Section C - Description/Specifications/Statement of Work

Statement of Work for:

Annual Haivision Premium Support FY 26

-

(S) Background

The Atlantic Test Range, Telemetry Branch is procuring Annual Haivision Support Renewal in support of Atlantic Test Range (ATR).

- Scope

The Real-Time Telemetry Processing System (RTPS) provides processing and display of data which is collected and transmitted as telemetry signals from the aircraft or other test article. RTPS receives the telemetry signals, decodes each individual measurement included in the signals received, computes additional "derived measurements" needed, and makes all measurements available for display in a Project Engineer Station (PES). The actual data displays are then selected by the Flight Test Engineers according to the requirements of the specific test being conducted. RTPS operations are conducted and data processed in a sequential collection of equipment called a stream.

(S) Objectives/Task

This is for the annual renewal of Hardware/Software and online support of Haivision Video Encoders devices. These devices are the intellectual property, sole manufacturer and source of all technical support by Haivision. These Haivision Video Encoders are designed to transport high-quality, low-latency, HD Video over any network at extremely low bit rates for live video applications that support all Flight Test Operations at the Atlantic Test Range.

- Delivery Item

Haivision Premium Support Program - Renewal Includes 24/7 Critical Phone Support, 2 Hour Response Time; Enhanced Hardware Coverage; General Availability and Maintenance Software Releases. For 12 Months. P/N: M-PREM-SUPP-REN, Qty: 1

(2) For items that are serialized within the original part, lot, or batch number, the linking together of the unique identifier data elements in order of the issuing agency code; enterprise identifier; original part, lot, or batch number; and serial number within the original part, lot, or batch number.

"Data matrix" means a two-dimensional matrix symbology, which is made up of square or, in some cases, round modules arranged within a perimeter finder pattern and uses the Error Checking and Correction 200 (ECC200) specification found within International Standards Organization (ISO)/International Electrotechnical Commission (IEC) 16022.

"Data qualifier" means a specified character (or string of characters) that immediately precedes a data field that defines the general category or intended use of the data that follows.

"DoD recognized unique identification equivalent" means a unique identification method that is in commercial use and has been recognized by DoD. All DoD recognized unique identification equivalents are listed at <https://www.acq.osd.mil/asda/dpc/ce/ds/unique-id.html>.
