relative to the protection of classified and/or sensitive information, including the National Industrial Security Program Operating Manual (NISPOM) (32 CFR Part 117) and 12 FAM 500 and 600. DS/IS/IND is responsible for reviewing Contractor assigned to DOS locations. Security clearance requirements for Contractor accessing DOS domestic or overseas information systems shall be in accordance with 12 FAM 600. Furthermore, citizens of specifically designated human intelligence and/or technical intelligence threat countries shall not develop, modify, or perform maintenance on software developed for use on DOS computer systems without approval by DS/CTS.

Contractor's must comply with all applicable Department of State regulations regarding the protection of classified and sensitive information, including:

- **12 FAM 540:** Guidance on handling, access, dissemination, and release of Sensitive but Unclassified (SBU) information.
- **12 FAM 576:** Reporting adverse information concerning cleared contract employees.
- **12 FAM 275:** Reporting impending marriage, cohabitation, or other continuing bonds of affection with foreign nationals.
- **12 FAM 600:** Security clearance requirements for Contractor accessing DOS domestic or overseas information systems.

Classified storage is not required for performance on this contract; therefore, no discussion, storage, or generation of classified information should take place at the

Contractor's facility. SBU Information: See 12 FAM 540 for guidance regarding Handling, Access, Dissemination, and Release of SBU All FAM references can be viewed on the DOS website, www.state.gov.

11.6 Foreign National Restrictions

Citizens of specifically designated human intelligence and/or technical intelligence threat countries shall not develop, modify, or perform maintenance on software developed for use on Department of State computer systems without approval by DS/CTS.

11.7 Mandatory Security Training

Contractor personnel must complete mandatory security awareness and role-based advanced security training annually, in accordance with Department of State, OMB Circular A-130, FISMA, and NIST guidelines.

11.8 Reporting Requirements

Contractor shall immediately report any adverse information concerning any cleared Contractor employees performing on DOS contracts to DCSA in accordance with the NISPOM and to DS/IS/IND in accordance with 12 FAM 576. Contractor personnel working on DOS contracts must report impending marriage, cohabitation and other continuing bonds of affection with foreign nationals to the COR and DS/IS/IND, in accordance with 12 FAM 275.

11.9 Compliance Requirements

Contract performance must adhere to the following:

- **FAR 52.204-2:** Security Requirements.
- **DD Form 254:** Department of Defense Contract Security Classification Specification.
- **NISPOM:** National Industrial Security Program Operating Manual (DOD 5220.22-M).
- **12 FAM Series:** Department of State policies on information security and technology.
- **DOSAR Compliance:** Follow DOSAR 604.404 and DOSAR 639.101 for security policies.
- **OMB Circular A-130:** Federal information resource management requirements.
- **FISMA:** Federal Information Security Modernization Act compliance.

11.10 Unique Items and Highlights

- **SCI Access:** Required for certain positions as identified by the COR or DS/EX/CTO.
- **SBU Information:** The Contractor must follow 12 FAM 540 for handling Sensitive but Unclassified information.
- **Policy Updates:** The Contractors are encouraged to recommend changes to security classification guidance and challenge classifications as needed, pending final decisions.

12.0 Travel

Travel may be required under this contract to support mission-critical tasks, including occasional domestic travel to Department of State or DoD-affiliated locations, such as those in West Virginia, and potentially overseas travel as authorized by the Government. Local travel within the Washington, D.C. commuting area is anticipated and will be reimbursed on a cost-reimbursement basis. All travel must be pre-approved by the COR and coordinated with the COR and CIO as applicable. The Contractor shall ensure that no travel-related costs are incurred without prior written authorization from the COR.

All travel and related expenses shall comply with the applicable Federal Travel Regulations (FTR) and Joint Travel Regulations (JTR), as well as the terms of the primary contract. Reimbursement for travel expenses will be receipt-based and subject to the guidelines outlined in the FTR/JTR. The Contractor is responsible for ensuring adherence to all travel policies, including obtaining necessary approvals and maintaining proper documentation for reimbursement. Overseas travel, although not anticipated, may be authorized if required by Government needs and will be subject to the same approval and reimbursement processes.

13.0 Point of Contact

The Contractor submitting proposals shall provide a name and phone number for the POC, along with any subcontractor POC at time of submission. The COR will be the liaison between any designated GTM and the Contracting Officer responsible for coordinating contractual modifications and any required alterations or changes to the basic order. The Department of State COR will be the Certifying Official for invoices. The COR will also provide task order monitoring, task oversight and direction on administrative issues. The COR will be:

[INSERT NAME HERE]

U.S. Department of State
DS/EX/DS/EX/CTO
1801 N. Lynn Street – SA-20
Rosslyn, VA 22209
Commercial: (202) 769-3960

14.0 Funding

14.1 Contract Vehicle and Type

This contract will be Time and Material (T&M). The blanket T&M contract vehicle will provide flexible support to the DS/EX/CTO FO, with each division having separate CLINs for labor, travel, overtime, training, and other applicable services. This allows for precise funding, reporting, and task-level oversight throughout the PoP.

14.2 Invoice Approval

All invoices submitted under this contract must be reviewed and approved by the COR prior to submission for payment. For Time and Materials labor services, invoices must be supported by detailed time records or timecard reports. Any other direct costs must include prior U.S. Government (USG) approval and be accompanied by supporting documentation, such as receipts, to substantiate the expenses. The Contractor is responsible for ensuring that all invoices are accurate, complete, and comply with the terms of the contract.

To ensure accurate allocation of labor costs across multiple CTO projects, all contractors must track and report their hours worked by project. Each contractor will record their hours daily, through the IPP billing system of record, using project-specific identifier provided by the Government. Monthly invoices must clearly identify the number of hours worked on each project, supported by detailed timesheets coded with the appropriate projects IDs, as part of the invoicing package. This process enables the Government to verify labor charges, confirm contractor effort aligns with project deliverables, and maintain full accountability for all billed hours. The contractor shall submit these invoices and supporting timesheets as part of the required monthly deliverables found in the [Performance Work Statement](#) section.

At the conclusion of the contract, closeout procedures will be initiated within 90 days, in accordance with FAR 42.708. The Contractor must submit a release of claims document through the designated IT system to finalize costs and resolve any outstanding invoiced amounts. This process does not preclude The Contractor right to collect funds for previously invoiced but unpaid amounts. All final costs and claims must be reconciled and documented as part of the contract closeout process.

14.3 Surge Activities

The Contractor shall provide scalable and adaptable surge capabilities to support development across multiple applications and projects simultaneously. Surge activities must ensure that ongoing support for other applications and task areas is not diminished or interrupted. This flexibility is critical to addressing urgent requirements, advancing technology, and meeting dynamic operational demands.

14.3.1 Key Requirements

- **Surge Contract Line-Item Number (CLIN):** The contract includes a dedicated Surge CLIN to accommodate immediate adjustments to staffing and services, ensuring rapid response to operational needs.
- **Real Time Staffing Adjustments:** The Contractor must promptly adjust staffing levels and resources to meet surge demands. Personnel must be capable of supporting multiple projects and divisions, ensuring continuity across all task areas.
- **Dedicated Talent:** The Contractor must have the ability to adjust staffing profiles and resources in real time to meet surge demands. Personnel must be capable of supporting multiple projects and divisions, rather than being limited to a single task area.

14.3.2 Surge Activation Protocol

To promote fiscal accountability and operational discipline, the Contractor shall adhere to the listed surge activation protocols. These measures ensure surge operations remain responsive, transparent, and cost controlled, while supporting mission critical needs without compromising other deliverables.

- **Pre-Approval Requirement:** Surge activities must be pre-approved in writing by the COR, with no retroactive approvals permitted.
- **Cost Thresholds:** A Not-to-Exceed (NTE) amount for surge activities shall be established per surge event and/or monthly, as agreed upon in the contract.

- **Response Timeframe:** The Contractor shall mobilize surge resources within 48 to 72 hours of receiving written COR approval.

14.3.3 Coordination and Approval

- **Pre-Approval Requirement:** All surge activities must be pre-approved in writing by the COR. Retroactive approvals are not permitted.
- **Documentation:** The Contractor must submit a written justification for each surge activation, detailing the operational need, scope of effort, expected duration, and projected costs. Documentation must comply with FAR (15.404 and 7.503), DOSA (642.1502), and DOSAM requirements.
- **Coordination:** Surge requirements will be coordinated with the COR and other designated management personnel to ensure alignment with contract terms and operational priorities.

14.3.4 Execution of Activities

- **Operational Discipline:** Surge activities must be executed efficiently and effectively, adhering to all contractual and regulatory requirements.
- **Efficient and Effective Execution:** Surge activities must be executed efficiently and effectively to meet urgent operational needs.

14.3.5 Compliance Monitoring and Reporting

The Contractor shall maintain detailed records of all surge activities, including resource allocation, costs, and work products, and submit a Surge Activity Report as part of the MSR. This report shall summarize surge hours billed, deliverables produced, and budget utilization against the approved surge ceiling. The COR reserves the right to request random audits of surge charges. Repeated non-compliance with surge protocols, including exceeding NTE amounts, lack of pre-approvals, or failure to submit proper justifications—may result in invoice withholding, negative CPARS evaluations, or other contractual remedies in accordance with FAR 42.1503 and DOSAR 642.1502.

14.4 Other Direct Costs

Other Direct Costs (ODCs) are expenses directly tied to the performance of this contract but are not included in labor or indirect costs. These costs must be reasonable, allowable, and allocable under FAR, DOSAR, and DOSAM. ODCs may include equipment purchases, travel, training, and overtime, among other items.

14.4.1 Separate Contract Line-Item Numbers (CLINs)

To ensure proper tracking and accountability, ODCs will be categorized under separate CLINs for the following:

- **Labor:** Dedicated CLINs shall be established for labor categories under this contract. Labor CLINs represent the primary cost of contract performance and are separate from ODC CLINs, which are reserved for incidental costs such as equipment, travel, training, and overtime.
- **Travel:** Travel costs must be supported by receipts that include the type of flight, travel dates, traveler's full name, and total cost in US dollars. All travel must be pre-approved by the COR or designee.
- **Training:** Training costs, including user training, training materials, and documentation, must directly relate to the scope of work. Training costs incurred during IT systems development or implementation must be capitalized.
- **Overtime:** Overtime costs must be charged directly to the agency fund site of the requesting office or visitor. These costs cannot be included in shared administrative budgets, such as ICASS.

14.4.2 Documentation and Compliance

All ODCs must be pre-approved in writing by the COR. The COR must provide detailed documentation for all ODCs, including receipts, invoices, and cost justifications. Any costs incurred without prior approval may not be reimbursed. The Contractor is responsible for ensuring all ODCs comply with applicable FAR, DOSAR, and DOSAM regulations. Costs must be reasonable, allowable, and directly related to the contract. Any disallowed costs will not be reimbursed.

14.4.3 Monitoring and Reporting

The Contractor must maintain detailed records of all ODCs and include a summary in the MSR. This summary must include: ODC expenditures by category (equipment, travel, training, overtime), supporting documentation for each expense, and budget utilization against the approved ODC ceiling. The COR reserves the right to audit ODC charges at any time. Non-compliance with ODC requirements, including lack of pre-approval, missing documentation, or exceeding approved amounts, may result in invoice withholding, negative CPARS evaluations, or other contractual remedies.

14.5 Equipment Procurements

This contract will be established as a T&M vehicle, allowing the Bureau to procure toner, IT consumables, and Video Teleconference (VTC)-related equipment as needed throughout each performance period.⁴ In addition, this contract will include Order-Level Materials (OLM) authority, in accordance with GSAR 552.238-82 and FAR 8.403(b), permitting the acquisition of incidental materials and services directly supporting the installation, integration, or maintenance of IT and VTC systems. Thus, this contract will establish a vehicle for an Enterprise IT and Audio-Visual Consumables Contract with OLM Provisions.⁵ This combined structure provides the flexibility to consolidate multiple recurring Enterprise IT Components and AV supply requirements under a single, compliant vehicle, thus reducing administrative burden, leveraging economies of scale, and ensuring uninterrupted mission support. It aligns with FAR 16.601(c)(1), which permits the use of T&M contracts when the exact quantity of materials or level of effort cannot be predicted in advance, and supports the Department's objective to maintain secure annual operational communications and IT environments, worldwide.

