

Department of Justice (DOJ) /
Drug Enforcement Administration (DEA)

(U) REQUEST FOR INFORMATION

REQUIREMENT NAME: eDiscovery review platform.

1.0 REQUEST FOR INFORMATION (RFI) PURPOSE AND DISCLAIMERS

The Drug Enforcement Agency Administration (DEA) is issuing the following Request For Information (RFI) to obtain market research information related to DEA's eDiscovery review platform.

This RFI does not constitute a Request for Proposal (RFP) and is not to be construed as a commitment by the Government. In accordance with the Federal Acquisition Regulation (FAR) Part 10 – Market Research and FAR 52.215-3, *Request for Information or Soliciting for Planning Purposes (Oct 1997)*, please be advised that this is an RFI only, and does not obligate the Government to reimburse any cost associated with preparation and/or submission of a capabilities statement. This RFI neither guarantees that the Government will issue an RFP, nor that it will award a contract for these services.

This RFI may be used to determine an acquisition strategy for this requirement, and **failure to respond to this RFI may preclude participation in any subsequent acquisition**. For example, if the market research conducted via this RFI indicates that two or more small business entities are capable of performing the requirements, the effort may be solicited as a small business set aside, or if market research indicates only one vendor is capable, a Fair Opportunity Exception (FOE) may be requested. However, in no instance will a respondent's capability statement be used as a proposal.

2.0 REQUEST FOR INFORMATION NUMBER: 15DDHQ-26-RFI-FAIT02

3.0 REQUIREMENT OVERVIEW

The digital age has brought about an unprecedented surge in the generation, collection, and storage of vast amounts of information. This presents both opportunities and challenges for the DEA. The proliferation of digital technologies, surveillance systems, social media platforms, and interconnected systems and databases empowers the DEA workforce with access to a wealth of information, opening new avenues for investigation, drug poisoning prevention, and strategic decision-making. However, the sheer volume and diversity of data also pose significant challenges in terms of extraction, standardization, analysis, interpretation, and visualization. Adapting to this informational landscape will reshape how DEA operates and underscores the critical role of data in combating organized cartel structures. This shift also emphasizes the networked nature of the threat, offering opportunities to map, identify, and target networks through data, particularly as traditional investigative tools face growing limitations in the evolving landscape.

AREAS OF INTEREST: The requirements are subject but not limited to;

1. Commercial off the Shelf Case Management Systems
2. Case Management Tools and Customization
3. Reporting and Auditing (i.e., compliance with DEA investigative reporting policies)
4. Case and Task Management: Case/Investigation management to include document workflow and approvals
5. Data Sorting and Analytics
6. Criminal organization network Mapping
7. Cloud Migration: Technologies that can enhance our current infrastructure including hybrid approaches.
8. Security: Robust security measures safeguarding sensitive data and mitigating cybersecurity risks.
9. System Configuration: Integration capabilities with existing systems and platforms to ensure seamless transition and interoperability
10. System Integration
11. Federal Cybersecurity Compliance (e.g., FEDRAMP)
12. Enterprise solution supporting worldwide operations.
13. User-friendly interfaces and intuitive functionalities to enhance employee productivity and customer experience.
14. Ongoing support, maintenance services and enterprise training to ensure optimal performance and uptime.
15. Integration of geospatial and temporal analysis, visualization and AI.
16. Data migration strategy for existing legacy case management system (Relativity).

4.0 REFINEMENT OF REQUIREMENTS

DEA's current Case Management environment: DEA currently uses Relativity for their eLitigation Investigative and Case Management needs. **Relativity is a DEA system that is managed, operated, and maintained by DEA's Information Systems Division (TC) in conjunction with the DEA's Digital Evidence Lab (SFL9) eDiscovery Unit. In its current form and as installed, Relativity provides DEA personnel with the ability to ingest, review, analyze, produce and audit (compliant with DEA policy) DEA data and data produced to the DEA.**

DEA's Investigation Environment Future State:

