

Question #	Question:	Answer:
1	General Reim Yesterday said we need to decentralize decision-making. To that end can you authorize munitions GOGO Commanders to enter into DoW-related P3s with Industry io to a limit such as \$1 million dollars? The current process is slow and discourages P3s.	Need to better understand the question. As answered during the P3 briefing, only partnerships above \$5,000,000.00 or Basic Order Agreements require JMC Commander approval. AMC Policy requires any BOA or P3 above \$5,000,000.00 in value requires LCMC Commander approval. Agree the process needs to be streamlined and we are currently working with ACC-RI on areas to lean the process.
2	Where can one find the ROI for submitting proposals	We are unsure of how to answer this question, please email usarmy.ria.acc.mbx.s3coe@army.mil with further details
3	In a EUL can you lease buildings and utilities if available as well? If yes what is the difference of a EUL and ARMS?	A lease under 10 U.S.C. 2667 can include buildings. Any utilities to be provided by the Installation to the lessee would be addressed in an agreement separate from the lease. Offerors will be required to include in their proposal how they intend to address all utility requirements. Army cannot guarantee use of Installation utilities.

4	For EULs: There is a decrepit building at Picatinny arsenal with broken windows, doors, and a failed roof. Since it is part of an EUL the Garrison cannot perform any maintenance to fix this eyesore. How do we keep this from happening at other bases?	The Army's lease includes requirements for lessees to maintain the leased premises, including any improvements. If a lessee fails to properly maintain the leased premises, Army can issue a cure notice for failure to comply with the terms of the lease.
5	Will lessee be required to meet UFC requirements and Army Regs for greenfield construction?	This will depend on the terms of the lease.
6	How much oversight from local Army is required for an EUL?	Once awarded, the lessee operates the property and facility as their own. While annual inspections should be conducted by the Installation or the cognizant USACE District to ensure the lessee is abiding by the terms of the lease, regular oversight should not be required. Operations under the EUL will be established in a way to not impede any current missions on the installation. Only if terms of the lease are being violated should Army oversight be needed.

7	Is the EUL only for land or can underutilized buildings be included as well?	See number 3 - Existing buildings can be leased under 10 U.S.C. 2667.
8	Does the revenue generated from an EUL go back to the OIB site? If not, why? Is there an appetite for policy change for that revenue to come in whole to the installation?	Consideration to be provided by the lessee to the Army for an EUL can be in the form of cash or in-kind. At least 50% of cash rent must be provided to the Installation where the EUL is located. If Army elects to receive in-kind consideration, such in-kind consideration may be accepted at any property or facilities under the control of the Army.
9	Do the leases include NEQ considerations?	We are unsure of how to answer this question, please email usarmy.ria.acc.mbx.s3coe@army.mil with further details

10	Can you please explain the general process of establishing an EUL.	A Request for Proposals (RFP) will be posted on sam.gov following a notification to Congress of Army's intent to outlease the property. Proposals that are responsive to the RFP will be evaluated by a source selection evaluation board in accordance with the factors and criteria identified in the RFP. Once a selection notice has been issued to the successful offeror, the non-successful offerors will be notified that they were not selected. The selected offeror and Army will execute a Business Terms Agreement (BTA) that will serve as the agreement between both parties until an EUL is executed. The BTA will include a milestone timetable of the major steps that must be completed prior to execution of the EUL. Upon completion of all milestones, an EUL will be executed.
11	With the EUL, liability for environmental impacts during said lease, once the EUL is expired, who retains responsibility post contract.	The lease will require the lessee to return the property to the condition it was in prior to execution of the EUL. An Environmental Condition of Property (ECP) report and a Property Condition Report (PCR) will be completed prior to lease execution that will establish the condition of the leased premises. A second ECP and PCR will be completed upon expiration or the earlier termination of the lease.

