

Q&A LOG
Healthcare Delivery Solution (HCDS) Electronic Health Record (EHR) Follow On (MHS GENESIS)
HT003826X0000
Date: 19 November 2025

QUESTION #	DATE RECEIVED	Reference	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
1	13-Nov-25	Scope	Is the DoD coordinating contract activities with the VA for a joint contract, or is the intent to continue having separate contract vehicles for both departments?	19-Nov-25	A Memorandum of Understanding (MOU) between the Secretaries of Defense and Veterans Affairs was signed May 23, 2025. It reaffirms both Departments commitments to strengthen the partnership with a focus on delivering quality health care and the seamless delivery of benefits and services. Both Departments are committed to the signed MOU and are formulating the approach. While many details are unknown at this time, we understand that further inter-agency cooperation (to perhaps include joint efforts) is likely.
2	13-Nov-25	General	Does the DoD intend on changing the current structure and resourcing based on the final approach for the SI model, or does the DoD see the current structure as sufficient to operate within a new model?	19-Nov-25	The stucture and resourcing has not been finalized. As briefed during industry day, the Government requested industry to assist in helping us understand the benefit of a system integrator, if multiple system integrators are more appropriate, or if system integration is even needed given the complexity and make up of the current system. (see industry day brief slide # 22)
3	13-Nov-25	Scope	Does the DOD envision a mandated overlap or “dual operations” period between the current and the new contractor(s), and if so, for how long?	19-Nov-25	The Government requested feedback from industry to support this question. Will begin to refine this as feedback is received. (see industry day brief slide #20)
4	13-Nov-25	Scope	What functions does the DOD intend to retain during the transition period (e.g., program oversight, change control, cyber authorization, operations, etc.)?	19-Nov-25	The Government requested feedback from industry to support this question. (see industry day brief slide #20)
5	13-Nov-25	General	Has the DOD performed a comprehensive sustainment baseline review: systems inventory, workflows, functional and technical requirements, SLAs, cyber dependencies, etc.?	19-Nov-25	As part of capability support, the Government started a comprehensive sustainment baseline review and is in the process of updating some of the key documents. The Government views this as a continuous process necessary to maintain a comprehensive sustainment baseline.
6	13-Nov-25	Licensing	Are you planning to contract directly with the primary vendors (Oracle, Solventum, Amwell, Henry Schein, Artera, TrackCore, etc.)? If not, will those vendors be required to partner with anyone awarded items requiring that vendor's support/assistance?	19-Nov-25	As briefed at industry day, the Governmetn requested industry to assist how best to build that construct grouping capabilities, such as vendor management, together for performance, cost, efficiency, and optimize competition. (see industry day brief slide #21)
7	13-Nov-25	Scope	Consider including transaction fee assessment / monitoring / forecasting as part of scope. FHIR, ambient listening, and other "per transaction" usage will grow and it's important to understand the impact of change	19-Nov-25	Noted
8	13-Nov-25	Scope	How will the OCI migration, slated to run for a few more years, impact the scope of the procurement?	19-Nov-25	This is a topic the Government will be seeking additional information from industry shortly. As discussed at industry day, initial market research showed the current Service Provider Integrator (SPI) should stay maintain the system until the migration is completed.
