

PERFORMANCE WORK STATEMENT

1. Electronics Test Lab

12 April 2024

Requiring Activity: DLA Product Test Center Division, Electronics Lab, located at Columbus, Ohio. Contracting Activity: DLA Contracting Services located in Columbus, Ohio.

2. Introduction

This is a description of the DLA Product Test Center (PTC) Division, Electronic Lab, requirements for the procurement of an Optical Coordinate Measuring Machine (OCMM). It is the intent here to clearly define all required performance characteristics. In generating this statement, our objective is to end up with an OCMM which expands our overall testing capability of inspecting intricate parts, in both accuracy and efficiency. Because we want to maximize the ease of use some of the required features listed below will be specific. Our general objective is to minimize any impact to the DLA Product Test Center Division, Electronic Lab operations and our customers because of this procurement, especially with regards to test cycle time. This system will decrease time required to inspect delicate parts and reduce any human errors possible with current measurements.

3. Background

This machine would increase Electronic Product Test Center's (EPTC's) measuring efficiency and accuracy, help improve measuring turnaround time, and provide a new way of measuring the EPTC that could only be done before by sending a project to the Mechanical Product Test Center (MPTC). Most importantly procurement of this machine will increase our current optical measuring capacity as currently MPTC has one OCMM. Not procuring this piece of equipment would continue to increase cycle time on all projects that require an OCMM to get the dimensional data as the EPTC would have to wait for the one in the MPTC to become available for use.

4. Scope

The installation and calibration of one (1) Starrett Optical Inspection CMM with workstation. One day of on-site training for up to five (5) laboratory associates.

5. Applicable Directives

None

6. Performance Requirements

The Contractor shall install, calibrate, and provide on-site training for the Optical Coordinate Measuring Machine and workstation.

7. Deliverables

The Starrett AVR300 system.

8. Place of Performance

DSCC Columbus
Building 11 Section 7
3990 East Broad Street
Whitehall, OH 43213

Shipped receivable to Bldg 17

Marked for Bldg 11 section 7

Attn: Kedric Jones (+1 614-693-0776)

Work to be performed will take place at:
Building 11, Section 7

9. Travel (if applicable)

No line-item travel was itemized in quote.

10. Invoicing

Payment of invoices will be accomplished by payment through the Defense Finance and Accounting Service. Invoices will be submitted to the Wide Area Workflow system in accordance with DFARS 252.232-7003-Electronic Submission of Payment Requests and Receiving Reports and DFARS 252.232- 7006 Wide Area Workflow Payment Instructions within 10 workdays after the conclusion of each training session.

11. WAWF Acceptance DODAAC#

Electronics Product
Test Center is
SL0700.

12. Point of Contacts

The Government Contract Officer:
TBD
