

Single Source Justification (Simplified Acquisition)

Section A: General Contract Information

Is this a Bridge Action as defined in the [AF Bridge Action Reduction Plan](#)?☐ Yes☒ No

Contracting Activity: AFTC/PZI (Arnold) - OL Holloman

Project/Program Name: SpatialAnalyzer 2026

Purchase Request / Local ID Number: [REDACTED]

Estimated Contract Cost (including Options): [REDACTED]

Section B: Description of the Supplies/Services Required

This acquisition is for the procurement of annual software maintenance for four (4) existing, government-owned licenses of SpatialAnalyzer (SA) software, which are essential to the mission of the 846th Test Squadron (846 TS) at the Holloman High Speed Test Track (HHSTT).

The specific items to be procured are the manufacturer's standard Software Maintenance Agreements (SMAs) for three (3) SpatialAnalyzer Professional licenses (Keys #3482, #5366, #5367) and one (1) SpatialAnalyzer Ultimate license (Key #2327). This maintenance provides critical software updates, bug fixes, and direct technical support from the manufacturer, Hexagon Manufacturing Intelligence, Inc. doing business as New River Kinematics. The procurement will consist of a base year (1 April 2026 – 31 March 2027) and four (4) one-year option periods to ensure continuous, uninterrupted service through 31 March 2031.

The SA software is the core of the 846 TS's metrology data collection process, used to align high-speed test rails and rocket sleds to the precise tolerances required for mission success. It is the only software platform that seamlessly interfaces with all of the diverse metrology instruments utilized at the HHSTT, integrating data from various sources into a single, unified graphical environment. This capability is mandatory for ensuring the safety, accuracy, and reliability of rocket sled testing. Failure to maintain these licenses would result in the inability to verify test alignments, directly compromising mission objectives and posing a significant risk to government assets.

Section C: Justification for Soliciting from a Single Source or Brand Name

Pursuant to FAR 13.106-1(b)(1)(i), this justification is based on the fact that only one source is reasonably available to provide the required software maintenance. New River Kinematics is the sole developer and manufacturer of the proprietary SpatialAnalyzer (SA) software. As the exclusive owner of the data rights, it is the only entity capable of providing the necessary software updates, bug fixes, and technical support required for the maintenance of its software.

Market research was conducted to determine if replacing this mission-critical system with an alternative was a viable option. The research identified five alternatives: [REDACTED]. It was concluded that replacing the current system is not a feasible solution for several reasons. First, some alternatives, such as [REDACTED], are not compatible with the 846th Test Squadron's current test hardware. Second, switching to a compatible alternative is not cost-effective. The initial investment to switch is estimated at approximately \$[REDACTED] (including licenses, supporting software, maintenance, and training), and the annual maintenance costs for these alternatives are twice that of Hexagon's. Third, since these alternatives are also sole-sourced products from companies like [REDACTED], switching vendors would not increase competition. Such a change would also introduce unacceptable operational risks, including additional fees, hardware costs, and delays to the test mission.

Furthermore, a technical review concluded that these alternatives, while capable inspection tools, lack the unique procedural capabilities of SpatialAnalyzer that are critical for tasks. SpatialAnalyzer achieves a superior level of accuracy through its Unified Spatial Metrology Network (USMN), a unique feature that eliminates the compounding errors common in other systems. It also functions as an in-process assembly tool by providing live, dynamic feedback to actively guide physical components into their precise nominal positions. This focus on the process of building with high precision, rather than solely on final inspection, makes it uniquely suited to the agency's requirements.

Single Source Justification (Simplified Acquisition)

Therefore, procuring this maintenance from the original manufacturer, New River Kinematics, is the only method to ensure mission continuity and is in the best interest of the Government.

Section D: Efforts to Obtain Competition

Market research was conducted to identify potential alternatives, however, none were found to be viable. While competing metrology platforms such as [REDACTED] were identified, they were determined to be unsuitable. [REDACTED] eliminated due to documented incompatibility with essential 846 TS test hardware. Furthermore, switching to any alternative platform would introduce substantial and non-recoupable costs for new software licenses and mandatory personnel retraining. It was therefore concluded that no viable competition exists that can meet the Government's need without incurring unacceptable cost and mission disruption.

Section E: Steps to Preclude Future Single Source or Brand Name Awards

The Government will continue to conduct market surveillance to identify new technologies or emerging vendors in the metrology software industry. Furthermore, for all future system upgrades or new project requirements, an evaluation will be performed during the design phase to determine if suitable alternatives exist that would enable full and open competition.

Section F: Contracting Officer's Determination

I have determined, in accordance with [FAR 13.106-1\(b\)\(1\)](#), that the circumstances of this contract action deem only a single source is reasonably available.
