

**JUSTIFICATION FOR OTHER THAN FULL AND OPEN
COMPETITION**

NATIONAL NUCLEAR SECURITY ADMINISTRATION

COUNTER-UNMANNED AIRCRAFT SYSTEM

NOMAD GLOBAL COMMUNICATION SOLUTIONS, INC.

CONTRACT NUMBER 89233126DNA000078

MARCH 16, 2026

I. AGENCY IDENTIFY AND CONTRACTING OFFICE

The Office of Secure Transportation (OST) of the U.S. Department of Energy (DOE), National Nuclear Security Administration (NNSA) intends to award an Indefinite Delivery/Indefinite Quantity (IDIQ) contract by means of other than full and open competition. The contracting activity is the DOE/NNSA Office of Partnership and Acquisition Services, Program Support Acquisition Branch (NA-PAS-315).

II. NATURE AND/OR DESCRIPTION OF THE ACTION BEING APPROVED

This document sets forth the justification and approval of the use of one of the exceptions to full and open competition allowed under Competition in Contracting Act (CICA) of 1984, Pub. L. No. 98-369. This action will be five a (5) year IDIQ acquisition for an [REDACTED] Counter-Unmanned Aircraft System (C-UAS) [REDACTED] the requirement will include the initial development of [REDACTED] that will be subject to extensive field integration, testing, and validation [REDACTED] Upon successful field testing and validations, DOE/NNSA intends to place an order for up to [REDACTED] that will contain all associated integrated technologies manufactured and/or supplied by NOMAD GCS, Inc. The North American Industry Classification System (NAICS) code for this acquisition is 336211 with a size standard of 400 employees.

NOMAD GLOBAL COMMUNICATION SOLUTIONS, INC	
Unique Entity ID	ESY3CTEH56A7
Commercial & Government Entity (CAGE) Code	3DD46
Product Service Code	2350 (Combat, Assault, & Tactical Vehicles)
Address	5414 US-2, Columbia Falls, MT 59912
North American Industry Classification System (NAICS) Code	336211 (Motor Vehicle Body Manufacturing)
Size Standard	400 Employees

III. DESCRIPTION OF SUPPLIES AND/OR SERVICES

[REDACTED] has a need for a [REDACTED] that is able to detect, track, identify, mitigate, and defeat [REDACTED] in real-time potentially [REDACTED] UASs that have the significant potential to [REDACTED] [REDACTED] that not only acts as a force multiplier, but augments the existing [REDACTED] by providing an additional layer of security protection [REDACTED] The requirement will

also support the NNSA's FY25 Stockpile Stewardship and Management Plan, which tasked the [REDACTED] to take on additional mission capacity for its DOE and Department of War (DOW) customers.

Accordingly, this acquisition is for NOMAD GCS to deliver [REDACTED] on a Firm-Fixed Price (FFP) basis under the IDIQ. Upon delivery, the [REDACTED] will undergo extensive [REDACTED] field integration, [REDACTED] testing, and validation to ensure that it meets [REDACTED]. In addition, subject to the availability of appropriations, if the [REDACTED] field testing and evaluation proves the viability, functionality, and reliability of the [REDACTED], the Government will place an order for NOMAD GCS to produce a minimum of one (1) up to a maximum of [REDACTED].

[REDACTED]

IV. AUTHORITY

Under CICA Section 303(c)(1) P.L. 98-369, the agency may use other than full and open competition when the property or services needed are available from only one responsible source and no other type of property or services will satisfy the needs of the agency. Federal Acquisition Regulation (FAR) Overhaul (RFO) 6.103-1(b) and 6.103-1 (d) provide:

6.103-1(b) One Responsible Source. Agencies may contract without providing for full and open competition when the supplies or services required by the agency are available from only one responsible source and no other type of supplies or services will satisfy agency requirements; and

6.103-1(d) Application for brand-name descriptions. Except as authorized at 6.103-5, use of brand-name descriptions, or specification of attributes peculiar to one manufacturer, prevents full and open competition and should only be used when justified and approved according to 6.104.