Base Case Management System: DEA is assessing the capabilities of available law enforcement investigative case reporting, evidence tracking, and data management software to replace Relativity and augment current systems DEA utilizes to meet law enforcement, forensics, and drug related requirements. A case management system supporting DEA's law enforcement community requires a web-based intuitive user-friendly interface (Section 508 compliance), the ability for document management (manage workflows, audit data input to ensure compliance

(i.e., DEA policy) and audit trail (e.g., time-stamped records, user ID tracking, role- and permission-based access control, etc.), be minimally customizable solution for agency specific needs, provide deconfliction capabilities, be capable of handling internal requests for ingestion, review, analysis, production, and presentation in conformance with the Electronic Discovery Reference Model (“EDRM”). The case management system should have the following technical requirements: integrate with other federal systems (e.g., APIs), ensure high levels of security and compliance (e.g., FedRAMP High, FISMA, CJIS, etc.), cloud-based or on-premises or hybrid deployment models, and user roles and permissions (e.g., RBAC and ABAC).

DEA Investigative Ecosystem: Further, DEA is assessing the possibility of a full DEA ecosystem with a combination of the base case management system (see above) and leverage existing capabilities to include the early parts of the EDRM, specifically identification, legal holds, and data preservation, structured and non-structured data search and analytics (i.e., analytics to identify patterns, trends, and intelligence), support for multilingual capabilities, and incorporate AI/ML capabilities. These would form a comprehensive and technologically advanced system meeting the diverse needs outlined for a DEA law enforcement platform.

5.0 ORGANIZATIONAL CONFLICT OF INTEREST INFORMATION

Organizational Conflict of Interest (OCI) for this RFI pertains to demonstrated compliance. As such, replies from industry partners interested in this opportunity must clearly demonstrate their understanding and strict compliance as this RFI pertains to FAR Subpart 9.5:

Contractors must strictly avoid any potential organizational conflict of interest (OCI), including the appearance of a perceived OCI condition, and/or prior existence of an OCI condition, by disclosing any potential conflicts to the contracting officer and taking steps to mitigate or avoid them, often by following FAR Subpart 9.5 which outlines procedures for identifying and managing OCIs; this includes situations where a contractor might gain an unfair competitive advantage through prior knowledge of government requirements due to previous work with the Drug Enforcement Administration.

Key points about OCI guidance for contractors are as follows:

- **Disclosure is key:** Contractors must actively disclose any potential conflicts of interest to the contracting officer, even if they seem minor.
- **Avoid biased ground rules:** A contractor should not be involved in developing specifications or requirements for a future contract where they intend to compete.
- **Unequal access to information:** If a contractor has access to sensitive government information that could give them an unfair advantage in a competition, they must manage that information appropriately.
- **Mitigation strategies:** If an OCI is identified, the contractor will need to demonstrate they have taken steps to mitigate the conflict, such as recusing personnel involved, creating information barriers, or modifying their proposal.
- **Compliance with FAR Subpart 9.5:** The DEA expects contractors to comply with the FAR Subpart 9.5 and all relevant supplemental guidance regarding organizational

conflicts of interest, which outlines procedures for identifying, evaluating, and addressing potential conflicts.

In responses to the questions below, please provide past performance (contract number, government point of contact/telephone number/email) that accurately substantiates and supports your role as a contractor with performance similar in size and complexity to the DEA's requirement. Past performance must be reported in a manner that shows Official Conflict of Interest (OCI) has been preserved.

6.0 PERIOD OF PERFORMANCE

The anticipated period of performance is one base year with four, one-year options.

7.0 RFI SUBMISSION INSTRUCTIONS

All eligible vendors are requested to submit their responses electronically NLT 10:00 am (eastern) **1 May 2026**. Negative responses (not interested and/or not capable) are also requested. All communications shall be submitted via email. Telephone calls will not be entertained. Please submit via email to fac.proposal.submission@dea.gov, robert.j.radke@dea.gov and lindsey.j.clark@dea.gov with the subject line: RFI Response:15DDHQ-26-RFI-FAIT02 - eDiscovery review platform.

Responses should be prepared in accordance with the vendor's determined format. Vendors should respond to each item below. Vendors should limit their responses to no more than **60** pages total, 8.5 x 11 sheets, with font size no less than 12-point.