14.5.1 Enterprise IT Component Upgrades and Replacement

The upgrades and replacements of Enterprise IT components under this T&M contract will align with the Department's IT acquisition policies, modular contracting principles, and FAR guidelines to ensure compliance, efficiency, and accountability.

- **Scope of Upgrades and Replacements:** Enterprise IT component upgrades and replacements will include hardware, software, and peripheral devices necessary to maintain operational readiness and modernize IT infrastructure. This includes, but is not limited to: Servers, network equipment, storage devices, and end-user computing devices. AV and VTC systems, including microphones, displays, and control systems. IT consumables and components required for repair, replacement, or modernization of existing platforms.⁶

⁴ This approach ensures flexibility in meeting dynamic operational requirements while maintaining compliance with the Bona Fide Needs Rule (31 U.S.C. §1502(a)), ensuring that only current year funding is used for bona fide annual needs.

⁵ These actions are consistent with FAR 7.105(b)(1)(v), which encourages consolidation and strategic sourcing to achieve cost efficiency and operations effectiveness, and FAR 8.405-3(a), which authorizes the establishment of consolidated supply and service procurements through GSA Schedule ordering procedures.

⁶ All upgrades must comply with FAR 11.105, ensuring solutions based and results oriented acquisitions rather than specifying brand names unless justified per FAR 11.105(b) or (c).

- **Performance Based Contracting:** Upgrades and replacements will be performance based, with clearly defined deliverables and performance standards. This ensures accountability and alignment with the Department's e-CPIC reporting requirements and IT modernization goals.
- **Modular Contracting Principles:** Modular contracting principles will be applied to ensure IT components are acquired in increments or useful segments of work. This approach supports timely delivery, reduces risks associated with large-scale acquisitions, and ensures compliance with FAR 39.103.⁷
- **Enterprise Agreements (EAs):** Where applicable, upgrades and replacements will leverage existing EAs, managed by DT/BMP/ITA/SSM. These agreements ensure cost efficiency, standardization, and compliance with Department-wide IT acquisition policies.
- **Security and Compatibility Requirements:** All IT components procured under this contract must meet the Department's security and compatibility standards, ensuring seamless integration with existing systems and adherence to cybersecurity protocols.

14.5.2 Order Level Material (OLM) Provisions

The OLM provisions will allow flexibility in procuring additional materials necessary for IT component upgrades and replacements as well as AV consumables. These provisions will adhere to GSAR 552.238-82 and FAR 8.403(b), ensuring compliance with thresholds and accountability.

- **Scope of OLM Items:** OLM items may include incidental materials and services directly supporting the installation, integration, or maintenance of IT and VTC systems. Examples include: Cables, adapters, mounting kits, microphones, and other components required to maintain or repair Bureau communication and AV systems. Replacement parts for servers, network equipment, and storage devices. Consumables necessary for the operation and maintenance of IT and AV systems.
- **Threshold Compliance:** The total value of OLMs will not exceed 33.33% of the total order value, as stipulated in GSAR guidelines. This ensures that OLMs remain a supplemental procurement mechanisms rather than a primary one.

⁷ Contracts for increments must be awarded within 180 days of solicitation issuance, and delivery must occur within 18 months of contract award.

- **Request and Approval Process:** Requests for OLM items must be documented through a procurement request package, including a Bill of Materials (BOM) and justification for the additional resources. The process will align with the Department's procedures for requesting replacement parts and consumables through systems like the Computerized Maintenance Management System (CMMS).
- **Alignment with Modular Contracting:** OLM items will be procured in increments or useful segments of work, ensuring timely delivery and compliance with modular contracting principles.
- **Accountability and Reporting:** The procurement of OLM items must include appropriate metrics, reporting, and security requirements to ensure compliance with Department policies and FAR provisions.
- **Flexibility for Mission Support:** The OLM authority provides the flexibility to address unforeseen requirements for incidental materials and services, ensuring uninterrupted mission support and operational readiness.

Appendix A – MTS Performance Work Statement

1.0 Introduction

This Performance Work Statement (PWS) supplements the DS/EX/CTO MTS SOW by focusing exclusively on the activities and deliverables required to assess, monitor, and manage contractor performance and the administration of the contract. While the SOW outlines the specific IT-related tasks, technical requirements, and deliverables expected from Contractors, this PWS defines how the CTO MTS will oversee and evaluate those efforts to ensure compliance, quality, and alignment with the SOW.

The PWS establishes the framework for tracking, reporting, and responding to Contractor performance, with an emphasis on contract administration and project management. It provides a clear set of expectations for Contractor deliverables related to administrative and management actions, as well as the processes for monitoring technical deliverables associated with agile methodologies and the Software Development Life Cycle (SDLC). It also establishes regular check ins with DS identified Government Technical Monitors (GTMs) to provide day to day technical oversight in project management and supplement and support CORs who manage contractual compliance.

In summary, the SOW specifies the IT management and technical tasks required of contractors, while the PWS focuses on the oversight mechanisms and performance metrics necessary to ensure those tasks are completed effectively and in accordance with contract requirements.

2.0 Performance Requirements

2.1 Administrative Deliverables and Actions

The Contractor shall provide deliverables that ensure efficient, accurate, and timely performance of all tasks in compliance with contract requirements, federal regulations, and Department of State policies. Deliverables must align with applicable standards, including FAR, DOSAR, DOSAM, FITARA, FISMA, CIO Act, PMI, and Agile methodologies, where relevant. All deliverables become Government property and must comply with Freedom of Information Act (FOIA) requirements unless marked proprietary and approved by the Government. Deliverables shall be submitted electronically using Microsoft Office Suite tools

unless otherwise specified by the Contracting Officer's Representative (COR). Hard copies may be requested by the COR.

The Contractor shall schedule and conduct a Project Kick-Off Meeting within seven business days of the contract start date, providing an agenda for COR approval three business days prior. Meeting minutes and action items shall be documented and submitted within five business days of the meeting. The Contractor shall also develop and maintain a Program Management Plan (PMP), Quality Assurance Plan (QAP), and other required plans, ensuring compliance with industry standards and Government expectations. These plans shall be reviewed and updated semi-annually or as needed. Transition activities shall ensure continuity of services during contract phase-in and phase-out periods.

2.1.1 Reports

- **Project Coded Timesheet and Invoice Submission:** The contractor shall submit a monthly invoice package that includes detailed timesheets from the IPP system of record for all T&M personnel (i.e., contractors). Each timesheet must clearly indicate the hours worked by each contractor, broken down by project using Government provided project identifiers. The invoice must summarize total hours and costs by project, matching timesheet data. The contractors will record their daily hours worked, assigning the correct project ID to each entry. At the end of each month, the Contractor will compile all timesheets and prepare an invoice that summarized hours and costs broken down by the project worked on. The contractor will submit the invoice and supporting timesheets to the COR for review and approval. The template for submitting will be up to the contractor, but must be approved by the COR.
- **Monthly Status Reports (MSR):** Use the template provided to provide a rollup of all activities, status, and next steps for the month, including financial updates, risk assessments, and personnel changes.
- **Weekly Status Reports (WSR):** Use the template provided to provide a rollup of all activities, status, and next steps for the week.
- **Quarterly In-Progress Reviews (IPRs):** Use the template provided to prepare and present the IPR using the provided template. The IPR allows contractors to present the status of their contracts to DS/EX/CTO. Ensures compliance with FAR 42.1503 (Contractor Performance Information) and DOSAR 642.1503.

- **After Action Reports (AARs):** Serves as an incident report for documenting outages, deployment/operational failures or non-conformances found with Audio/Visual or Video Teleconferencing System installations. Submit the AAR electronically to the FTE Lead for the FO Team and store it in the identified central repository for Contract Administrative Support Required Artifacts.
- **Meeting Minutes:** Use template to document agenda, attendees, topics, and actions.
- **Trip Reports:** Use template to document information related to any required trip to perform duties.
- **CTO Specific Template:** Utilize the CTO templates provided for presentations and documentation to be consistent with the quality management and standards set by DS/EX/CTO.

2.1.2 Project Plans

- **Program Management Plan (PMP):** Utilize the templates provided to document how contract support will perform. Ensure the PMP tracks all aspects of project execution and aligns with contract objectives. Must include the following plans: **Resource Plan, Communications Plan, Risk Plan, Knowledge Management Plan, Quality Assurance Plan (QAP), Quality Assurance Surveillance Plan (QASP), Activity/Task Plans, IT Security Plan, Continuity of Operations Plan (COOP), Change Management Plan, and Transition Plan.**
- **Action Memo for COR on Task Order:** Use this template to bring up any official action items to be addressed by the COR on specific activities, risks, updates per Task Order on the contract for performance and metrics reporting purposes.

2.2 Technical Agile and Software Development Lifecycle (SDLC) Deliverables and Actions

The Contractor shall follow industry-standard Agile methodologies, such as SCRUM, KANBAN, Lean, and Extreme Programming (XP), to deliver software products and services in small, incremental releases that maximize business value. The contractor shall apply scaled Agile practices to coordinate multiple teams, manage dependencies, mitigate risks, and ensure collaboration across efforts.

The Contractor shall comply with the Department of State's Managing State Projects (MSP) framework, as outlined in 5 FAH-5 H-210, and the CTO's tailored Agile CTO Project Life Cycle (Agile PLC). The Contractor shall integrate required phases, activities, deliverables, and control gates into project plans for all efforts under this contract.

Before starting any project, the Contractor shall complete a Project Tailoring Review Form (PTRF) to identify applicable components based on the project's size, scope, and complexity. The PTRF must be submitted for government approval prior to initiating work. The Contractor shall adhere to guidelines from recognized standards organizations, including PMI, SEI, ISO, and ITIL, and ensure compliance with all applicable CTO policies and procedures.

The following are actions and artifacts that are required as part of the contractor's responsibility for performing IT related work with DS/EX/CTO MTS, *as applicable*. Any custom developed programming code generated must be provided in its raw, digital, un-compiled format, to the TPOC or designee for quality inspection and archival purposes.

- **Portfolio Intake Dashboard:** Receive access and rights to track initiatives, technical debt, and resource capacities.
- **Agile Process Training Report:** Use the template required to request and track training.
- **Implementation Plan:** Use the template to document all actions needed to implement project activities.
- **Project Request Procedure:** Use the template to document all requirements to request a project to start.
- **Product Backlog:** Use the template to document all tasks/activities that are required for the ongoing sprint and Program Increment.
- **Proof of Passing Quality Control Gates:** Use the template to plan and action on each CTO quality control gate during the projects lifecycle.
- **CTO SDLC:** Use the document to understand CTOs SDLC processes to emulate while performing contractual work.
- **CTO Agile Product Lifecycle:** Use the document to understand CTOs Agile Product Lifecycle processes to emulate while performing contractual work.

- **Project Requirements Document and Review:** Use the template to gather project requirements for review and creation of project plans and project request procedures used at CTO.
- **Project Plan:** Use the template to create project plans for each project performed, both IT and non-IT related.
- **Project Closure Checklist:** Use the document to emulate the CTO process for closing out all projects.

