

DEPARTMENT OF VETERANS AFFAIRS

Justification for Single Source Awards For Over Micro-Purchase Threshold but Not Exceeding the Simplified Acquisition Threshold

Acquisition Plan Action ID: 36C241-26-AP-1948

1. **Contracting Activity:** Department of Veterans Affairs, VISN 01, Contracting Office 01, in support of VA Providence Medical Center, 830 Chalkstone Avenue, Providence, RI 02908.

2237: 650-26-2-7821-0075

2. **Brief Description of Supplies/ Services required and the intended use/Estimated Amount:**

Item No.	Description	Quantity
HD03	HD03 Monitor	2
H4FX	H4FX Sensor for the HD03	2
PMM	Patient MEAS MOD w/o PAT ID IN	2

3. **Unique characteristics that limit availability to only one source, with the reason no other supplies or services can be used:**

The HD03 Hemodialysis Flow System, manufactured by SB Transonic Systems, Inc., is a specialized portable device critical for the monitoring and optimization of hemodialysis applications. It is a flow and volume measurement system that helps healthcare professionals monitor and evaluate the performance of dialysis treatments. These real time measurement results identify dose delivery problems in the AV access and central venous catheters allowing healthcare providers on the spot to identify any issues providing optimal treatment for veterans. Additionally, the Transonic HD03 helps in assessing the health of vascular access (such as fistulas and grafts) by detecting stenosis or other abnormalities. It aids in ensuring the adequacy of dialysis treatment by providing critical information about flow rates. The device is typically non-invasive, which means it can perform measurements oftentimes without the need for additional surgical procedures.

The HD03 Hemodialysis Flow System is currently the only standalone portable monitor in the marketplace that does not require additional IV lines to go into the

veteran and can monitor the lines coming directly from the dialysis machine. It supports the overall quality control of hemodialysis by providing data that can be used to optimize treatment parameters for veterans.

4. Description of market research conducted and results or statement why it was not conducted:

A search was conducted on Sam.gov utilizing NAICS 334510 and over 500 SDVOSBs were identified. Keyword "Transonic" was added and 0 results were displayed. A search on SBA was then conducted with NAICS 334510 and over 400 SDVOSBs were identified. Keyword "transonic" was then added and 0 results were displayed for both SDVOSB(s) and VOSB(s). Another SBA search was conducted with 334510 and keyword "hemodialysis" was conducted and 0 SDVOSB(s) or VOSB(s) were displayed. A search on GSA Advantage was searched with keyword "hemodialysis monitor" and "Transonic HD03 Hemodialysis Monitoring" and no results were displayed. A market research survey was sent to OEM SB Transonic Systems and it was learned they are the sole manufacturer and distributor for the portable hemodialysis flow system as there are no other competitors in the marketplace at this time. A sole source letter was provided and is on file.

5. Contracting Officer's Certification: *I certify that the foregoing justification is accurate and complete to the best of my knowledge and belief.*

Date

Sole Manufacturer Notice

September 30, 2024

To Whom It May Concern;

Transonic Systems, Inc. is the sole manufacturer of the HD03 Hemodialysis Monitor, a freestanding device that measures the hemodialysis patient's true Delivered Flow, Recirculation, Access Flow and Cardiac Function parameters in AV fistulas and AV grafts during hemodialysis treatment. The HD03 monitor also measures Delivered Flow and Recirculation in dialysis catheters. There is no other device on the market that quantitatively measures all of these parameters for hemodialysis patients at this time. These measurements provide information that assist the Nephrologist and Dialysis Care Teams in performing vascular access surveillance and dialysis adequacy checks to ensure the patient is getting the hemodialysis delivery that was prescribed and that their access is functioning properly. These measurements also provide a unique insight into the cardiac function of the hemodialysis patient and can help forestall cardiovascular complications.

Sincerely,

Elizabeth Emig-Rosekrans

Chief Financial & Administrative Officer