Responses are expected to be Unclassified. However, if certain pieces of information must exceed this level of classification, responses must be classified appropriately, must be portion marked, and sent electronically using the network appropriate to the information classification level. The overall classification should be marked at the top and bottom of each page. Vendors should include information on the Security Classification Guide (SCG) used to classify the document on the front page of the submittal. If submissions include proprietary information, such submissions must properly label that information and clearly indicate any limitations on its disclosure. The DEA will handle response information as sensitive and not share it outside of government evaluators, but it will not sign NDAs for RFI responses. Respondents are also requested to inform of any potential or actual OCI that may arise relevant to the subject matter in the RFI response. Please contact the RFI's POCs to request email addresses/delivery instruction for information that is higher than Unclassified.

Vendors who are capable and interested in this opportunity are requested to respond to all sections below.

NOTE: The Contractor **MUST** overtly demonstrate experience, technical knowledge, and Past Performance in **all** listed competence areas.

8.0 REQUEST FOR INFORMATION:

1. (U) COMPANY INFORMATION:	
COMPANY NAME:	CAGE CODE:
POC(NAME/PHONE/EMAIL):	UEI:

2. WHAT IS YOUR COMPANY’S SOCIOECONOMIC STATUS UNDER NAICS 541611	
SMALL (please specify type)	LARGE

3. WHAT IS YOUR COMPANY’S SOCIOECONOMIC STATUS UNDER NAICS 541330	
SMALL (please specify type)	LARGE

4. IS YOUR COMPANY CAPABLE/INTERESTED IN THIS OPPORTUNITY?
Yes / No (If no, any information regarding why you are not interested/capable is appreciated. If yes, please proceed to 5. CAPABILITIES)

5. CAPABILITIES

Item	Section	EDRM Model	Requirement	Description
1	General Security and Access	All EDRM Stages	Any changes to data must be traceable and reportable	Any changes to data must be traceable and reportable so that DEA can determine what changes were made throughout the EDRM process and report on ESI discovery and disclosure efforts as well as for chain of custody issues
2	General Security and Access	All EDRM Stages	Establishing Electronically Stored Information Disclosure and Discovery (“ESIDD”) databases	The delivered solution must allow for establishment of ESIDD databases for each case or cases as necessary

3	General Security and Access	All EDRM Stages	Handle large ESI data	The delivered solution must be capable of holding and maintaining up to 100 TB of data (DEA databases, images, native documents) with growth of approximately 30% per year. If vendor faces a maximum storage capability, vendor must state that maximum.
4	General Security and Access	All EDRM Stages	Preserving Evidentiary Metadata Throughout the EDRM	The delivered solution must preserve evidentiary metadata throughout all stages of ESI Disclosure & Discovery and all EDRM stages, including at a minimum the information commonly contained in a Load File (e.g. Concordance Load File) including, but not limited to: collection source, mime type, source ID, custodian, author, begdoc#, enddoc#, docid (eid), pgcount, groupid, parentid, attachids, attachlist, begattach, endattach, properties, record type, from, to, cc, bcc, subject, convindex, docdate, text filepath, date time sent, date time crtd, date time svd, date time mod, date time recvd, date time accd, file size, file name, application, file extension, filepath, native link, folder id, paragraph request number, md5 hash, message header, attach, count, file type, comments, message type, extended properties, and generate conversation / message threading index regardless of platform.
5	General Security and Access	All EDRM Stages	508 Compliance	The delivered solution shall require that the Contractor comply with requirements of section 508 of the Rehabilitation Act of 1973, as amended (29 U.S.C. 794(d) throughout its performance of the contract.
6	General Security and Access	All EDRM Stages	Access through DEA network, VDI, or VPN	The delivered solution shall have the capability to allow the user to use all aspects of the delivered solution through the DEA network, or