3.0 PWS Deliverables/Delivery Schedule

All deliverables must be submitted electronically using Microsoft Office Suite tools unless otherwise specified in SLAs or by your direct report. Hard copies may be requested by the COR. Deliverables must adhere to the timeline specified in the contract, ensuring compliance with FAR, DOSAR, and DOSAM requirements. Deliverables shall adhere to the following timelines:

Table 2 PWS Deliverables Schedule

Deliverable	Template	Due Date	Frequency	Recipient
Reporting Deliverables				
Project Coded Timesheet and Invoice Submission	At Contractor Discretion	No later than the 5 th business day of the following month	Monthly	COR, CO
MSR	Template	By the 10th of the month	Monthly	COR, GTM, and other stakeholders
WSR	Template	By noon on the first business day of following week	Weekly	COR, GTM, and other stakeholders
IPR	Template	During the 1st week following the end of each quarter	Quarterly	COR, GTM, and other stakeholders
AAR	Template SharePoint	Within 72 hours of any unscheduled availability impact	As needed	FTE Lead and SharePoint List

Deliverable	Template	Due Date	Frequency	Recipient
Meeting Minutes	Template	Within three business days	As needed	GTM or FTE Lead
Trip Report	Template	Within three business days	As needed	Division Chief or Unit Lead
Presentations	Template	N/A	N/A	N/A
Documents	Template	N/A	N/A	N/A
Project Planning Deliverables				
PMP	Template	Draft due at Kickoff. Final draft within 30 business days of contract award	Review As needed	TOPC for IT Delivery and CO for Performance Metrics
QAP	Template	Draft within 30 business days of contract award	Semi-annual updates	TOPC for IT Delivery and CO for Performance Metrics
QASP	Template	Draft within 30 business days of contract award	Semi-annual updates	TOPC for IT Delivery and CO for Performance Metrics
Activity or Task	Template	End of Week	Weekly	TOPC for IT Delivery and CO for Performance Metrics
IT Security Plan	Template Best Practices	Draft within 30 business days of initiation	Review Semi-Annually	TOPC for IT Delivery and CO for Performance Metrics
COOP	Template	Draft due within 30 days of Contract Award	Review Annually	TOPC for IT Delivery and CO for Performance Metrics

Deliverable	Template	Due Date	Frequency	Recipient
Change Plan	Template	Draft within 30 business days of initiation	Review Monthly	TOPC for IT Delivery and CO for Performance Metrics
Transition Plan	Template	1 month prior to contract execution. Final Phase Out Plan due 2 weeks prior to contract completion	As needed	TOPC for IT Delivery and CO for Performance Metrics
Knowledge Management Plan	Template	Draft within 30 business days of initiation	Review Annually	TOPC for IT Delivery and CO for Performance Metrics
Resource Plan	Template	Draft within 30 business days of contract award	Review Annually	TOPC for IT Delivery and CO for Performance Metrics
Communications Plan	Template	Draft within 30 business days of contract award	Review Annually	TOPC for IT Delivery and CO for Performance Metrics
Risk Plan	Template	Draft within 30 business days of initiation	Review Annually	TOPC for IT Delivery and CO for Performance Metrics
Action Memo for COR on Task Order	Template	N/A	N/A	COR
Agile and SDLC Artifacts Deliverables				
Portfolio Intake Dashboard	Dashboard	Update as needed	As Needed	TOPC for IT Delivery and

Deliverable	Template	Due Date	Frequency	Recipient
				CO for Performance Metrics
Agile Process Training Report	Template Training Request	Create as needed	As Needed	TOPC for IT Delivery and CO for Performance Metrics
Implementation Plan	Template	Create as needed	As Needed	TOPC for IT Delivery and CO for Performance Metrics
Project Request Procedure	Template	Create as needed	As Needed	TOPC for IT Delivery and CO for Performance Metrics
Product Backlog	Template	Update as needed	As Needed	TOPC for IT Delivery and CO for Performance Metrics
Proof of Passing Quality Control Gates	Template	Create as needed	As Needed	TOPC for IT Delivery and CO for Performance Metrics
CTO SDLC	Document	N/A	N/A	TOPC for IT Delivery and CO for Performance Metrics
CTO Agile Product Lifecycle	Document	N/A	N/A	TOPC for IT Delivery and CO for Performance Metrics

Deliverable	Template	Due Date	Frequency	Recipient
Project Requirements Document and Review	Template	Create as needed	As Needed	TOPC for IT Delivery and CO for Performance Metrics
Project Plan	Template	Create as needed	As Needed	TOPC for IT Delivery and CO for Performance Metrics

4.0 Acceptance Criteria and Compliance Standards

Refer to the [MTS SOW Section 6.0 Acceptance Criteria and Compliance Standards](#) for all instructions regarding the required actions and deliverables.

5.0 Adherence to Policy or Standards

Refer to the [MTS SOW Section 7.0 Adherence to Policy or Standards](#) for all instructions regarding the required actions and deliverables.

6.0 Point of Contact

Refer to the [MTS SOW Section 13.0 Point of Contact](#).

Appendix B – Required Resources and Position Descriptions

This section outlines the resources, position descriptions, and labor categories required to fulfill the contract's objectives. It provides a detailed required resource table (Table 3) that identifies each position and aligns each position with its corresponding labor category. Each position description (PD) includes a clear summary of the role's responsibilities, required qualifications, certifications, and skills, ensuring alignment with the contract's scope and federal standards. This structured approach ensures transparency, consistency, and a shared understanding of the expertise and capabilities needed to successfully execute the contract.

Table 3 Required Resources

Title	Unit	Quantity	Labor Category
Microsoft Office 365 Support	O365	3	(1) SharePoint Developer II (2) Senior Application Developer
UI/UX Developer	O365	4	(2) Junior UI/UX Designer (1) UI/UX Designer – Intermediate (1) Senior UI/UX Designer
CI/CD Engineer	SDP	2	(1) Systems Engineer Level I (Junior) (1) Systems Engineer Level II (Intermediate)
Search Developer	SDP	2	(1) Search Developer Level II (Intermediate) (Part Time) (1) Search Developer Level III (Senior) (Part Time)
Data Engineer	SDP	1	Data Analyst/ BI Analyst Level II (Intermediate)
ETL Developer	SDP	1	ETL Developer II
BI Developer	SDP	1	Data Analyst II
BI Developer	PMCI	1	Data Analyst II
IDOL Developer	SDP	1	Software Developer Level I (Junior)
EDP Technician and Data Lead	SDP	1	Senior Data Architect
.Net Developer	SDP	1	.NET Developer – Intermediate
.Net Developer	CDSO	1	.NET Developer – Intermediate
Solutions Architect	DAU	2	Senior Solutions Architect
Business Analyst	DAU	1	Senior Business Analyst
Business Analyst	OBEAP	2	(1) Junior Business Analyst (1) Senior Business Analyst

Title	Unit	Quantity	Labor Category
<u>Dynamics Developer</u>	DAU	5	(3) Software Engineer Level II (2) Sr. Microsoft Dynamics 365 Developer
<u>Systems Architect</u>	DAU	1	Solutions Architect (Intermediate)
<u>Tester</u>	DAU	4	(1) Tester Level I (3) Tester Level II
<u>Tester</u>	OBEAP	1	Tester Level III
<u>Cloud Architect</u>	DAU	1	Senior Cloud Architect
<u>Automation Tester</u>	DAU	1	Automation Tester (Intermediate)
<u>Training SME</u>	DAU	1	Training Specialist Level II
<u>Enterprise Architect</u>	DAU	1	Enterprise Architect (Intermediate)
<u>Biometrics Developer</u>	DAU	1	Biometrics Application Engineer - Intermediate
<u>Network Administrator - SE</u>	CDSO	2	(1) Junior Systems Engineer (1) Systems Engineer (Intermediate)
<u>ServiceNow Developer</u>	CDSO	3	(2) ServiceNow Developer (1) ServiceNow Developer II
<u>DevSecOps Engineer</u>	CDSO	1	Senior Systems Engineer
<u>Cloud Engineer / Architect</u>	CDSO	1	Junior Systems Engineer
<u>Power Platform Developer</u>	CDSO	1	Power Platform Developer
<u>Database Administrator</u>	CDSO	3	(1) Junior Database Administrator (1) Database Administrator (Intermediate) (1) Senior Database Administrator
<u>Configuration Manager</u>	CDSO	1	Junior Systems Administrator
<u>Developer</u>	CDSO	1	Software Engineer / Developer

<u>Technical Writer</u>	OBEAP	1	Junior Technical Writer
<u>Solutions Architect</u>	OBEAP	1	Solutions Architect Level II

Title	Unit	Quantity	Labor Category
<u>Systems Engineer</u>	OBEAP	1	Junior Systems Engineer

Position Descriptions

Microsoft Office 365 Support

IT Specialist (SharePoint Developer - Intermediate) is responsible for designing, implementing, and maintaining IT systems and SharePoint solutions to support organizational goals. This role focuses on mid-level technical expertise, ensuring systems are optimized for performance, security, and scalability. **Senior IT Specialist (SharePoint Developer)** is a highly experienced professional responsible for leading the design, implementation, and optimization of complex IT systems and SharePoint solutions. This role involves strategic planning, advanced technical expertise, and leadership in system architecture and development. The **Senior Application Developer** is an experienced professional responsible for designing, developing, and deploying customized solutions within Microsoft Dynamics 365 and the Power Platform. This role focuses on creating tailored applications, optimizing data flows, and enhancing business processes using platform-specific tools. The developer collaborates with system architects, database administrators, and end-users to deliver scalable and secure solutions that align with organizational goals. They follow Agile/Scrum methodologies and DevSecOps practices to ensure efficient and compliant development processes.

Major Duties and Responsibilities

[IT Specialist (SharePoint Developer - Intermediate)] Design and implement IT systems and SharePoint solutions based on organizational requirements. Configure and maintain SharePoint environments, including permissions and workflows. Troubleshoot and resolve system and SharePoint-related issues. Collaborate with stakeholders to gather requirements and develop solutions. Perform system upgrades and patches to ensure security and functionality. Develop documentation for system configurations and processes. Monitor system performance and recommend improvements. Provide user training and support for SharePoint and IT systems. Ensure compliance with organizational IT policies and standards. Support integration of SharePoint with other enterprise systems. **[Senior IT Specialist (SharePoint Developer)]** Lead the design and implementation of enterprise IT systems and SharePoint solutions. Develop and enforce best practices for system architecture and SharePoint governance. Provide advanced troubleshooting and

resolve critical system issues. Mentor junior staff and provide technical leadership to project teams. Collaborate with stakeholders to align IT systems with organizational goals. Conduct system audits and ensure compliance with security standards. Develop and maintain system documentation and training materials. Integrate SharePoint with other enterprise applications and systems. Manage system upgrades, migrations, and performance tuning. Represent IT in strategic planning and decision-making processes. The **Senior Application Developer** creates customized applications and workflows in Dynamics 365 modules, including Sales, Customer Service, and Field Service. Develops and integrate Power Platform components, such as Power Automate, PowerApps, and Dataverse, to enhance functionality. Streamlines data flows and business processes using Dynamics 365 and Power Platform tools. Interface with system architects, database administrators, and end-users to gather requirements and deliver tailored solutions. Participates in Agile/Scrum development processes to ensure iterative and efficient delivery of solutions. Incorporates security and compliance measures into development workflows to meet federal standards. Conduct thorough testing and debugging to ensure reliability, performance, and security of applications. Creates and maintain technical documentation for application designs, workflows, and integrations. Ensure solutions adhere to federal regulations, security standards, and organizational policies. Provide guidance and training to end-users and technical teams on application functionality and best practices.

Professional Qualifications/Skills[**IT Specialist (SharePoint Developer - Intermediate)**] Bachelor's degree in IT, Computer Science, or a related field. 3–7 years of experience in IT systems engineering or SharePoint development. Proficiency in SharePoint configuration, workflows, and permissions. Experience with system troubleshooting and performance optimization. Knowledge of IT security protocols and best practices. Strong problem-solving and analytical skills. Ability to work collaboratively with cross-functional teams. Familiarity with scripting languages (e.g., PowerShell) for automation. Excellent communication and documentation skills. Relevant certifications (e.g., Microsoft Certified: SharePoint Administrator) preferred. [**Senior IT Specialist (SharePoint Developer)**] Bachelor's or Master's degree in IT, Computer Science, or a related field. 7–12 years of experience in IT systems engineering or SharePoint development. Expertise in

SharePoint architecture, workflows, and integrations. Advanced knowledge of IT security, compliance, and governance. Strong leadership and mentoring skills. Proficiency in scripting languages (e.g., PowerShell) and automation tools. Excellent problem-solving and critical-thinking abilities. Experience with cloud-based systems and hybrid environments. Relevant certifications (e.g., Microsoft Certified: SharePoint Solutions Expert). Exceptional communication and stakeholder management skills. The **Senior Application Developer** possesses a Bachelor's degree in Computer Science, Software Engineering, or a related field. 6–10 years of experience in application development, with a focus on Dynamics 365 and Power Platform solutions. Proficiency in C#, JavaScript, TypeScript, and Dynamics 365 SDK for advanced customization. Hands-on experience with Power Automate, PowerApps, and Dataverse for application development and integration. Strong knowledge of data modeling, workflows, and process automation within Dynamics 365. Ability to work effectively with cross-functional teams, including architects, database administrators, and end-users. Familiarity with Agile/Scrum methodologies for iterative development and delivery. Understanding of federal standards, such as FISMA, NIST, and FedRAMP, for secure application development. Preferred certifications include Microsoft Certified: Power Platform Developer Associate or Dynamics 365 Developer Associate. Strong analytical and troubleshooting skills to address complex technical challenges.

Program Analyst

The SME III or Senior Program Analyst is a highly experienced professional responsible for providing expert-level analysis, guidance, and recommendations to support program management and decision-making. This role involves advanced expertise in program evaluation, strategic planning, and stakeholder engagement to ensure the successful execution of complex initiatives.