12	Are there plans to move BRAC'd land back to the government?	"BRAC'd" land must go through a legally mandated disposal process that is governed by federal law, primarily the Defense Base Closure and Realignment Act of 1990. Returning the land to the Army would require a new act of Congress to reverse the BRAC law
13	How will ownership of infrastructure built be handled once the EUL concludes?	Removal and restoration of property is determined specific to each lease through lease negotiations.
14	Can a company lease and have non DoD operations on the land?	Yes, operations on the land leased does not require an associated contract or affiliation with DoW. The relationship between the Army and the lessee for a lease pursuant to 10 U.S.C. 2667 is that of landlord and tenant.
15	For the EUL will commercial code construction be allowed instead of UFCs?	See number five.
16	Will slides from today be posted to Sam.gov or emailed to attendees?	Slides have been posted.
17	General Reim said yesterday that we need to decentralize decision-making. Why not allow GOGO Commanders	See number one

	the authority to approve DoW-related P3s up to a cap such as \$1 million dollars?	
18	Quad Cities Cartridge Case Facility was not listed. Is that being used as a GOCO and if so what opportunities exist?	Opportunities at QCCCF are to be determined. The Government will provide further information when appropriate.
19	After establishing a P3 with the USG, can the industry partner elect to terminate the partnership at any time?	Yes.
20	For Mr. Dunkin, is there a difference between PPP and work with private party agreements?	Please reach out to william.w.dunkin.civ@army.mil to provide further details on this question.

21	For a P3, how can the industry partner be assured that government employees will be available to work when the industry partner needs them and not be working some other priority?	Historically there have been very few, if any, occasions where USG work has impacted a P3. Some partnerships have a combination of contract and government employees performing the work. If the partnership is specifically government workers only, communication and scheduling can mitigate risks. Today the government has plenty of capacity to support P3s.
22	For Energetics manufacturing history has shown a very slow Explosives Safety Site Plan approval. Is there a plan to expedite this? Expansion at Radford is an example	The team is working with AMC to remove/reduce obstacles to partnering.
24	For a P3 contract can the USG break the lease if the land use is needed for a priority use of the USG	A P3 is not a lease. For EULs, 10 USC 2667 allows the Army to waive the right to terminate a lease. The Army typically chooses to waive this right expect in the case of an uncured default
25	Are the companies responsible to return the space back to brown field when the EUL or P3 is complete?	For an EUL, the lessee is responsible for returning the property to its original condition upon lease expiration or its earlier termination.
26	Will we receive a copy of the slides being	See number 16

	presented today?	
27	Will the slides presented today be made available online. Can you confirm this. Thank you.	See number 16
28	Does the acreage stayed as available for each facility represent open areas that are not impacted by Quantity / Distance ARC from other operations on the site	Not necessarily. Depending upon the land requirements, an assessment would need to be done based upon the type of work being done and whether explosive arcs are impacted.
29	Regarding the period of RFP / public comment ... How does a private sector participant who is submitting for the RFI a great idea avoid a competitor stealing the idea and out maneuvering it?	The Government will keep all submissions proprietary. No RFI responses are shared amongst industry. For EULs, any project that Army elects to pursue based upon RFI responses will be competitively solicited through a Request for Proposals posted on sam.gov. There is no guarantee that the entity submitting the idea for the project under the RFI will be selected for an EUL through the competitive solicitation process.

30	If a tenant invests in the buildings and infrastructure needed for operations on the space can the contract be longer than 5 years?	A lease executed pursuant to 10 U.S.C. 2667 can be for terms greater than five (5) years. It will be at the discretion of the Army what lease term will be considered. The Request for Proposals will cite the minimum lease term that Army is offering and may address a possible renewal option.
31	What is the average overhead hourly cost for the GOGOs?	Each location and activity varies. The cost of services/labor will be clear before any obligation via P3 or EUL.
32	A tenant needs the security beyond 5 years (not just a renewal) if they are going to invest millions in the facility.	There is little incentive for the USG to not renew partnership agreements. The default action is for active P3s to get extended with no limit for overall timeframe. For EULs, refer to question 31 above.
33	For an EUL where the gov first hires a developer to renovate the facility before leasing to tenants, are both phases competitive and does the developer solicit tenants or does the gov?	In an EUL, Army will select a single offeror for award. Once all required due diligence, documentation and approvals have been satisfied, Army will execute an EUL with that selected offeror. Any subletting of the facilities would be the responsibility of the lessee and subject to the review and approval of Army as identified in the executed EUL.
34	For GOGOs that have open burn capability like Anniston, can material be brought from	Potentially. If the product is government owned, there is no issue. If product is commercially owned, there is a waiver process that can be utilized.