				remotely over a VPN connection or a VDI connection.
7	General Security and Access	All EDRM Stages	Access through single application	The delivered solution shall consist of a single application requiring one login to perform all functions. The delivered solution's administrative interface may be a separate application.
8	General Security and Access	All EDRM Stages	Access with DOJ PIV and/or CAC	The delivered solution shall have the capability to validate users with Smart Card technology, specifically DOJ PIV and/or CAC authentication
9	General Security and Access	All EDRM Stages	Access controlled/ role-based	The delivered solution shall have the capability to limit/grant access to certain functionality by Role Based Access Controls (RBAC).
10	General Security and Access	All EDRM Stages	Access controlled/ role-based	The delivered solution shall provide standard roles and allow the creation of additional roles. Access must be tailorable at the named resource level.
11	General Security and Access	All EDRM Stages	Accessible for use for all of DEA's Electronically Stored Information (ESI) Disclosure & Discovery	The delivered solution shall be capable of supporting all of DEA's ESI Disclosure & Discovery needs including, but not limited to all phases of the Electronic Discovery Reference Model (EDRM), Freedom of Information Act (FOIA) requests, internal and external investigations, congressional inquiries, and privacy act requirements.
12	General Security and Access	All EDRM Stages	Collaboration, Case Management and Tracking	The delivered solution shall include Case Management and Tracking and shall allow legal and access professionals the ability to collaborate in the processing of each ESI Disclosure & Discovery case.
13	General Security and Access	All EDRM Stages	Coordinate secure remote sharing	The delivered solution shall have a collaborative and private access ability (e.g. secure remote sharing of data with other agencies and expert witnesses), with access capabilities restricted to view only and as defined by the user granting the access.

14	General Security and Access	All EDRM Stages	Preliminary Design Document	Provides a detailed description of the delivered solution design for the pilot phase, as well as a detailed breakout of the functional design. Addresses issues such as, interfaces with other delivered solutions and hardware considerations.
15	General Security and Access	All EDRM Stages	Preliminary Design Document	The Design Document shall include, at a minimum: - Requirements reference; - Use Case reference; - Delivered solution architecture; - Relationship diagram(s); - Detailed functional hierarchy; - Logical and physical schemas and data-flow diagrams; - Module design and program specifications; - Screen mock-ups; - Delivered solution sizing specifications related to the delivered solution architecture including database and file utilization specifications; - Performance expectations; and - Back-up/recovery plan
16	General Security and Access	All EDRM Stages	Security	Does the software have an existing ATO with any DOJ Component? If not, is the software able to obtain an ATO under the current Risk Management Framework (RMF) requirements under DOJ 8500 and NIST RMF Requirements?
17	General Security and Access	All EDRM Stages	The delivered solution must be compatible information technology used by DEA	The delivered solution shall be capable of receiving ESI collected from information technology used by DEA, including, but not limited to virtual infrastructure (e.g. VDI), laptops, servers, tablets, smart phones, and cloud services (e.g. software as a service (SaaS), infrastructure as a service (IaaS), platform as a service (PaaS)).

18	General Security and Access	All EDM Stages	The delivered solution must be compatible with all major DEA systems	The delivered solution shall be compatible with and capable of collecting and importing ESI from major DEA systems and applications, including but not limited to all Outlook ESI (e.g., email, calendar, tasks, notes. etc....), Instant messaging (e.g. Microsoft Teams, Skype), All network drives (e.g. share drives and home directories), Various types of documents and file types including Microsoft Office documents (e.g., .msg, .doc .docx, .xls, .xlsx, .ppt, .pptx), Adobe documents (e.g. .pdf or Adobe portfolio, including embedded documents) and other document types (e.g. zip, CAD), Microsoft Visio, Microsoft Office 365, and systems, including, but not limited to, Microsoft Teams, DEA's case management system ("IMPACT"), and SharePoint
19	Capacity and Legal Hold	Identification, Preservation, & Collection	Import ESI data from applications as they are added to DEA's infrastructure	The delivered solution must permit the import of ESI data from all major DEA systems and applications, including but not limited to email, resident hard drives, share drives, the cloud, the Enterprise Business System, Teams, IMPACT, and others as added to DEA's approved software and hardware list.
20	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	The delivered solution shall have the capacity to import from a potential 9,000 accounts from Microsoft Active Directory as potential Legal Hold Custodians.
21	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	The delivered solution shall have the capacity to manage at least <<9,000>> active custodians
22	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	The delivered solution shall have the capacity for DEA personnel to manage legal holds