Major Duties and Responsibilities

Provide expert-level analysis and recommendations to support program goals and objectives. Develop and implement strategies for program evaluation and improvement. Analyze program data to identify trends, risks, and opportunities. Collaborate with stakeholders to align program activities with organizational priorities. Prepare detailed reports, presentations, and briefings for leadership. Monitor program performance and ensure compliance with policies and regulations.

Conduct research to support program planning and decision-making. Develop and maintain documentation for program processes and activities. Represent the program in meetings and discussions with internal and external stakeholders. Mentor junior analysts and provide technical guidance.

Professional Qualifications/Skills

Bachelor's or Master's degree in Business Administration, Public Policy, or a related field. 10+ years of experience in program analysis, management, or related roles. Expertise in program evaluation, strategic planning, and data analysis. Strong knowledge of federal policies, regulations, and compliance standards. Excellent problem-solving and critical-thinking abilities. Exceptional communication and presentation skills. Proficiency in program management tools (e.g., MS Project, JIRA). Certifications such as PMP (Project Management Professional) or Six Sigma preferred. Strong leadership and mentoring skills. Familiarity with emerging technologies and data visualization tools (e.g., Tableau, Power BI) is a plus.

UI/UX Developer

The UI/UX Designer (Intermediate) is responsible for designing and developing user interfaces and experiences for web and software applications. This role involves mid-level expertise in creating intuitive, visually appealing, and functional designs that enhance user satisfaction. **The Senior UI/UX Designer** is a highly experienced professional responsible for leading the design and development of user interfaces and experiences. This role involves strategic planning, advanced technical expertise, and leadership in creating innovative and user-friendly solutions.

Major Duties and Responsibilities

[UI/UX Designer (Intermediate)] Design user interfaces and experiences for web and software applications. Create wireframes, prototypes, and mockups based on user requirements. Develop front-end components using HTML, CSS, and JavaScript. Conduct usability testing and analyze user feedback to improve designs. Collaborate with developers, stakeholders, and product teams to ensure design alignment. Maintain design consistency across applications and platforms. Optimize designs for accessibility and responsiveness. Document design processes, guidelines, and standards. Stay updated on UI/UX trends and emerging technologies. Troubleshoot and resolve design-related issues. **[Senior UI/UX Designer]** Lead the design and development of user interfaces and experiences for web and software applications. Develop and enforce UI/UX design standards and best practices.

Conduct advanced usability testing and analyze user feedback for strategic improvements. Collaborate with stakeholders to align designs with business objectives. Mentor junior designers and developers, providing technical guidance. Optimize designs for accessibility, scalability, and responsiveness. Represent UI/UX in strategic planning and decision-making processes. Document design frameworks, processes, and guidelines. Stay updated on emerging UI/UX trends and technologies. Troubleshoot and resolve complex design-related issues.

Professional Qualifications/Skills

[UI/UX Designer (Intermediate)] Bachelor's degree in Graphic Design, Computer Science, or a related field. 3–7 years of experience in UI/UX design or front-end development. Proficiency in design tools (e.g., Adobe XD, Figma, Sketch). Strong knowledge of front-end development languages (HTML, CSS, JavaScript). Familiarity with accessibility standards and responsive design principles. Experience with usability testing and user-centered design methodologies. Excellent problem-solving and analytical skills. Strong communication and collaboration abilities. Portfolio showcasing design and development projects. Certifications in UI/UX design or front-end development preferred. **[Senior UI/UX Designer]** Bachelor's or Master's degree in Graphic Design, Computer Science, or a related field. 7–12 years of experience in UI/UX design and development. Expertise in design tools (e.g., Adobe XD, Figma, Sketch) and front-end development languages. Advanced knowledge of accessibility standards and responsive design principles. Strong leadership and mentoring skills. Experience with strategic planning and stakeholder engagement. Excellent problem-solving and critical-thinking abilities. Portfolio showcasing innovative and complex design projects. Certifications in UI/UX design or front-end development preferred. Familiarity with emerging technologies (e.g., AI, AR/VR) is a plus.

CI/CD Engineer

The **DevOps Engineer (Junior)** is an entry-level role focused on supporting the development, deployment, and maintenance of IT systems and applications. This position involves foundational knowledge of DevOps practices and systems engineering. The **DevOps Engineer (Intermediate)**

Major Duties and Responsibilities

DevOps Engineer (Junior) Assist in the development and deployment of IT systems and applications. Support automation of build, test, and deployment processes. Monitor system performance and troubleshoot issues. Collaborate with senior engineers to implement DevOps practices. Maintain system documentation and configuration records. Perform routine system updates and patches. Support integration of new technologies into existing systems. Provide user support and training for IT systems. Ensure compliance with organizational IT policies and standards. Stay updated on DevOps tools and methodologies. **DevOps Engineer (Intermediate)**

Professional Qualifications/Skills

[DevOps Engineer (Junior)] Bachelor's degree in IT, Computer Science, or a related field. 0–3 years of experience in DevOps or systems engineering. Basic knowledge of DevOps tools (e.g., Jenkins, Docker, Kubernetes). Familiarity with scripting languages (e.g., Python, Bash) for automation. Strong problem-solving and analytical skills. Ability to work collaboratively in a team environment. Excellent communication and documentation skills. Willingness to learn and adapt to new technologies. Certifications in DevOps or systems engineering are preferred. Familiarity with cloud platforms (e.g., AWS, Azure) is a plus. **[DevOps Engineer (Intermediate)]**

Search Developer

These positions will be billed as Part Time. The **Search Developer (Intermediate)** is responsible for designing, developing, and maintaining search functionality and software applications. This role involves mid-level expertise in search technologies, software development, and system integration to enhance user experience and system performance. The **Search Developer (Senior)** is a highly experienced professional responsible for leading the design, development, and optimization of search functionality and software applications. This role involves advanced technical expertise and leadership in delivering innovative solutions.

Major Duties and Responsibilities

[Search Developer (Intermediate)] Design and develop search functionality for web and software applications. Implement and optimize search algorithms and indexing processes. Develop and maintain software applications using programming languages such as Java, Python, or C#. Integrate search technologies with existing systems and applications. Troubleshoot and resolve issues related to search

functionality and software performance. Collaborate with stakeholders to gather requirements and deliver solutions. Conduct testing and debugging to ensure system reliability. Document development processes, configurations, and best practices. Stay updated on emerging search technologies and software development trends. Support system upgrades and migrations as needed. **[Search Developer (Senior)]** Lead the design and development of advanced search functionality and software applications. Develop and optimize complex search algorithms and indexing processes. Provide technical leadership and mentorship to junior developers. Collaborate with stakeholders to align search and software solutions with business objectives. Conduct advanced troubleshooting and resolve critical system issues. Integrate search technologies with enterprise systems and applications. Ensure compliance with security and performance standards. Document system architectures, configurations, and best practices. Stay updated on emerging technologies and industry trends. Represent the development team in strategic planning and decision-making.

Professional Qualifications/Skills

[Search Developer (Intermediate)] Bachelor's degree in Computer Science, IT, or a related field. 3–7 years of experience in software development or search technologies. Proficiency in programming languages such as Java, Python, or C#. Experience with search platforms (e.g., Elasticsearch, Solr, or Microsoft Search). Strong problem-solving and analytical skills. Familiarity with system integration and API development. Knowledge of database systems and query optimization. Excellent communication and documentation skills. Certifications in software development or search technologies preferred. Familiarity with cloud-based search solutions is a plus. **[Search Developer (Senior)]** Bachelor's or master's degree in computer sciences, IT, or a related field. 7–12 years of experience in software development or search technologies. Expertise in programming languages such as Java, Python, or C#. Advanced knowledge of search platforms (e.g., Elasticsearch, Solr, or Microsoft Search). Strong leadership and mentoring skills. Proficiency in system integration and API development. Excellent problem-solving and critical-thinking abilities. Certifications in software development or search technologies preferred. Experience with cloud-based search solutions and big data platforms is a plus. Exceptional communication and stakeholder management skills.

Data Engineer

The Data Engineer (Intermediate) is responsible for designing, building, and maintaining data pipelines and performing data analysis to support organizational decision-making. This role involves mid-level expertise in data engineering, analytics, and database management.

Major Duties and Responsibilities

Design and develop data pipelines to collect, process, and store data. Perform data analysis to identify trends, patterns, and insights. Collaborate with stakeholders to understand data requirements and deliver solutions. Optimize data storage and retrieval processes for performance and scalability. Develop and maintain data models, schemas, and documentation. Ensure data quality, integrity, and security. Support the integration of data from multiple sources into a unified system. Conduct testing and debugging of data pipelines and analytics tools. Stay updated on emerging data engineering and analytics technologies. Provide user training and support for data tools and systems.

Professional Qualifications/Skills

Bachelor's degree in data science, Computer Science, or a related field. 3–7 years of experience in data engineering or analytics. Proficiency in programming languages such as Python, SQL, or R. Experience with data pipeline tools (e.g., Apache Airflow, Talend) and ETL processes. Strong knowledge of database systems (e.g., MySQL, PostgreSQL, or NoSQL). Familiarity with data visualization tools (e.g., Tableau, Power BI). Excellent problem-solving and analytical skills. Strong communication and collaboration abilities. Certifications in data engineering or analytics preferred. Familiarity with cloud-based data platforms (e.g., AWS, Azure) is a plus.

ETL Developer

The ETL Developer is responsible for designing, developing, and maintaining ETL (Extract, Transform, Load) processes to support data integration and analytics. This role involves mid-level expertise in ETL tools, data pipelines, and database management.

Major Duties and Responsibilities

Design and develop ETL processes to extract, transform, and load data from various sources. Collaborate with stakeholders to understand data integration requirements. Optimize ETL workflows for performance, scalability, and reliability. Monitor and troubleshoot ETL processes to ensure data accuracy and integrity. Develop and

maintain documentation for ETL processes and data flows. Support the integration of data from multiple systems into a unified platform. Conduct testing and debugging of ETL workflows and tools. Ensure compliance with data security and governance standards. Stay updated on emerging ETL tools and technologies. Provide user training and support for ETL tools and processes.

Professional Qualifications/Skills

Bachelor's degree in data science, Computer Science, or a related field. 3–7 years of experience in ETL development or data integration. Proficiency in ETL tools (e.g., Informatica, Talend, Apache Nifi). Strong knowledge of database systems (e.g., SQL Server, Oracle, or NoSQL). Experience with programming languages such as Python or Java. Familiarity with data modeling and schema design. Excellent problem-solving and analytical skills. Strong communication and collaboration abilities. Certifications in ETL or data integration tools preferred. Familiarity with cloud-based ETL solutions (e.g., AWS Glue, Azure Data Factory) is a plus.

BI Developer

The Data Analyst/BI Analyst (Intermediate) is responsible for designing and implementing BI solutions to support data-driven decision-making. This role involves expertise in data visualization, analytics, and reporting tools. The Data Analyst/BI Analyst (Senior)

Major Duties and Responsibilities

[Data Analyst/BI Analyst (Intermediate)] Design and develop BI dashboards and reports using tools such as Tableau or Power BI. Perform data analysis to identify trends, patterns, and actionable insights. Collaborate with stakeholders to gather requirements and deliver BI solutions. Optimize BI tools and processes for performance and scalability. Develop and maintain documentation for BI solutions and data models. Ensure data quality, accuracy, and consistency in BI reports. Support the integration of BI tools with enterprise systems. Conduct testing and debugging of BI solutions. Stay updated on emerging BI tools and technologies. Provide user training and support for BI tools and processes. **[Data Analyst/BI Analyst (Senior)]**

Professional Qualifications/Skills

[Data Analyst/BI Analyst (Intermediate)] Bachelor's degree in Data Science, Computer Science, or a related field. 5–10 years of experience in BI development or

data analytics. Proficiency in BI tools (e.g., Tableau, Power BI, Qlik). Strong knowledge of database systems and query optimization. Experience with programming languages such as Python or R. Familiarity with data modeling and schema design. Excellent problem-solving and analytical skills. Strong communication and collaboration abilities. Certifications in BI tools or data analytics preferred. Familiarity with cloud-based BI solutions is a plus. **[Data Analyst/BI Analyst (Senior)]**

IDOL Developer

The **Software Developer (Senior)** is responsible for designing, developing, and maintaining software applications to meet organizational needs. This role involves expertise in programming, system integration, and software optimization. The **Senior Data Architect** is responsible for designing and implementing enterprise-wide data architectures and strategies to support organizational goals. This role involves advanced expertise in data governance, modeling, and analytics.

