

Statement of Work (SOW)

Statement of Work (SOW)

Retrofit of Glatt GCG-70 Continuous Dry Mixer

1. Background

The **Office of Pharmaceutical Quality Research (OPQR)** supports the modernization of pharmaceutical manufacturing by conducting regulatory science research on emerging technologies. Continuous manufacturing (CM) of oral solid dosage forms has been recognized by the **Food and Drug Administration (FDA)** as an emerging technology.

Continuous process monitoring and manufacturing process control are critical for establishing a robust CM process that consistently produces products of the desired quality while identifying and mitigating manufacturing risks.

Currently, OPQR possesses a **Glatt GCG-70 Inline Continuous Screw Blender-Mixer for Powders (480 Volts), Glatt (CAT#: STEM-GLEPO-0082-LJX)** continuous dry mixer. However, the GCG-70 lacks the capability to communicate with other existing office equipment or systems. To integrate the GCG-70 into a CM production line, a retrofit is required to enable it to interface with a supervisory control system. This upgrade will enhance the functionality and integration capability of the GCG-70.

This requirement includes both **hardware and site services** necessary to retrofit the GCG-70 dry mixer to facilitate signal exchange with other existing equipment. The retrofitted system shall be adaptable to continuous manufacturing operations and support seamless integration with upstream and downstream unit operations. The retrofit will also enable synchronized control of process parameters across unit operations through automated modulation.

This retrofit is essential to support the **New Drug Application (NDA)** and **Abbreviated New Drug Application (ANDA)** review processes for continuous manufacturing applications.

2. Scope of Work

The contractor shall provide all labor, materials, equipment, transportation, and supervision necessary to retrofit the **Glatt GCG-70 Dry Mixer** to enable communication and signal exchange with third-party equipment.

3. Requirements and Deliverables

Item 1 & Item 2: Retrofit of GCG-70 Dry Mixer for Signal Exchange with Third-Party Equipment

The contractor shall ensure that the GCG-70 retrofit meets the following **salient characteristics**:

- Enable electronic communication with the **SIMATIC PCS 7 Distributed Control System (DCS)** to allow integration with other equipment.
- Allow remote control of blender speed, including start/stop, with feedback indicating operational status and actual speed.
- Do **not restrict or inhibit any existing operational capabilities** of the GCG-70, including local control functions.
- Provide a minimum **one (1) year warranty**, including parts and labor, beginning on the date of delivery.
- Provide updated qualification documentation, instruction manuals, engineering drawings/diagrams, and all related equipment documentation associated with the retrofit.

Item 3: Delivery, Installation, and On-Site Commissioning

The contractor shall incur all costs associated with the following:

- Hardware packaging, shipping, and delivery.
- On-site hardware installation.
- On-site commissioning and qualification.

Deliverables Table

Deliverable	Description	Quantity	Delivery Timeframe
Retrofit Hardware	Hardware components required to enable signal exchange between the GCG-70 and third-party equipment	1 Lot	Within the period of performance
Installation Services	On-site installation of retrofit hardware	1 Lot	Upon hardware delivery
Commissioning & Qualification	On-site commissioning and qualification of the retrofitted system	1 Lot	After installation
Documentation Package	Updated qualification documents, manuals, drawings, and related documentation	1 Lot	At time of commissioning
Warranty	Minimum one (1) year warranty including parts and labor	1	Begins upon Government acceptance

4. Delivery Location

Hardware Delivery Location

Attn: Scott Krull
Food and Drug Administration

5901 Ammendale Road
Suite G
Beltsville, MD 20705

5. Place of Performance

Attn: Scott Krull
Food and Drug Administration
5901 Ammendale Road
Suite D
Beltsville, MD 20705

6. Period of Performance

The period of performance shall begin upon contract award and continue through completion of delivery, installation, commissioning, and qualification of the retrofitted GCG-70 system.

The anticipated period of performance is **120 days from the date of award**, unless otherwise agreed upon by the Government and the Contractor.

7. Inspection and Acceptance

The Government will review all deliverables in accordance with the specifications and standards identified in this SOW and any directives issued by the COR.

- The contractor shall submit deliverables to the COR according to the delivery schedule.
 - The contractor shall implement any necessary changes within **10 business days** of receiving change notification.
-