23	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	The delivered solution shall provide the user with options to view and track the legal hold status
24	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	The delivered solution shall provide the user with options to capture information like legal hold name, attorneys or access professionals assigned (for approval purposes), list of associated matters, list of recipients (which includes custodians and non-custodial data sources (“NCDS”)), date and time the hold is issued, name of the user issuing the hold, effective date range of the hold, date created, date approved, date sent, date acknowledged, date released etc. for each legal hold
25	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	The delivered solution shall provide the user with options to create legal hold notice templates for future use
26	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	The delivered solution shall provide the user with options to design a notice for each of the hold operations (Issue, Resend, Escalate, Reissue)
27	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	The delivered solution shall allow the user to attach a legal hold issue notice along with other notices to a legal hold
28	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	The delivered solution shall allow applicable legal team resources to select entire groups or departments for legal hold notice distribution
29	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	The delivered solution shall allow the user the capability to issue, send, and track all legal holds by custodian
30	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	The delivered solution shall allow the user the capability to track all legal holds by non-custodial data sources (NCDS) such as email systems
31	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	The delivered solution shall allow the user to upload and associate documents relevant to a particular legal hold

32	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	The delivered solution shall support the capability to collect legal hold status metrics such as counts of legal holds, number of custodians, custodians who have acknowledge receipts, count of holds released, actions taken by custodian, etc. (detailed metrics TBD)
33	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	The delivered solution shall provide ability to display snapshot/dashboard of high-level metrics for each legal hold such as number of custodians/data stewards who have acknowledged the receipt of hold notice, number of custodians/data stewards who have not acknowledged the receipt of the hold notice, number of custodians/data stewards released from the legal hold
34	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	The delivered solution shall restrict the users from viewing and/or editing a legal hold that has already been issued
35	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	The delivered solution shall permit re-issuing legal holds only to active and newly added custodians
36	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	The delivered solution shall support dynamic text inserts in the legal hold notice
37	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	The delivered solution shall allow a custodian or data steward to ask/send questions to legal team
38	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	The delivered solution shall support scheduling, conducting and tracking of multiple interviews per custodian/data steward in a hold. Ideally, the system will help set up automated reminders for record custodians and their supervisors
39	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	The delivered solution shall allow import of legal holds and matters (information and data) from third party eDiscovery and ESI Disclosure & Discovery solutions. This includes,

				but is not limited to: Microsoft “e-discovery” solutions (e.g. Office 365 and Microsoft Exchange Online) and inputs from other non-DEA entities in industry standard formats (e.g. load files).
40	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	The delivered solution shall provide the user with options to notify appropriate members when a custodian/data steward information changes (location, employment status).
41	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	The delivered solution shall allow litigation team members to manually send alerts/notifications to supervisors and to receive acknowledgment within the delivered solution.
42	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	The delivered solution shall allow the user to send email notifications based on role types and receive acknowledgment within the delivered solution.
43	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	The delivered solution shall allow the user to customize the reminders schedule
44	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	The delivered solution shall allow the user to set reminders for resending or escalating holds for non-compliant custodians
45	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	System shall allow the user to send litigation notices to external resources, including outside counsel, vendors and contractors
46	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	Capability to deliver all Litigation notices via E-mail to any agency employee.
47	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	Capability to create Litigation Hold and Release Templates and the ability to customize the Hold Notice language.
48	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	Litigation Holds/Releases/Surveys shall be digitally signed by the custodian and stored in the system.