Major Duties and Responsibilities

[Software Developer (Senior)] Design and develop software applications using programming languages such as Java, Python, or C#. Collaborate with stakeholders to gather requirements and deliver solutions. Optimize software for performance, scalability, and reliability. Troubleshoot and resolve software-related issues. Conduct testing and debugging to ensure system functionality. Integrate software applications with enterprise systems and databases. Develop and maintain documentation for software designs and processes. Stay updated on emerging software development tools and technologies. Ensure compliance with security and performance standards. Mentor junior developers and provide technical guidance.

[Senior Data Architect] Develop and implement enterprise data architectures and strategies. Design data models, schemas, and frameworks to support analytics and reporting. Ensure data quality, integrity, and security across systems. Collaborate with stakeholders to align data strategies with business objectives. Conduct system assessments and recommend improvements. Integrate data from multiple sources into unified platforms. Document data architectures, processes, and governance frameworks. Stay updated on emerging data technologies and trends. Represent data strategy in strategic planning and decision-making. Mentor junior data architects and analysts.

Professional Qualifications/Skills

[Software Developer (Senior)] Bachelor's degree in Computer Science, IT, or a related field. 3–7 years of experience for Intermediate; 7–12 years for Senior roles. Proficiency in programming languages such as Java, Python, or C#. Strong knowledge of software development methodologies (e.g., Agile, Scrum). Experience with system integration and API development. Familiarity with database systems and query optimization. Excellent problem-solving and analytical skills. Certifications in software development or programming preferred. Familiarity with cloud-based software solutions is a plus. Strong communication and collaboration abilities. **[Senior Data Architect]** Bachelor's or Master's degree in Data Science, Computer Science, or a related field. 10+ years of experience in data architecture or strategy. Expertise in data modeling, governance, and analytics. Advanced knowledge of database systems (e.g., SQL Server, Oracle, NoSQL). Strong leadership and mentoring skills. Proficiency in data integration tools and platforms. Excellent problem-solving and critical-thinking abilities. Certifications in data architecture or analytics preferred. Familiarity with cloud-based data solutions (e.g., AWS, Azure) is a plus. Exceptional communication and stakeholder management skills.

EDP Technician and Data Lead

The Data Lead (Data Engineer (Senior)) is responsible for leading the design, implementation, and optimization of enterprise data systems and architectures. This role involves strategic planning, advanced technical expertise, and leadership in data engineering.

Major Duties and Responsibilities

Lead the design and implementation of enterprise data systems and architectures. Develop and enforce best practices for data governance and management. Optimize data pipelines and workflows for performance and scalability. Collaborate with stakeholders to align data systems with organizational goals. Conduct system audits and ensure compliance with security standards. Integrate data from multiple sources into unified platforms. Document system architectures, processes, and governance frameworks. Stay updated on emerging data technologies and trends. Represent data engineering in strategic planning and decision-making. Mentor junior engineers and architects.

Professional Qualifications/Skills

Bachelor's or Master's degree in Data Science, Computer Science, or a related field. 10+ years of experience in data engineering or architecture. Expertise in data pipeline tools (e.g., Apache Airflow, Talend) and ETL processes. Advanced knowledge of database systems (e.g., SQL Server, Oracle, NoSQL). Strong leadership and mentoring skills. Proficiency in programming languages such as Python, SQL, or R. Excellent problem-solving and critical-thinking abilities. Certifications in data engineering or architecture preferred. Familiarity with cloud-based data solutions (e.g., AWS, Azure) is a plus. Exceptional communication and stakeholder management skills.

.Net Developer

The **.NET Developer (Intermediate)** is responsible for designing, developing, and maintaining applications using the .NET framework. This role involves mid-level expertise in programming, system integration, and application optimization. The **Senior .NET Developer** is a highly experienced professional responsible for leading the design, development, and optimization of applications using the .NET framework. This role involves advanced technical expertise and leadership in delivering innovative solutions.

Major Duties and Responsibilities

[.NET Developer (Intermediate)] Design and develop applications using the .NET framework. Collaborate with stakeholders to gather requirements and deliver solutions. Optimize applications for performance, scalability, and reliability. Troubleshoot and resolve application-related issues. Conduct testing and debugging to ensure system functionality. Integrate applications with enterprise systems and databases. Develop and maintain documentation for application designs and processes. Stay updated on emerging .NET tools and technologies. Ensure compliance with security and performance standards. Support system upgrades and migrations as needed. **[Senior .NET Developer (Lead)]** Lead the design and development of advanced applications using the .NET framework. Develop and optimize complex application architectures and workflows. Provide technical leadership and mentorship to junior developers. Collaborate with stakeholders to align applications with business objectives. Conduct advanced troubleshooting and resolve critical system issues. Integrate applications with enterprise systems and databases. Ensure compliance with security and performance standards. Document system architectures, configurations, and best practices. Stay updated on

emerging .NET tools and technologies. Represent the development team in strategic planning and decision-making.

Professional Qualifications/Skills

[.NET Developer (Intermediate)] Bachelor's degree in Computer Science, IT, or a related field. 3–7 years of experience in .NET development. Proficiency in programming languages such as C#, VB.NET, or ASP.NET. Strong knowledge of software development methodologies (e.g., Agile, Scrum). Experience with system integration and API development. Familiarity with database systems and query optimization. Excellent problem-solving and analytical skills. Certifications in .NET development preferred. Familiarity with cloud-based .NET solutions is a plus. Strong communication and collaboration abilities. **[Senior .NET Developer (Lead)]** Bachelor's or Master's degree in Computer Science, IT, or a related field. 7–12 years of experience in .NET development. Expertise in programming languages such as C#, VB.NET, or ASP.NET. Advanced knowledge of software development methodologies (e.g., Agile, Scrum). Strong leadership and mentoring skills. Proficiency in system integration and API development. Excellent problem-solving and critical-thinking abilities. Certifications in .NET development preferred. Experience with cloud-based .NET solutions and big data platforms is a plus. Exceptional communication and stakeholder management skills.

Solutions Architect

The Senior Solutions Architect or Enterprise Architect is a strategic role responsible for designing and implementing enterprise-wide IT solutions that align with organizational goals. This position involves advanced technical expertise, leadership, and collaboration with stakeholders to ensure scalable and secure architectures. Responsible for designing and implementing IT solutions that address complex business challenges. This role involves advanced technical expertise, collaboration with stakeholders, and leadership in delivering innovative and efficient systems.

Major Duties and Responsibilities

Develop and implement enterprise IT architectures and solutions. Lead the design of scalable, secure, and high-performance systems. Collaborate with stakeholders to align IT solutions with business objectives. Provide technical leadership and guidance to project teams. Conduct system assessments and recommend improvements. Ensure compliance with security and regulatory standards. Integrate new technologies into existing systems and processes. Develop documentation for

system designs and architectures. Represent IT in strategic planning and decision-making. Mentor junior architects and engineers.

Professional Qualifications/Skills

Bachelor's or Master's degree in IT, Computer Science, or a related field. 10+ years of experience in IT architecture and solution design. Expertise in enterprise systems, cloud computing, and hybrid environments. Advanced knowledge of security, compliance, and governance. Strong leadership and mentoring skills. Proficiency in architecture frameworks (e.g., TOGAF, Zachman). Excellent problem-solving and critical-thinking abilities. Relevant certifications (e.g., AWS Solutions Architect, Microsoft Certified: Azure Architect). Exceptional communication and stakeholder management skills. Experience with emerging technologies (e.g., AI, IoT) preferred.

Business Analyst

The **Junior Business Analyst** is an entry-level role focused on supporting the analysis and documentation of business processes and requirements. This position involves foundational knowledge of business analysis and collaboration with stakeholders to deliver solutions. The **Senior Business Analyst** is responsible for leading the analysis and documentation of complex business processes and requirements. This role involves advanced expertise in business analysis, stakeholder engagement, and strategic planning.

Major Duties and Responsibilities

[Junior Business Analyst] Assist in gathering and documenting business requirements. Analyze business processes and identify areas for improvement. Support the development of process workflows and diagrams. Collaborate with stakeholders to understand organizational needs. Prepare reports and presentations for senior analysts and managers. Conduct research to support business analysis activities. Test and validate solutions to ensure they meet requirements. Maintain documentation for business processes and systems. Stay updated on business analysis tools and methodologies. Provide administrative support for business analysis projects. **[Senior Business Analyst]** Lead the gathering and documentation of business requirements. Analyze complex business processes and recommend improvements. Develop process workflows, diagrams, and documentation. Collaborate with stakeholders to align solutions with organizational goals. Conduct research and analysis to support strategic decision-making. Test and validate solutions to ensure they meet requirements. Prepare reports and presentations for

executive leadership. Mentor junior analysts and provide technical guidance. Stay updated on business analysis tools and methodologies. Represent business analysis in strategic planning and decision-making.

Professional Qualifications/Skills

[Junior Business Analyst] Bachelor's degree in Business Administration, IT, or a related field. 0–3 years of experience in business analysis or a related role. Basic knowledge of business analysis tools (e.g., Visio, JIRA). Strong analytical and problem-solving skills. Excellent communication and documentation abilities. Ability to work collaboratively in a team environment. Familiarity with process improvement methodologies (e.g., Lean, Six Sigma). Willingness to learn and adapt to new technologies. Certifications in business analysis (e.g., CBAP, CCBA) preferred. Familiarity with Agile or Scrum methodologies is a plus. **[Senior Business Analyst]** Bachelor's or Master's degree in Business Administration, IT, or a related field. 7–12 years of experience in business analysis or a related role. Expertise in business analysis tools (e.g., Visio, JIRA). Advanced knowledge of process improvement methodologies (e.g., Lean, Six Sigma). Strong leadership and mentoring skills. Excellent problem-solving and critical-thinking abilities. Certifications in business analysis (e.g., CBAP, CCBA) preferred. Familiarity with Agile or Scrum methodologies. Exceptional communication and stakeholder management skills. Experience with strategic planning and decision-making processes.

Dynamics Developer

The **[Software Engineer (Level II)]** is a mid-level professional responsible for developing, customizing, and maintaining software applications to meet organizational needs. This role focuses on creating user interfaces, workflows, and business logic, as well as integrating APIs to ensure seamless functionality. The Software Engineer Level II often works with low-code/no-code platforms and extends commercial off-the-shelf (COTS) software to enhance capabilities and improve efficiency. They collaborate with stakeholders to deliver scalable, secure, and user-friendly solutions. The **[(Senior Microsoft Dynamics 365 Developer)]** is an experienced professional specializing in the design, development, and customization of Microsoft Dynamics 365 solutions. This role focuses on application development, including creating user interfaces, workflows, business logic, and integrating APIs to meet organizational needs. The developer often works

with low-code/no-code tools and extends commercial off-the-shelf (COTS) software, such as Dynamics 365, to enhance functionality and improve efficiency. They collaborate with stakeholders to deliver scalable, secure, and tailored solutions that align with business objectives.

Major Duties and Responsibilities

[The Software Engineer (Level II)] designs, develops, and customizes software applications to meet specific business requirements. Builds and optimizes user interfaces to ensure intuitive and efficient user experiences. Implements workflows and business logic to automate processes and improve functionality. Integrate third-party APIs and services to enhance application capabilities and interoperability. Develops and maintain solutions using low-code/no-code platforms to accelerate delivery timelines. Customizes and extend commercial off-the-shelf (COTS) software to meet unique organizational needs. Conduct thorough testing and debugging to ensure software reliability and performance. Create and maintain technical documentation for software designs, workflows, and integrations. Works closely with stakeholders, including business users and IT teams, to gather requirements and deliver solutions. Ensures software solutions adhere to federal regulations, security standards, and organizational policies. The **[(Senior Microsoft Dynamics 365 Developer)]** designs, develops, and customize Dynamics 365 applications to meet specific business requirements. Builds and optimize user interfaces within Dynamics 365 for intuitive and efficient user experiences. Implements workflows, business rules, and custom logic to automate processes and improve functionality. Dynamics 365 with third-party APIs and services to enhance capabilities and interoperability. Maintains solutions using Microsoft Power Platform tools, such as Power Apps and Power Automate, and extend Dynamics 365 modules, including Sales, Customer Service, and Finance, to meet unique organizational needs. Conduct thorough testing and debugging of Dynamics 365 solutions to ensure reliability and performance. Creates and maintain technical documentation for Dynamics 365 configurations, workflows, and integrations. closely with stakeholders, including business users and IT teams, to gather requirements and deliver tailored solutions. Ensures Dynamics 365 solutions adhere to federal regulations, security standards, and organizational policies.

