

STATEMENT OF WORK

1. Objective/Requirements

Acquisition of annual service contract for suite of lab instrumentation.

2. Background

This procurement is for service plans covering several analytical liquid chromatographs, detectors, and mass spectrometers in the Code 691 Astrobiology Analytical Lab. This state-of-the-art equipment allows for the analysis of organic compounds in meteorites, returned samples, and other terrestrial and extraterrestrial materials. Because of the complexity of the instrumental systems, service and support from qualified, trained engineers is required to minimize downtime, perform repairs, and maintain the instruments in peak operating condition. If such service and support is not procured, the research capabilities of the lab will be affected, impacting the availability, speed, and precision of analytical measurements and research. Contractor must provide proof of certification by manufacturer, Thermo Electron, to ensure compliance with OEM requirements and allow for future service plan coverage without recertification.

3. Characteristics, Scope, and Specs

The contractor shall provide customized service plans for the following instruments:

- Q-Exactive Orbitrap mass spectrometer
- Vanquish Horizon UHPLC peripherals: pumps, autosampler, column compartments, and fluorescence detector
- Ultimate 3000 RSLCnano peripherals: pumps and autosampler

The service plans must be customized and include the following:

- An annual Performance Maintenance (PM) visit for the Q-Exactive Orbitrap mass spectrometer, the Vanquish Horizon UHPLC and the Ultimate 3000 RSLCnano.
- One corrective maintenance throughout the service plan coverage period shall also be included for the Q-Exactive Orbitrap mass spectrometer.
- Contractor shall replace all parts subject to wear as defined in the product-specific PM checklist for the aforementioned pieces of equipment receiving PM services.
- Guaranteed genuine manufacturer Quality Parts for PM visit
- All parts used in corrective maintenance shall be guaranteed, factory-tested, manufacturer Quality Parts
- Comprehensive PM parts kit, which shall be provided for each and every PM visit.
- Priority response time for all visits.

4. Place of Performance

Service provided through the service plans shall be carried out at Goddard Space Flight Center in the Astrobiology Analytical Lab (Building 34, rooms C174, C176, and C178).

5. Period of Performance

Service plans shall be provided as described in the Characteristics, Scope, and Specs section above, with dates of coverage from April 13, 2026 to April 12, 2027 for all instruments.