49	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	Automatically E-mail reminders to continue to retain documents for litigation purposes on a customizable periodic basis.
50	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	Automatically E-mail reminders to custodians that have not signed a Litigation Hold Notice on a customizable periodic basis.
51	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	Send E-mail users a notice when a Litigation Hold has been removed, they no longer need to retain Email for litigation purposes.
52	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	Automatically email a copy of the signed notice to the custodian upon completion of the notice.
53	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	Capability to perform Custodian Surveys and to customize the survey form.
54	Capacity and Legal Hold	Identification, Preservation, & Collection	Legal Hold	Capability to display, by matter and on a single screen for the end user, important information on the status of each litigation hold notice including the identity of the custodian, the date of the hold notice, whether and when the custodian signed the hold notice, and date information on upcoming reminder or follow up notices.
55	Capacity and Legal Hold	Identification, Preservation, & Collection	User Capacity	The delivered solution shall have the capacity to allow a specified number of concurrent users and an unlimited number of named users.

56	Document Collection	Collection & Processing	Document types	The delivered solution shall have the capability to import the following document types at a minimum: - Microsoft PST files - Loose emails in .msg format - Microsoft Office documents such as: - Word processing documents (e.g., .doc); - Microsoft Teams data - Spreadsheets (e.g., .xls); - Presentation program files (e.g., .ppt); - Visio documents - notetaking files (e.g., Microsoft One Note); - Adobe files (e.g. pdf, Adobe archive, and files embedded in Adobe files) - SharePoint - WordPerfect documents - Web Pages - Pictures - Zip Files and their contents - CAD files - Common video formats (e.g. MPEG, MOV, MP4, WMV, FLV, AVI, ASF, QT, SWF, 3GP, WMA, OGG, AAC)
57	Document Collection	Collection & Processing	Integrity Checks	The delivered solution shall incorporate the following automated, DEA-specific, integrity checks during the data loading process: - For productions that include native files, the delivered solution shall verify that the native file exists at the path specified by the native file link in the database upon completion of data load. - For productions that include native files, the delivered solution shall report any file paths that exceed 217 characters for Microsoft Excel files and 255 characters for all other file types.

				- For all types of productions, the delivered solution shall validate date fields within the database and report the bad date records in an exception file. - For delimited text file productions, the delivered solution shall read and store time and time zone values from separate fields or combined date and time fields. If no time zone information is provided, the system shall allow an administrator to set an assumed time zone value. - For delimited text file productions, the delivered solution shall check consistency of zero padding in Bates number fields.
58	Document Collection	Collection & Processing	Integrity Checks	The delivered solution shall examine the Bates format(s) in a case and report the alphabetic prefix(es) and the number of digits for the numeric portion of the Bates number. - Load files should conform to ANSI, UTF-8, UTF-16LE, and UTF-BE (UTF-32) standards
59	Document Collection	Collection & Processing	NIST Filtering	The delivered solution shall have the capability to filter out system documents (NIST Filtering).
60	Document Collection	Collection & Processing	Statistics	The delivered solution shall store statistics upon data load such as document types, the number of documents in the repository, the date documents were loaded, and shall provide the ability to generate a report on those statistics.
61	Document Collection	Collection & Processing	Statistics	Upon data load, the delivered solution shall store statistics such as the number of emails and the number of attachments loaded and shall be able to generate a report on those statistics.
62	Document Collection	Collection, Processing, Review & Analysis	Adding data to a case while a case is in use	The delivered solution shall be capable of adding new data to a case while users are accessing and using the case.

63	Document Collection	Collection, Processing, Review & Analysis	Custom fields in database	The delivered solution shall allow an unlimited number of custom fields in the database. The vendor must describe the limits or constraints.
64	Document Collection	Collection, Processing, Review & Analysis	Data dictionary	The delivered solution shall provide a data dictionary built from all data loaded into the case (including word counts).
65	Document Collection	Collection, Processing, Review & Analysis	Data dictionary	The delivered solution shall provide the user the ability to view the data dictionary.
66	Document Collection	Collection, Processing, Review & Analysis	Hidden Columns	The delivered solution shall identify documents with hidden columns by marking the documents in a field in the database.
67	Document Collection	Collection, Processing, Review & Analysis	Hidden Rows	The delivered solution shall identify documents with hidden rows/columns by marking the documents in a field in the database.
68	Document Collection	Collection, Processing, Review & Analysis	Hidden Text	The delivered solution shall identify documents with hidden text by marking the documents in a field in the database. An example of hidden text is font text identical to the background, typically white on white.
69	Document Collection	Collection, Processing, Review & Analysis	Moving between datasets	The delivered solution shall be capable of moving records from one dataset to another dataset that has a different field structure.
70	Document Collection	Collection, Processing, Review & Analysis	Normalizing data fields	The delivered solution shall load new data to a case with different fields than data previously loaded to the case and normalize the fields to DEA standard field names and field types.
71	Document Collection	Collection, Processing, Review & Analysis	Overlay data capabilities	The delivered solution shall overlay data into a case. For example, an outside party produces an EDRM XML collection that contains bad dates. The DEA requests the outside party to provide a corrected version, but in the interim, the end-user wants to review/tag the documents. When