Professional Qualifications/Skills

[(Software Engineer (Level II))] Bachelor's degree in Computer Science, Software Engineering, or a related field; equivalent experience may be considered. 3–5 years of experience in software development, application customization, or related roles. Proficiency in programming languages such as Java, Python, JavaScript, or C#. Experience with platforms like Microsoft Power Apps, Salesforce, or ServiceNow. Familiarity with RESTful APIs, JSON, and XML for system integration. Hands-on experience customizing and extending COTS software solutions. Strong skills in software testing, debugging, and performance optimization. Ability to work effectively with cross-functional teams and communicate technical concepts clearly. Familiarity with federal standards, such as FISMA, NIST, and FedRAMP, for secure software development. Relevant certifications, such as Microsoft Certified: Power Platform Developer or Salesforce Platform Developer, are highly desirable. The **[(Senior Microsoft Dynamics 365 Developer)]** Bachelor's degree in Computer Science, Software Engineering, or a related field; equivalent experience may be considered. 5+ years of experience in software development, with at least 3 years specializing in Microsoft Dynamics 365 development. in C#, JavaScript, TypeScript, and Dynamics 365 SDK for advanced customization. Experience with Microsoft Power Platform tools, including Power Apps, Power Automate, and Power BI. Familiarity with RESTful APIs, OData, and JSON for system integration. Hands-on experience customizing and extending Dynamics 365 modules and solutions. Strong skills in software testing, debugging, and performance optimization for Dynamics 365 applications. Ability to work effectively with cross-functional teams and communicate technical concepts clearly. Familiarity with federal standards, such as FISMA, NIST, and FedRAMP, for secure software development. Relevant certifications, such as Microsoft Certified: Dynamics 365 Developer Associate or Power Platform Developer, are highly desirable.

Systems Architect

The Systems Architect (Intermediate) is responsible for designing and implementing IT architectures to support organizational goals. This role involves mid-level expertise in system integration, scalability, and security.

Major Duties and Responsibilities

Design and implement IT architectures to meet organizational needs. Develop system designs that ensure scalability, security, and performance. Collaborate with stakeholders to gather requirements and deliver solutions. Integrate new technologies into existing systems and processes. Conduct system assessments and recommend improvements. Document system designs, configurations, and best practices. Ensure compliance with security and regulatory standards. Support system upgrades and migrations as needed. Stay updated on emerging technologies and industry trends. Provide technical guidance to development teams.

Professional Qualifications/Skills

Bachelor's degree in IT, Computer Science, or a related field. 3–7 years of experience in IT architecture or systems design. Proficiency in system integration and API development. Strong knowledge of security, compliance, and governance. Excellent problem-solving and analytical skills. Certifications in IT architecture frameworks (e.g., TOGAF, Zachman) preferred. Familiarity with cloud-based systems and hybrid environments. Strong communication and collaboration abilities. Experience with Agile or Scrum methodologies is a plus. Familiarity with emerging technologies (e.g., AI, IoT) is a plus.

Tester

The **Junior Tester** is an entry-level role focused on supporting the testing and quality assurance of software applications and systems. This position involves foundational knowledge of testing methodologies and collaboration with development teams. The **Tester (Intermediate)** is responsible for performing detailed testing and quality assurance of software applications and systems. This role involves mid-level expertise in testing methodologies, tools, and collaboration with development teams. The **Senior Tester** is responsible for leading the testing and quality assurance of complex software applications and systems. This role involves advanced expertise in testing methodologies, leadership, and collaboration with stakeholders.

Major Duties and Responsibilities

[Junior Tester] Assist in testing software applications and systems to ensure functionality. Execute test cases and document results. Identify and report bugs and issues to development teams. Collaborate with developers to resolve issues and improve system reliability. Support the development of test plans and test scripts. Conduct basic performance and usability testing. Maintain documentation for testing

processes and results. Stay updated on testing tools and methodologies. Provide administrative support for quality assurance activities. Ensure compliance with organizational testing standards. **[Tester (Intermediate)]** Develop and execute test plans and test cases for software applications. Perform functional, performance, and usability testing. Identify, document, and report bugs and issues to development teams. Collaborate with developers to resolve issues and improve system reliability. Optimize testing processes for efficiency and scalability. Maintain documentation for testing processes and results. Ensure compliance with organizational testing standards. Conduct testing for system upgrades and migrations. Stay updated on emerging testing tools and methodologies. Provide user training and support for testing tools. **[Senior Tester]** Lead the development and execution of test plans and test cases. Perform advanced functional, performance, and usability testing. Identify, document, and resolve critical bugs and issues. Provide technical leadership and mentorship to junior testers. Collaborate with stakeholders to align testing processes with organizational goals. Optimize testing processes for efficiency and scalability. Document testing frameworks, processes, and best practices. Ensure compliance with security and performance standards. Stay updated on emerging testing tools and methodologies. Represent quality assurance in strategic planning and decision-making.

Professional Qualifications/Skills

[Junior Tester] Bachelor's degree in IT, Computer Science, or a related field. 0–3 years of experience in software testing or quality assurance. Basic knowledge of testing tools (e.g., Selenium, JIRA). Strong attention to detail and analytical skills. Excellent communication and documentation abilities. Ability to work collaboratively in a team environment. Familiarity with Agile or Scrum methodologies is a plus. Willingness to learn and adapt to new technologies. Certifications in software testing (e.g., ISTQB) preferred. Familiarity with basic programming concepts is a plus. **[Tester (Intermediate)]** Bachelor's degree in IT, Computer Science, or a related field. 3–7 years of experience in software testing or quality assurance. Proficiency in testing tools (e.g., Selenium, JIRA, TestRail). Strong knowledge of testing methodologies and best practices. Excellent problem-solving and analytical skills. Certifications in software testing (e.g., ISTQB) preferred. Familiarity with Agile or Scrum methodologies. Strong communication and collaboration abilities. Experience with automated testing tools is a plus.

Familiarity with basic programming concepts is a plus. **[Senior Tester]** Bachelor's or master's degree in IT, Computer Science, or a related field. 7–12 years of experience in software testing or quality assurance. Expertise in testing tools (e.g., Selenium, JIRA, TestRail). Advanced knowledge of testing methodologies and best practices. Strong leadership and mentoring skills. Certifications in software testing (e.g., ISTQB) preferred. Familiarity with Agile or Scrum methodologies. Exceptional communication and stakeholder management skills. Experience with automated testing tools and frameworks. Familiarity with emerging technologies (e.g., AI, IoT) is a plus.

Cloud Architect

The Senior Cloud Architect or Enterprise Architect is responsible for designing and implementing enterprise-wide cloud solutions and IT architectures that align with organizational goals. This role involves advanced technical expertise, strategic planning, and leadership in delivering scalable and secure systems.

Major Duties and Responsibilities

Design and implement enterprise cloud architectures and solutions. Lead the development of scalable, secure, and high-performance systems. Collaborate with stakeholders to align cloud solutions with business objectives. Provide technical leadership and guidance to project teams. Conduct system assessments and recommend improvements. Ensure compliance with security and regulatory standards. Integrate new technologies into existing systems and processes. Document system designs, architectures, and best practices. Represent IT in strategic planning and decision-making. Mentor junior architects and engineers.

Professional Qualifications/Skills

Bachelor's or Master's degree in IT, Computer Science, or a related field. 10+ years of experience in IT architecture and cloud solution design. Expertise in cloud platforms (e.g., AWS, Azure, Google Cloud). Advanced knowledge of security, compliance, and governance. Strong leadership and mentoring skills. Proficiency in architecture frameworks (e.g., TOGAF, Zachman). Excellent problem-solving and critical-thinking abilities. Relevant certifications (e.g., AWS Solutions Architect, Microsoft Certified: Azure Architect). Exceptional communication and stakeholder management skills. Experience with emerging technologies (e.g., AI, IoT) preferred.

Automation Tester

The Automation Tester or QA Automation Engineer (Intermediate) is responsible for developing and executing automated testing frameworks to ensure the quality and reliability of software applications. This role involves mid-level expertise in automation tools and testing methodologies.

Major Duties and Responsibilities

Develop and maintain automated testing frameworks and scripts. Execute automated tests to validate software functionality and performance. Identify and report bugs and issues to development teams. Collaborate with developers to resolve issues and improve system reliability. Optimize automated testing processes for efficiency and scalability. Document testing frameworks, processes, and results. Ensure compliance with organizational testing standards. Conduct testing for system upgrades and migrations. Stay updated on emerging automation tools and technologies. Provide user training and support for testing tools.

Professional Qualifications/Skills

Bachelor's degree in IT, Computer Science, or a related field. 3–7 years of experience in software testing or quality assurance. Proficiency in automation tools (e.g., Selenium, Appium, TestNG). Strong knowledge of testing methodologies and best practices. Excellent problem-solving and analytical skills. Certifications in software testing (e.g., ISTQB) preferred. Familiarity with Agile or Scrum methodologies. Strong communication and collaboration abilities. Experience with CI/CD pipelines and integration testing. Familiarity with programming languages (e.g., Python, Java) is a plus.

Training SME

The Training Specialist is responsible for developing and delivering training programs to enhance organizational knowledge and skills. This role involves mid-level expertise in instructional design, training delivery, and subject matter expertise.

Major Duties and Responsibilities

Develop and deliver training programs to meet organizational needs. Create training materials, including presentations, manuals, and e-learning modules. Conduct training sessions for employees and stakeholders. Assess training needs and recommend solutions. Evaluate the effectiveness of training programs and make improvements. Collaborate with subject matter experts to develop content. Maintain documentation for training processes and materials. Stay updated on emerging

training tools and methodologies. Ensure compliance with organizational training standards. Provide support for onboarding and professional development initiatives.

Professional Qualifications/Skills

Bachelor's degree in Education, Business Administration, or a related field. 3–7 years of experience in training or instructional design. Proficiency in training tools (e.g., Articulate, Captivate, LMS platforms). Strong knowledge of instructional design principles and methodologies. Excellent communication and presentation skills. Certifications in training or instructional design (e.g., CPTD, ATD) preferred. Familiarity with e-learning development tools and technologies. Strong problem-solving and analytical skills. Ability to work collaboratively in a team environment. Experience with professional development and onboarding programs.

Enterprise Architect

The Enterprise Architect (Intermediate) is responsible for designing and implementing IT architectures to support organizational goals. This role involves mid-level expertise in system integration, scalability, and security.

Major Duties and Responsibilities

Design and implement IT architectures to meet organizational needs. Develop system designs that ensure scalability, security, and performance. Collaborate with stakeholders to gather requirements and deliver solutions. Integrate new technologies into existing systems and processes. Conduct system assessments and recommend improvements. Document system designs, configurations, and best practices. Ensure compliance with security and regulatory standards. Support system upgrades and migrations as needed. Stay updated on emerging technologies and industry trends. Provide technical guidance to development teams.

Professional Qualifications/Skills

Bachelor's degree in IT, Computer Science, or a related field. 3–7 years of experience in IT architecture or systems design. Proficiency in system integration and API development. Strong knowledge of security, compliance, and governance. Excellent problem-solving and analytical skills. Certifications in IT architecture frameworks (e.g., TOGAF, Zachman) preferred. Familiarity with cloud-based systems and hybrid environments. Strong communication and collaboration abilities. Experience with Agile or Scrum methodologies is a plus. Familiarity with emerging technologies (e.g., AI, IoT) is a plus.

Biometrics Developer

The Biometrics Applications Engineer (Intermediate) is responsible for designing and implementing biometric systems and applications to support organizational needs. This role involves mid-level expertise in biometric technologies, software development, and system integration.

Major Duties and Responsibilities

Design and develop biometric systems and applications. Implement biometric algorithms and technologies for authentication and identification. Integrate biometric systems with enterprise applications and databases. Troubleshoot and resolve issues related to biometric functionality. Conduct testing and debugging to ensure system reliability. Collaborate with stakeholders to gather requirements and deliver solutions. Document system architectures, configurations, and best practices. Stay updated on emerging biometric tools and technologies. Ensure compliance with security and performance standards. Support system upgrades and migrations as needed.

