

NOTICE OF INTENT TO SOLE SOURCE

Solicitation Number: 75N98026Q00253

Notice Type: Special Notice

Title: Preventative Maintenance and Support for Sony ID7000 Cell Analyzer

NAICS Code: 811210 – Electronic and Precision Equipment Repair and Maintenance

THIS IS NOT A SOLICITATION FOR COMPETITIVE QUOTES.

This is a Notice of Intent (NOI) to award a sole source purchase order to Sony Biotechnology Inc. under the authority of FAR 13.106-1(b)(1), Soliciting from a Single Source.

Requirement Description:

The National Institute on Aging (NIA), Intramural Research Program (IRP), requires preventative maintenance and service support for one (1) Sony ID7000 Cell Analyzer (NIH decal number 02178171). This instrument is located at the Biomedical Research Center, 251 Bayview Boulevard, Baltimore, Maryland.

The service contract shall include:

- All parts, labor, and travel for unlimited service calls
- One annual preventative maintenance visit performed to original equipment manufacturer (OEM) specifications
- Technical support and priority on-site response
- Repair services performed by OEM-authorized, factory-trained technicians

The instrument is critical to ongoing biomedical research and must remain calibrated and maintained in accordance with OEM standards to ensure data integrity and continuity of longitudinal studies.

The Government intends to award a base period with potential option periods; however, the exact structure, number, and duration of any option periods will be defined at time of award.

Period of Performance:

May 11, 2026 – May 10, 2027.

Justification for Sole Source:

The Sony ID7000 Cell Analyzer is a highly specialized flow cytometry instrument requiring maintenance and repair services performed by OEM-authorized technicians using proprietary parts and manufacturer-specific calibration procedures. Only Sony Biotechnology Inc. has access to the proprietary technical data, software, engineering updates, and certified personnel necessary to perform these services in accordance with manufacturer specifications.

Third-party service providers are not authorized to service this equipment and do not have access to the required proprietary components or technical resources. Use of non-OEM service would risk instrument malfunction, invalidation of calibration standards, and disruption to critical research activities.

Accordingly, Sony Biotechnology Inc. is the only responsible source capable of meeting the Government's requirement.

Response Instructions:

Interested parties may identify their interest and capability to respond to this requirement. Vendors must demonstrate their ability to provide service by OEM-authorized, factory-trained technicians and access to proprietary parts and technical data required to maintain the Sony ID7000 system.

Responses must be submitted via email to nicholas.capobianco@nih.gov no later than May 1, 2026, at 9:00 a.m. EDT.

Responses received will be evaluated solely to determine whether a competitive procurement is feasible. This notice is for informational purposes only and does not constitute a request for quotations.

Contracting Office Address:

National Institutes of Health (NIH) OD/OALM

6701 Rockledge Drive

Bethesda, MD 20892-7784