	offsite or does it need to be from manufacturing onsite	
35	What is the relationship or role of the commander and how will he interface with the contractor?	The Commander is responsible for the overall safety and security of the installation. For EUL, the lease will outline the roles and responsibilities of the lessee and the government/installation.
36	Are installations allowed to provide P3 pricing during an active competition?	Yes. Assumption to the question is a supplier wishes to utilize the OIB as part of their supply chain when bidding on FAR contracts. The contractor would create a Statement of Work for work to be completed by the installation, then the installation would provide cost estimates.
37	Why was Radford not included in the P3 list of facilities.	Radford is a Government Owned - Contractor Operated Facility. Excess capacity is to be handled through the ARMS process, not P3s.
38	Can stabilized rates be created for GOGOs?	The rates are set in accordance with the AWCF model.
39	For P3 can contractor bring their workforce to work with UGS employees?	Yes.
40	Will these slides be available after the conference?	See number 16.

41	Under the ARMS program, it was stated that agreements can last up to 25 years and the Operating Contractor manages the agreement. Can an ARMS tenant remain on a GOCO site if a new operating contractor assumes responsibility?	Yes. All tenant use agreements has a clause that novates the agreement to the new operating contractor. All original terms and conditions remain.
42	What is the future budgets for ARMS. As of recent the budget have withered to almost nothing. Roads and grounds for example cannot be maintained	Future budgets are not within the control of the ARMS team.
43	How will the government deconflict plant operations from MATOC work?	This is still under review. The Government has acknowledged this concern. Details will be in the final RFP.
44	Are the budgets for ARMS going up?	See number 42
45	How do you plan to deal with the various unions and their collective bargaining agreements where	All labor laws applicable at the location will be followed.

	employees rotate between production lines based on seniority? Are you going to ask for or require a non union workforce?	
46	What US-owned production and maintenance equipment has been most in demand under the Industrial Park Operating Model? How often are multiple contractors splitting use of this production/maintenance equipment?	This is to be determined. We are not currently utilizing the industrial Park Model. Specific RFIs related to it can be submitted the Iowa Army Ammunition Plant team. See https://sam.gov/workspace/contract/opp/c7f2eb78400445ca97a45caff2fd05cc/view for the sources sought notice.
47	Is there sufficient water supply at Bluegrass for an energetics facility??	This was answered during the Q&A session, yes.
48	Under the office park model, how does the US government plan to handle indemnification if there is an accident?	USG is still evaluating approaches and is open to feedback from interested parties. Please see https://sam.gov/workspace/contract/opp/c7f2eb78400445ca97a45caff2fd05cc/view for further comment and feedback.

49	Regarding the IAAAP slide -- if the operating contract may or may not include production of ammunition, then do you plan to select an independent operator for the ammo production? and what is the reason behind such consideration?	If the USG selects a non-traditional model for the GOCO operating model, the operating contractor, or "property manager" might not be a traditional ammunition producer and would be a service provider to the production line operating contractors. Each production line would potentially be on a separate contract that would have ammunition deliveries associated with that contract. The general intent is that often ammunition producers are not "experts" in facility management, while some companies are excellent facility managers but are not ammunition producers. We are looking at potential models that can leverage specific expertise to provide best value and increased efficiencies. A company that is an ammunition producer might not be the best fit to provide security, roadway and bridge maintenance, manager agriculture land, or design, build and commission a new capability, etc. The USG is open to comments on that model at https://sam.gov/workspace/contract/opp/c7f2eb78400445ca97a45caff2fd05cc/view .
50	With regards to the MACS modernization program-- what opportunities are available or will be available to the industry ?	If this is in regards to the Government Owned - Contractor Operated Multiple Award Indefinite-Delivery Indefinite-Quantity solicitation, if known opportunities are coming the information will be posted in the solicitation. Please see https://sam.gov/workspace/contract/opp/f204f80f39c84215b920e92cb738a31d/view for more information.
51	What's the process to have new designs tested and qualified? And does the USG help?	The Government is currently working on an answer for this question and it will be posted when available
52	Will base bleeds phase out after	The plan is to have base bleeds on 52 caliber compatible projectiles.