Professional Qualifications/Skills

Bachelor's degree in Computer Science, IT, or a related field. 3–7 years of experience in biometric development or specialized software development. Proficiency in programming languages (e.g., Python, Java, C++). Strong knowledge of biometric technologies (e.g., fingerprint, facial recognition). Familiarity with database systems and query optimization. Excellent problem-solving and analytical skills. Certifications in biometric technologies preferred. Familiarity with cloud-based biometric solutions is a plus. Strong communication and collaboration abilities. Experience with Agile or Scrum methodologies is a plus.

Network Administrator – SE

The **Junior Systems Engineer** is an entry-level role responsible for supporting the configuration, maintenance, and troubleshooting of network systems and IT infrastructure. This position involves foundational knowledge of networking and systems engineering. The **Systems Engineer (Intermediate)** is responsible for configuring, maintaining, and optimizing network systems and IT infrastructure to support organizational goals. This role involves mid-level expertise in networking and systems engineering.

Major Duties and Responsibilities

[Junior Systems Engineer] Assist in configuring and maintaining network systems and IT infrastructure. Monitor network performance and troubleshoot connectivity issues. Support the installation and configuration of hardware and software. Perform routine system updates and patches. Collaborate with senior engineers to implement network solutions. Document network configurations and processes. Ensure compliance with organizational IT policies and standards. Provide user support and training for network systems. Conduct basic security assessments and implement corrective actions. Stay updated on emerging networking tools and technologies.

[Systems Engineer (Intermediate)] Configure and maintain network systems and IT infrastructure. Monitor and optimize network performance and reliability. Troubleshoot and resolve complex connectivity issues. Implement security measures to protect network systems. Collaborate with stakeholders to gather requirements and deliver solutions. Document network configurations, processes, and best practices. Perform system upgrades, migrations, and patches. Support the integration of new technologies into existing systems. Ensure compliance with security and regulatory standards. Provide user training and support for network systems.

Professional Qualifications/Skills

[Junior Systems Engineer] Bachelor's degree in IT, Computer Science, or a related field. 0–3 years of experience in network administration or systems engineering. Basic knowledge of networking protocols (e.g., TCP/IP, DNS, DHCP). Familiarity with network hardware (e.g., routers, switches, firewalls). Strong problem-solving and analytical skills. Certifications such as CompTIA Network+ or CCNA preferred. Excellent communication and documentation abilities. Ability to work collaboratively in a team environment. Willingness to learn and adapt to new technologies. Familiarity with cloud-based networking solutions is a plus. **[Systems Engineer (Intermediate)]** Bachelor's degree in IT, Computer Science, or a related field. 3–7 years of experience in network administration or systems engineering. Proficiency in networking protocols (e.g., TCP/IP, DNS, DHCP). Strong knowledge of network hardware (e.g., routers, switches, firewalls). Certifications such as CompTIA Network+, CCNA, or CCNP preferred. Excellent problem-solving and analytical skills. Familiarity with cloud-based networking solutions (e.g., AWS, Azure). Strong communication and collaboration abilities. Experience with network monitoring tools (e.g., SolarWinds, Wireshark). Familiarity with Agile or Scrum methodologies is a plus.

ServiceNow Developer

The **Junior ServiceNow Developer** is an entry-level role focused on supporting the development and customization of ServiceNow applications to meet organizational needs. This position involves foundational knowledge of ServiceNow and IT service management (ITSM). The **ServiceNow Developer (Intermediate)** is responsible for designing, developing, and maintaining ServiceNow applications to support organizational goals. This role involves mid-level expertise in ServiceNow customization, integration, and optimization.

Major Duties and Responsibilities

[Junior ServiceNow Developer] Assist in developing and customizing ServiceNow applications. Configure workflows, forms, and dashboards within ServiceNow. Collaborate with stakeholders to gather requirements and deliver solutions. Troubleshoot and resolve issues related to ServiceNow functionality. Conduct testing and debugging to ensure system reliability. Document ServiceNow configurations and processes. Support system upgrades and migrations as needed. Provide user training and support for ServiceNow applications. Stay updated on emerging ServiceNow tools and technologies. Ensure compliance with organizational IT policies and standards. **[ServiceNow Developer (Intermediate)]** Design and develop ServiceNow applications and workflows. Customize ServiceNow modules to meet organizational needs. Integrate ServiceNow with other enterprise systems and databases. Troubleshoot and resolve issues related to ServiceNow functionality. Conduct testing and debugging to ensure system reliability. Document ServiceNow configurations, processes, and best practices. Collaborate with stakeholders to gather requirements and deliver solutions. Optimize ServiceNow applications for performance and scalability. Stay updated on emerging ServiceNow tools and technologies. Ensure compliance with security and performance standards.

Professional Qualifications/Skills

[Junior ServiceNow Developer] Bachelor's degree in IT, Computer Science, or a related field. 0–3 years of experience in ServiceNow development or ITSM. Basic knowledge of ServiceNow platform and modules. Familiarity with scripting languages (e.g., JavaScript, HTML, CSS). Strong problem-solving and analytical skills. Certifications such as ServiceNow Certified System Administrator preferred. Excellent communication and documentation abilities. Ability to work

collaboratively in a team environment. Willingness to learn and adapt to new technologies. Familiarity with ITIL processes is a plus. **[ServiceNow Developer (Intermediate)]** Bachelor's degree in IT, Computer Science, or a related field. 3–7 years of experience in ServiceNow development or ITSM. Proficiency in ServiceNow platform and modules. Strong knowledge of scripting languages (e.g., JavaScript, HTML, CSS). Certifications such as ServiceNow Certified Application Developer preferred. Excellent problem-solving and analytical skills. Familiarity with ITIL processes and best practices. Strong communication and collaboration abilities. Experience with ServiceNow integrations and APIs. Familiarity with cloud-based ITSM solutions is a plus.

DevSecOps Engineer

The Senior DevSecOps Engineer or Senior Systems Engineer is responsible for leading the design, implementation, and optimization of secure DevSecOps pipelines and IT systems. This role involves advanced technical expertise, leadership, and collaboration with stakeholders.

Major Duties and Responsibilities

Lead the design and implementation of secure DevSecOps pipelines. Develop and enforce best practices for system security and automation. Collaborate with stakeholders to align DevSecOps processes with organizational goals. Conduct system assessments and recommend improvements. Integrate security measures into CI/CD pipelines and IT systems. Document system architectures, configurations, and best practices. Ensure compliance with security and regulatory standards. Stay updated on emerging DevSecOps tools and technologies. Represent DevSecOps in strategic planning and decision-making. Mentor junior engineers and provide technical guidance.

Professional Qualifications/Skills

Bachelor's or Master's degree in IT, Computer Science, or a related field. 7–12 years of experience in DevSecOps or systems engineering. Expertise in CI/CD tools (e.g., Jenkins, GitLab, Azure DevOps). Advanced knowledge of security protocols and best practices. Strong leadership and mentoring skills. Proficiency in scripting languages (e.g., Python, Bash). Excellent problem-solving and critical-thinking abilities. Certifications in DevSecOps or systems engineering preferred. Familiarity with cloud-based systems and hybrid environments. Exceptional communication and stakeholder management skills.

Cloud Engineer / Architect

The Junior Cloud Engineer is an entry-level role focused on supporting the design, implementation, and maintenance of cloud-based systems and IT infrastructure. This position involves foundational knowledge of cloud platforms and systems engineering.

Major Duties and Responsibilities

Assist in configuring and maintaining cloud-based systems and IT infrastructure. Monitor system performance and troubleshoot basic issues. Support the deployment of applications and services in cloud environments. Collaborate with senior engineers to implement cloud solutions. Perform routine system updates, patches, and backups. Document system configurations and processes. Ensure compliance with organizational IT policies and standards. Provide user support and training for cloud-based systems. Conduct basic security assessments and implement corrective actions. Stay updated on emerging cloud tools and technologies.

Professional Qualifications/Skills

Bachelor's degree in IT, Computer Science, or a related field. 0–3 years of experience in cloud engineering or systems engineering. Basic knowledge of cloud platforms (e.g., AWS, Azure, Google Cloud). Familiarity with networking protocols and system administration. Strong problem-solving and analytical skills. Certifications such as AWS Certified Cloud Practitioner or Microsoft Azure Fundamentals preferred. Excellent communication and documentation abilities. Ability to work collaboratively in a team environment. Willingness to learn and adapt to new technologies. Familiarity with scripting languages (e.g., Python, Bash) is a plus.

Power Platform Developer

The Power Platform Developer (Intermediate) is responsible for designing, developing, and maintaining applications within the Microsoft Power Platform or Dynamics environment. This role involves mid-level expertise in customization, integration, and optimization.

Major Duties and Responsibilities

Design and develop applications within the Microsoft Power Platform or Dynamics environment. Customize workflows, forms, and entities to meet organizational needs. Integrate Power Platform or Dynamics with other enterprise systems and databases. Troubleshoot and resolve issues related to functionality and performance.

Conduct testing and debugging to ensure system reliability. Collaborate with stakeholders to gather requirements and deliver solutions. Document configurations, processes, and best practices. Optimize applications for performance and scalability. Stay updated on emerging tools and technologies within the Power Platform or Dynamics ecosystem. Ensure compliance with security and performance standards.

Professional Qualifications/Skills

Bachelor's degree in Computer Science, IT, or a related field. 3–7 years of experience in Power Platform or Dynamics development. Proficiency in Power Apps, Power Automate, or Dynamics customization. Strong knowledge of programming languages (e.g., C#, JavaScript). Familiarity with database systems and query optimization. Excellent problem-solving and analytical skills. Certifications such as Microsoft Certified: Power Platform Developer or Dynamics Developer preferred. Familiarity with cloud-based solutions is a plus. Strong communication and collaboration abilities. Experience with Agile or Scrum methodologies is a plus.

Database Administrator

The **Junior Database Administrator** is an entry-level role focused on supporting the configuration, maintenance, and troubleshooting of database systems. This position involves foundational knowledge of database management and system optimization. The **Database Administrator (Intermediate)** is responsible for configuring, maintaining, and optimizing database systems to support organizational goals. This role involves mid-level expertise in database management and system integration. The **Senior Database Administrator** is responsible for leading the design, implementation, and optimization of complex database systems to support organizational goals. This role involves advanced technical expertise, leadership, and collaboration with stakeholders.

Major Duties and Responsibilities

[Junior Database Administrator] Assist in configuring and maintaining database systems. Monitor database performance and troubleshoot basic issues. Support the installation and configuration of database software. Perform routine database updates, patches, and backups. Collaborate with senior administrators to optimize database performance. Document database configurations and processes. Ensure compliance with organizational data policies and standards. Provide user support and training for database systems. Conduct basic security assessments and implement corrective actions. Stay updated on emerging database tools and

technologies. **[Database Administrator (Intermediate)]** Configure and maintain database systems to meet organizational needs. Monitor and optimize database performance and reliability. Troubleshoot and resolve complex database issues. Implement security measures to protect database systems. Collaborate with stakeholders to gather requirements and deliver solutions. Document database configurations, processes, and best practices. Perform system upgrades, migrations, and patches. Support the integration of new technologies into existing systems. Ensure compliance with security and regulatory standards. Provide user training and support for database systems. **[Senior Database Administrator (Lead)]** Lead the design and implementation of advanced database systems. Develop and enforce best practices for database management and optimization. Collaborate with stakeholders to align database systems with organizational goals. Conduct system assessments and recommend improvements. Implement security measures to protect database systems. Document system architectures, configurations, and best practices. Ensure compliance with security and regulatory standards. Stay updated on emerging database tools and technologies. Represent database administration in strategic planning and decision-making. Mentor junior administrators and provide technical guidance.