				the corrected data is redelivered, the data will overlay the existing data using a unique record identifier to match the new data to the correct records.
72	Document Collection	Collection, Processing, Review & Analysis	Overlay data capabilities	The delivered solution shall automatically run processes to populate fields during a bulk overlay that were run in the initial data loading.
73	Document Collection	Collection, Processing, Review & Analysis	Removing data from a case while case in use	The delivered solution shall be capable of removing documents from a case while users are accessing and using the case.
74	Document Collection	Collection, Processing, Review & Analysis	Tracked changes documents	The delivered solution shall identify documents with tracked changes by marking the documents in a field in the database.
75	Document Collection	Collection, Processing, Review & Analysis	Foreign language identification	The delivered solution shall identify foreign language documents by marking the documents in a field in the database.
76	Document Collection	Processing	Allow auto-decryption	The delivered solution shall permit the import of passwords and private keys for automatic decryption. The software should also make use of a password bank that can unlock documents without altering metadata and allow for the reprocessing of the decrypted archive while maintaining the preexisting tree/evidence structure
77	Document Collection	Processing	Audio and video files	The delivered solution shall load audio files (e.g. voicemail, .wav, .mp3), video files and associated meta data.
78	Document Collection	Processing	Capturing folder names	The delivered solution shall process data files according to information provided in the structure of folder names (e.g., CASE# Company-Firm Custodian Production Date) and shall capture information from the different levels of the folder structure into different fields in the database.

79	Document Collection	Processing	Conversion to readable formats - Automatic OCR	The delivered solution shall have the capability to automatically OCR non-text-based documents when they are imported and to generate an exception handling report or log file for documents or ESI that cannot be automatically converted to OCR.
80	Document Collection	Processing	Conversion to readable formats - compound files	The delivered solution shall have the ability to load native files, including email stores, loose files, PDF files, and compressed archive files (e.g., .zip, .rar, .L01, E01, AD1), and shall have the ability to extract all files from compound files and create a separate record for each extracted file (e.g., .zip, .rar, .L01, E01, AD1). The application shall not include the original compound file as a document.
81	Document Collection	Processing	Delimited text files	The delivered solution shall load delimited text file with specific delimiters and field order, and image cross-referenced files and JPG files.
82	Document Collection	Processing	Delimited text files	The delivered solution shall load delimited text file with specific delimiters and field order, image cross-referenced files, single or multi-page OCR text files and TIFF or PDF files.
83	Document Collection	Processing	EDRM XML load files	The delivered solution shall load EDRM XML load files.
84	Document Collection	Processing	E-mail files from a wide variety of formats	The delivered solution shall load email files from a wide variety of formats, such as, PST, MSG, EML and DBX.
85	Document Collection	Processing	E-mail Header Information	The delivered solution shall extract and load all email header information (e.g. IP addresses)
86	Document Collection	Processing	Extract metadata	The delivered shall extract metadata values during the data loading process and load the metadata into fields in the application without modifying the original document or