V. APPLICATION OF AUTHORITY

NOMAD GCS is the only manufacturer at this time with the capability to provide an integrated and [REDACTED] turnkey command and control C-UAS system that features a dual defeat redundancy. NOMAD GCS's C-UAS system, features a [REDACTED]

[REDACTED] In addition, because [REDACTED]
[REDACTED] NOMAD's dedicated 24/7/365 technical support [REDACTED]

[REDACTED] NOMAD GCS also has the ability to provide long-term maintenance of the C-UAS [REDACTED] system which reduces the cost of owning and maintaining this system over its life cycle.

The NOMAD GCS C-UAS system is unique for the following reasons

Factor 1

[REDACTED]
[REDACTED] Specifically, NOMAD GCS's mobile platform incorporates [REDACTED] technology that features a fully integrated command, control, power management, and support capabilities. NOMAD GCS is the only vendor capable of providing an integrated solution that meets all operational, safety, redundancy, and sustainment requirements through their proprietary NOMAD Total Command (NTC) and NeverDown™ Power Management systems. At this time, no other manufacturer is capable of [REDACTED]

[REDACTED] This key and unique requirement allows [REDACTED] the greatest flexibility and capability to detect, deter, delay, and defeat any potential UAS adversary [REDACTED].

Factor 2

The [REDACTED] has the capability to support seamless interoperability, provide reliable power delivery, secure networking, and operator-friendly workflows, while remaining adaptable to future upgrades or changes in policy and threat profiles. NOMAD GCS designing solutions with integration readiness and system flexibility will enable [REDACTED] readily respond to emerging threats, manage evolving technology investments, and maintain operational relevance in an increasingly complex security environment.

Factor 3

NOMAD GCS provides an industry-leading 12-year structural warranty significantly exceeding industry norms. NOMAD GCS also coordinates with component OEMs for warranty claims and provides 24/7/365 technical support which is essential to [REDACTED]

[REDACTED] With a nationwide network of mobile technicians and service facilities 24/7/365, this feature ensures maximum [REDACTED] and minimal downtime to [REDACTED]

[REDACTED] No other vendor provides this unique operational support.

VI. EFFORTS TO IDENTIFY ADDITIONAL SOURCES

Marketing research on [REDACTED] technology were conducted through a combination of primary research (interviews with commercial industry experts, DOW personnel, and national laboratory technical subject matter experts). Extensive secondary research (analyzing existing technology industry reports, research and test evaluation whitepapers, and product publications), to assess a rapidly growing market driven by defense and federal agency's security needs.

Other sources identified through secondary research however, the technical evaluation conducted by OST determined these sources failed to meet [REDACTED] minimum mission-essential requirements for safety and reliability.

[REDACTED] training and coordination with other Federal Agencies allows the unique opportunity to identify additional sources for review and consideration. However, at this time, the market research reaffirms that NOMAD GCS has no authorized distributors. Although additional sources exist, none have been determined to meet the safety, quality, and reliability requirements.

VII. DETERMINATION OF REASONABLENESS OF COST OR PRICE

The Contracting Officer (CO) will determine the cost/price reasonableness through a price analysis supported by a technical analysis, comparison to historical Government contracts, an Independent Government Cost Estimate (IGCE), and relevant market research.