Professional Qualifications/Skills

[Junior Database Administrator] Bachelor's degree in IT, Computer Science, or a related field. 0–3 years of experience in database administration or management. Basic knowledge of database systems (e.g., MySQL, SQL Server, Oracle). Familiarity with database query languages (e.g., SQL). Strong problem-solving and analytical skills. Certifications such as Microsoft Certified: Azure Data Fundamentals or Oracle Database Administrator Associate preferred. Excellent communication and documentation abilities. Ability to work collaboratively in a team environment. Willingness to learn and adapt to new technologies. Familiarity with cloud-based database solutions is a plus. **[Database Administrator (Intermediate)]** Bachelor's degree in IT, Computer Science, or a related field. 3–7 years of experience in database administration or management. Proficiency in database systems (e.g., MySQL, SQL Server, Oracle). Strong knowledge of database query languages (e.g., SQL, PL/SQL). Certifications such as Microsoft Certified: Azure Database Administrator Associate or Oracle Database Administrator Professional preferred. Excellent problem-solving and analytical skills. Familiarity

with cloud-based database solutions (e.g., AWS RDS, Azure SQL Database). Strong communication and collaboration abilities. Experience with database monitoring tools (e.g., SolarWinds, Redgate). Familiarity with Agile or Scrum methodologies is a plus. **[Senior Database Administrator (Lead)]** Bachelor's or Master's degree in IT, Computer Science, or a related field. 7–12 years of experience in database administration or management. Expertise in database systems (e.g., MySQL, SQL Server, Oracle). Advanced knowledge of database query languages (e.g., SQL, PL/SQL). Strong leadership and mentoring skills. Certifications such as Microsoft Certified: Azure Database Administrator Expert or Oracle Database Administrator Professional preferred. Excellent problem-solving and critical-thinking abilities. Familiarity with cloud-based database solutions (e.g., AWS RDS, Azure SQL Database). Exceptional communication and stakeholder management skills. Experience with emerging technologies (e.g., AI, IoT) is a plus.

Configuration Manager

The Junior Configuration Manager or Systems Administrator is an entry-level role focused on supporting the management of system configurations and ensuring the stability and reliability of IT systems. This position involves foundational knowledge of configuration management tools and system administration.

Major Duties and Responsibilities

Assist in managing system configurations and maintaining version control. Support the implementation of configuration management policies and procedures. Monitor system performance and troubleshoot basic issues. Perform routine system updates, patches, and backups. Collaborate with senior administrators to optimize system configurations. Document configuration changes and processes. Ensure compliance with organizational IT policies and standards. Provide user support and training for IT systems. Conduct basic security assessments and implement corrective actions. Stay updated on emerging configuration management tools and technologies.

Professional Qualifications/Skills

Bachelor's degree in IT, Computer Science, or a related field. 0–3 years of experience in configuration management or systems administration. Basic knowledge of configuration management tools (e.g., Ansible, Puppet, Chef). Familiarity with system administration and networking protocols. Strong problem-solving and analytical skills. Certifications such as CompTIA Security+ or ITIL Foundation preferred. Excellent communication and documentation abilities. Ability

to work collaboratively in a team environment. Willingness to learn and adapt to new technologies. Familiarity with cloud-based systems is a plus.

Quality Assurance Manager

The Quality Assurance Manager is responsible for overseeing the quality assurance processes and ensuring the reliability of software applications and systems. This role involves advanced expertise in testing methodologies, leadership, and collaboration with stakeholders.

Major Duties and Responsibilities

Develop and enforce best practices for quality assurance processes. Lead the development and execution of test plans and test cases. Collaborate with stakeholders to align QA processes with organizational goals. Manage QA risks, resources, and budgets. Conduct system assessments and recommend improvements. Document QA frameworks, processes, and best practices. Ensure compliance with security and regulatory standards. Stay updated on emerging QA tools and methodologies. Represent QA in strategic planning and decision-making. Mentor junior QA analysts and provide technical guidance.

Professional Qualifications/Skills

Bachelor's or Master's degree in IT, Computer Science, or a related field. 7–12 years of experience in quality assurance or testing. Expertise in QA tools (e.g., Selenium, JIRA, TestRail). Advanced knowledge of testing methodologies and best practices. Strong leadership and mentoring skills. Certifications in QA or testing (e.g., ISTQB) preferred. Excellent problem-solving and critical-thinking abilities. Familiarity with IT systems and processes. Exceptional communication and stakeholder management skills. Experience with automated testing tools and frameworks.

Developer

The **Junior Developer** is an entry-level role focused on supporting the design, development, and maintenance of software applications. This position involves foundational knowledge of programming languages and software development methodologies. The **Developer (Intermediate)** is responsible for designing, developing, and maintaining software applications to meet organizational needs. This role involves mid-level expertise in programming, system integration, and application optimization. The **Senior Developer** is responsible for leading the design, development, and optimization of software applications to meet complex

organizational needs. This role involves advanced technical expertise, leadership, and collaboration with stakeholders. The **Principal Developer** is responsible for designing and implementing enterprise-level software solutions and architectures. This role involves expert-level technical knowledge, strategic planning, and leadership in software development.

Major Duties and Responsibilities

- Junior Developer
 - Assist in developing and maintaining software applications.
 - Write, test, and debug code to ensure functionality and reliability.
 - Collaborate with senior developers to implement solutions.
 - Support the integration of applications with enterprise systems.
 - Document development processes and configurations.
 - Conduct basic performance testing and optimization.
 - Stay updated on emerging programming tools and technologies.
 - Provide user support and training for software applications.
 - Ensure compliance with organizational IT policies and standards.
 - Participate in team meetings and contribute to project planning.
- Developer (Intermediate)
 - Design and develop software applications using programming languages such as Python, Java, or C#.
 - Collaborate with stakeholders to gather requirements and deliver solutions.
 - Optimize applications for performance, scalability, and reliability.
 - Troubleshoot and resolve software-related issues.
 - Conduct testing and debugging to ensure system functionality.
 - Integrate applications with enterprise systems and databases.
 - Develop and maintain documentation for software designs and processes.
 - Stay updated on emerging software development tools and technologies.
 - Ensure compliance with security and performance standards.
 - Support system upgrades and migrations as needed.
- Senior Developer (Lead)
 - Lead the design and development of advanced software applications.
 - Develop and optimize complex application architectures and workflows.
 - Provide technical leadership and mentorship to junior developers.

- Collaborate with stakeholders to align applications with business objectives.
- Conduct advanced troubleshooting and resolve critical system issues.
- Integrate applications with enterprise systems and databases.
- Ensure compliance with security and performance standards.
- Document system architectures, configurations, and best practices.
- Stay updated on emerging software development tools and technologies.
- Represent the development team in strategic planning and decision-making.
- **Principal Developer or Senior Software Engineer**
 - Design and implement enterprise-level software solutions and architectures.
 - Develop and enforce best practices for software development processes.
 - Collaborate with stakeholders to align software solutions with organizational goals.
 - Conduct system assessments and recommend improvements.
 - Optimize software for performance, scalability, and reliability.
 - Document system architectures, configurations, and best practices.
 - Ensure compliance with security and regulatory standards.
 - Stay updated on emerging software development tools and technologies.
 - Represent software development in strategic planning and decision-making.
 - Mentor junior developers and provide technical guidance.

Professional Qualifications/Skills

- **Junior Developer**
 - Bachelor's degree in Computer Science, IT, or a related field.
 - 0–3 years of experience in software development.
 - Basic knowledge of programming languages (e.g., Python, Java, C#).
 - Familiarity with software development methodologies (e.g., Agile, Scrum).
 - Strong problem-solving and analytical skills.
 - Certifications in software development (e.g., Microsoft Certified: Azure Developer Associate) preferred.
 - Excellent communication and documentation abilities.
 - Ability to work collaboratively in a team environment.
 - Willingness to learn and adapt to new technologies.
 - Familiarity with cloud-based development tools is a plus.
- **Developer (Intermediate)**

- Bachelor's degree in Computer Science, IT, or a related field.
- 3–7 years of experience in software development.
- Proficiency in programming languages such as Python, Java, or C#.
- Strong knowledge of software development methodologies (e.g., Agile, Scrum).
- Experience with system integration and API development.
- Familiarity with database systems and query optimization.
- Excellent problem-solving and analytical skills.
- Certifications in software development preferred.
- Familiarity with cloud-based software solutions is a plus.
- Strong communication and collaboration abilities.
- Senior Developer (Lead)
 - Bachelor's or Master's degree in Computer Science, IT, or a related field.
 - 7–12 years of experience in software development.
 - Expertise in programming languages such as Python, Java, or C#.
 - Advanced knowledge of software development methodologies (e.g., Agile, Scrum).
 - Strong leadership and mentoring skills.
 - Proficiency in system integration and API development.
 - Excellent problem-solving and critical-thinking abilities.
 - Certifications in software development preferred.
 - Experience with cloud-based software solutions and big data platforms is a plus.
 - Exceptional communication and stakeholder management skills.
- Principal Developer or Senior Software Engineer
 - Bachelor's or Master's degree in Computer Science, IT, or a related field.
 - 12+ years of experience in software development or engineering.
 - Expertise in programming languages such as Python, Java, or C#.
 - Advanced knowledge of software development methodologies (e.g., Agile, Scrum).
 - Strong leadership and mentoring skills.
 - Proficiency in system integration and API development.
 - Excellent problem-solving and critical-thinking abilities.

- Certifications in software development preferred.
- Familiarity with cloud-based software solutions and emerging technologies (e.g., AI, IoT).
- Exceptional communication and stakeholder management skills.

Program Manager

The Program Manager (Junior) or Project Manager (Level I) is an entry-level role focused on supporting the planning, coordination, and execution of programs or projects. This position involves foundational knowledge of program and project management methodologies.

Major Duties and Responsibilities

- Assist in planning and coordinating program or project activities.
- Track schedules, deliverables, and milestones.
- Prepare reports and documentation for senior managers.
- Support risk management, resource allocation, and program monitoring.
- Collaborate with stakeholders to gather requirements and ensure alignment.
- Conduct research to support program or project planning.
- Maintain documentation for program or project processes.
- Provide administrative support for program or project management activities.
- Stay updated on program and project management tools and methodologies.
- Ensure compliance with organizational standards.

Professional Qualifications/Skills

- Bachelor's degree in Business Administration, IT, or a related field.
- 0–3 years of experience in program or project management.
- Basic knowledge of program and project management tools (e.g., MS Project, JIRA, Trello).
- Strong organizational and time management skills.
- Excellent communication and documentation abilities.
- Ability to work collaboratively in a team environment.
- Familiarity with Agile or Scrum methodologies is a plus.
- Certifications such as CAPM (Certified Associate in Project Management) preferred.
- Willingness to learn and adapt to new technologies.
- Familiarity with IT systems and processes is a plus.

Technical Writer

The Junior Technical Writer is an entry-level role focused on creating and maintaining technical documentation to support organizational goals. This position involves foundational knowledge of technical writing principles and tools.

Major Duties and Responsibilities

- Assist in creating and maintaining technical documentation.
- Write user manuals, guides, and reports for software and systems.
- Collaborate with subject matter experts to gather information.
- Edit and proofread technical documents for accuracy and clarity.
- Organize and format documentation for ease of use.
- Conduct research to support technical writing activities.
- Maintain documentation repositories and version control.
- Stay updated on technical writing tools and methodologies.
- Ensure compliance with organizational documentation standards.
- Provide administrative support for technical writing projects.

Professional Qualifications/Skills

- Bachelor's degree in English, Communications, IT, or a related field.
- 0–3 years of experience in technical writing.
- Basic knowledge of technical writing tools (e.g., Adobe FrameMaker, MS Word).
- Strong attention to detail and organizational skills.
- Excellent communication and writing abilities.
- Ability to work collaboratively in a team environment.
- Familiarity with IT systems and processes is a plus.
- Certifications in technical writing (e.g., CPTC) preferred.
- Willingness to learn and adapt to new technologies.
- Familiarity with version control systems is a plus.

Systems Engineer

The Junior Systems Engineer is an entry-level role focused on supporting the design, implementation, and maintenance of IT systems and infrastructure. This position involves foundational knowledge of systems engineering principles and tools.

Major Duties and Responsibilities

- Assist in designing and implementing IT systems and infrastructure.
- Monitor system performance and troubleshoot basic issues.

- Support the deployment of applications and services.
- Collaborate with senior engineers to implement solutions.
- Perform routine system updates, patches, and backups.
- Document system configurations and processes.
- Ensure compliance with organizational IT policies and standards.
- Provide user support and training for IT systems.
- Conduct basic security assessments and implement corrective actions.
- Stay updated on emerging systems engineering tools and technologies.

Professional Qualifications/Skills

- Bachelor's degree in IT, Computer Science, or a related field.
- 0–3 years of experience in systems engineering or IT support.
- Basic knowledge of networking protocols and system administration.
- Familiarity with operating systems (e.g., Windows, Linux).
- Strong problem-solving and analytical skills.
- Certifications such as CompTIA Security+ or ITIL Foundation preferred.
- Excellent communication and documentation abilities.
- Ability to work collaboratively in a team environment.
- Willingness to learn and adapt to new technologies.
- Familiarity with cloud-based systems is a plus.
