

SALIENT CHARACTERISTICS
FOR Fabrication T-38 Brake Riveter Rotary Table

- 12" Precision Turntable
- Table Diameter: 12.00", Base Diameter 12.00" – 14.00", Turntable Assembly Total Height: 2.75"
- Table has 12 total lock locations at 30-degree intervals.
- Capable of supporting localized 0.250" diameter rivet forming pressures up to 2,000 PSI on table surface while maintaining rotational capabilities and accuracy.
- Capable of supporting 800 lbs. on table surface while maintaining rotational capabilities and accuracy.
- All bearing surfaces are steel: hardened for toughness and ground for flatness.
- Standard concentricity, 0.000030" Inch, measured by standard ball check procedures.
- Table rotates on precision bearings.
- Has bearings located near the outer periphery of the table for additional stability and accuracy.
- Turntable is sealed to prevent contamination from machine particles, dust, dirt and coolant.
- Tabletop furnished with drilled and tapped holes, base supplied with mounting holes.