VIII. MARKET RESEARCH

C-UAS Federal Program Manager (FPM) conducted an analytical evaluation of alternative [REDACTED] solutions and technologies offering operational effectiveness, suitability, and life-cycle cost to meet or satisfy established [REDACTED] capability requirements. The C-UAS FPM considered effective methodology, operating environment, constraints, technology, risk assessments, suppliers, and system designs when analyzing both alternatives and non-viable alternatives. However, current Commercial and Government resources failed to produce any adequate alternative solutions for the [REDACTED]. Current non-engineer-to-order Commercial and Government vehicle resources failed to produce any adequate alternative solutions for sustainment of C-UAS technology mandated for the [REDACTED]. [REDACTED] Technical requirements considered during the FPM market research:

- **Constraint Conflict:** Directed Energy Weapon Systems weight and power draw exceed Size, Weight, and Power (SWaP) limits for standardized [REDACTED]. Inadequate power source availability for sustained High Energy Laser Systems contained within a [REDACTED].
- **Integrated Power Management:** [REDACTED] systems require efficient, high-capacity power solutions to operate [REDACTED]. [REDACTED] must be able to support peak power loads. [REDACTED] lack the specialized power generation, and cooling infrastructure required to run high-energy C-UAS sensors and jammers [REDACTED].
- **Payload and Space Constraints:** System integration cannot compromise the [REDACTED].
- **Integration Feasibility:** Systems must ideally be installed without major modifications that would alter the [REDACTED].
- **Interference & Safety Risks:** Commercial [REDACTED] susceptibility to [REDACTED] [REDACTED] causing collateral damage to the [REDACTED] [REDACTED] which is unacceptable for [REDACTED].

Current commercial and government resources failed to produce any adequate alternative solutions for the [REDACTED].

Market research efforts have concluded with the determination that Nomad Global Communication Solutions is uniquely positioned to satisfy the NNSA's requirements. This conclusion is based on a thorough evaluation of the specialized needs and the current market landscape, which revealed no other companies capable of meeting these specific criteria. Consequently, additional market research was deemed unnecessary.

IX. OTHER FACTS

Pursuant to the Energy Defense Act (50 U.S.C. § 2661(e)(1)(C)) (the "Act"), Protection of certain nuclear facilities and assets from unmanned aircraft, the U.S. Secretary of Energy may take any actions that are necessary to mitigate a credible threat that an unmanned aircraft or unmanned aircraft system (collectively "UAS") poses to the safety or security of these national assets on the Nation's [REDACTED] and waterways.

X. INTERESTED SOURCES

A contractor performance system search was conducted using the selection criteria with NAICS code of 336211 and the results were that no other companies with the specific technical knowledge and capabilities required could be identified. There were no other sources to support the [REDACTED] requirements for clean-power availability, rapid deploy ability, defeat effectiveness, safety, quality, and reliability 24/7/365.

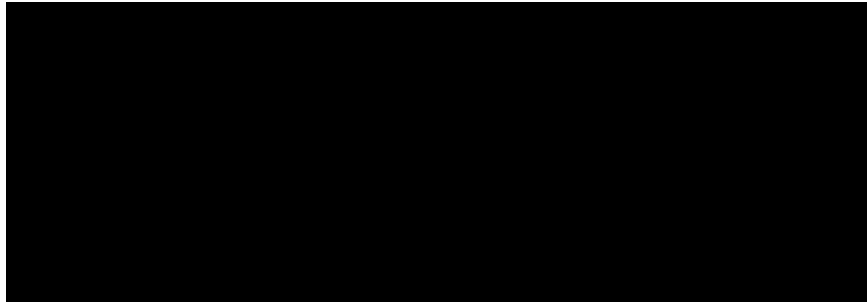

XI. STEPS TO FOSTER COMPETITION

For any subsequent acquisition the NNSA will utilize market research and Sources Sought Notices as core components of its strategy to determine if there are new entrants into the market that may help foster competition.

XII. CERTIFICATIONS

Acquisition Initiator/Technical Representative:

I certify that the facts and representations under my cognizance, which are included in this justification, and which form a basis for this justification, are complete and accurate.

Contracting Officer:

I certify that this justification is accurate and complete to the best of my knowledge and belief.

Senior Procurement Executive:

I have reviewed this justification for other than full and open competition and find it to be accurate and complete to the best of my knowledge and belief. Since this JOFOC exceeds