	transition to higher caliber barrels?	
53	When will the USG release the M1208 TDP so that we can look at the producibility of the 1208 and to look at the supply chain?	The USG does not own the TDP. The TDP is owned by Tomer. Potential contractors interested in M1208 should reach out to Tomer regarding opportunities and the TDP.
54	Will PM CAS slide deck be distributed to all attendees?	See number 16.
55	What are the primary materiel and personnel blockers from meeting current artillery production goals?	The artillery production enterprise has made significant progress surging capacity from roughly 14,000 per month prior to the conflict in Ukraine to nearing 56,000 at present day with numerous capacity efforts still to be realized. The present limiting factor for artillery production is artillery metal parts which the USG is conducting negotiations for the future of the Mesquite facility in addition to conducting market research.
56	In light of recent shortfalls within the Organic Industrial Base in delivering M795 metal components, are there planned OTAs or contracting pathways to onboard	The USG is presently conducting market research for 155mm artillery metal parts and base bleed expansion which close 15 April and 16 April, respectively. These market surveys will inform the strategy for follow on contract actions so companies are heavily encouraged to respond with a capability statement.

	alternative suppliers, including those offering metals, carbon composites, ceramics, or hybrid material solutions?	
57	Communicating a lot of exciting new systems but the budget you are showing is not indicative of the growth you expect. Why the disconnect? Based budget in particular.	The budgets are as of today and may change subject to funding.
58	What new pgms do you anticipate related to the move to a new 52 cal cannon?	The new 52-caliber cannon will require advanced ammunition and modernized propulsion to fully leverage its extended range and precision capabilities. Programs focused on developing new types of projectiles, such as precision-guided munitions, extended-range rounds, and specialized warheads, as well as advancements in propulsion will be critical to increasing operational effectiveness of the fleet.
59	Can't hear speaker	N/A

60	There is lots of information about chemicals/materials of concern. Is there a list of equipment/processing equipment of concern?	There is not a list of equipment of concern but the government would be interested in a dialogue with industry if they have such a list. Clearly the means of production are as important as the product itself. If particular risks are identified, we need to tackle those to reduce the risk to an acceptable level.
61	How did you gather the data on current supply chain risk? Is that data available to leadership in real time?	The government leveraged a number of data sources available to it, to include TDPs, ammo data cards, IBAT data, SME interviews, and a number of other sources to establish a view of the supply chain. The Government has a database capturing the results and an associated dashboard is in development to make the data available to those with a need to know to include leadership. The contents of this database cannot be shared outside of the government.
62	Are you looking to add people to the industry working group?	Yes.
63	You mentioned that the Army's focus was on alternate chemistry paths to avoid reliance on foreign sources. This will come at a significant cost. Is the Army will to	The Army has allocated funds to develop alternative chemistries for a number of applications where it has been determined to be necessary.

	allocate additional funding to achieve this objective?	
64	We are wondering about the need of RDX and NGU? Total needs and plans?	Needs across the DoW are under evaluation presently.
65	Doesn't the USG receive funding to eliminate single points of failure? Would the USG fund industry too?	The CPE A&E leverages DPA Title III to mitigate foreign sources of supply. Industry participates through the Defense Industrial Base Consortium. Solutions to domestic single point failures are funded on a case by case basis. The desire is for new industry partners to bring new upstream sources where it makes sense and provides value.
66	Will all these CPE A&E slides be sent to attendees?	See number 16
67	Are there open house office hours for 1:1	No, but please contact the S3COE at usarmy.ria.acc.mbx.s3coe@army.mil to request a one on one.