				changing system and document metadata values.
87	Document Collection	Processing	Extract text	The delivered solution shall extract text from all native files, including email messages and attachments, during the data loading process and load all text in a field.
88	Document Collection	Processing	Extracting embedded metadata in pdf portfolios	The delivered solution shall extract embedded metadata for each document contained in a PDF portfolio file during the data loading process.
89	Document Collection	Processing	Extracting metadata from native files	The delivered solution shall extract metadata from each native file and load it into searchable fields during the data loading process.
90	Document Collection	Processing	Hash values	The delivered solution shall provide MD5, SHA-1, and SHA-256 hash value(s) in a field for native documents loaded.
91	Document Collection	Processing	Identify un-processable Files, Including Encrypted Files	The delivered solution shall identify any un-processable files in an exception handling report or a log file during the data loading process with the reason why the file could not be processed. Examples of reasons are corrupted, password protected, encrypted, unsupported file type, path too long (e.g., file path exceed 217 characters for Microsoft Excel files or 255 characters for other file types).
92	Document Collection	Processing	Load native and text files with varying encoding	The delivered solution shall load native and text files with varying encoding, such as, ASCII, UTF-8, UTF-16, UTF-32
93	Document Collection	Processing	Load native files from all levels of a folder structure	The delivered solution shall load native files from all levels in a folder structure.
94	Document Collection	Processing	Load report for loaded productions	The delivered solution shall provide a load report for all loaded productions including the number of documents, number of pages, date loaded, request/production identifier,

				exception files, and unsupported files.
95	Document Collection	Processing	Loading extracted OCR text	The delivered solution shall load extracted and OCR text into fields without limitations due to the size of the text.
96	Document Collection	Processing	Problem file report	The delivered solution shall for all exceptions in the data loading process, provide a problem file report, including the file name and path of the document and description of the problem. For example: corrupted, encrypted password protected, unsupported file type, path too long (file path exceeds 217 characters for Microsoft Excel files and 255 characters for all other file types).
97	Document Collection	Processing	Records for exception files	The delivered solution shall create an exception handling report or log file for exception files (e.g., non-supported, corrupted, password protected, encrypted) and include an exception field describing the problem; extract meta data available from the exception file and store it in fields; store a link to the exception file.
98	Document Collection	Processing	Separate records based on size of embedded or attached file	The delivered solution shall be configured to create or not create separate records for embedded and attached objects based on the size (in KB) of the embedded or attached object.
99	Document Collection	Processing	Separate records based on type or MIME type of embedded or attached file	The delivered solution shall be configured to create or not create separate records for embedded and attached files based on the file type or MIME type of the embedded or attached file.
100	Document Collection	Processing	Separate records for each native file	The delivered solution shall create a separate record for each native file during the data loading process. For example, separate records are created

				for an email and each attachment to the email.
101	Document Collection	Processing	Structured & Conceptual Analytics	The delivered solution should process and load files so as to allow all files to be used in analytical processes, including but not limited to: - Text searching, - Concept searching, - Data and file clustering, - Categorization of documents, - Technology Assisted Review (TAR), Continuous Active Learning (CAL), - Email threading analysis and view, - Textual near duplicate analysis, - Repeated content analysis, - Language identification analysis
102	Document Collection	Processing	Text Messages and Instant Messages	The delivered solution shall load short messages (SMS), including cellular text messages, online instant and chat messages, and social media messages (e.g., tweets).
103	Document Collection	Processing	Tiff or PDF Images and Bates endorsement	The delivered solution shall load all native ESI, create single page tagged image file format (TIFF) images or portable document format (PDF) files for each page, and apply Bates endorsement to documents upon loading, which should not cover any original document content
104	Document Collection	Processing	TIFF or PDF placeholder	For all exception files loaded, the delivered solution shall create and indicate the problem on the TIFF or PDF placeholder image, allow configurable fielded information to be written on the image, and load the problem description in a field in the database.
105	Document Collection	Processing	Uniquely number and hash native files	The delivered solution shall uniquely number and create hash values for native files, email messages, and attachments during the data loading process and store the unique number and value in a field.

106	Document Collection	Processing, Review & analysis	De-duplication & Near-Deduplication Percentages	The delivered solution shall determine the extent of similarity between files and assign a percentage of similarity.
107	Document Collection	Processing, Review & analysis	De-duplication & Near-Deduplication Percentages	The delivered solution shall allow administrators to set a threshold for considering documents near duplicates, such as 85% similar or 90% similar.
108	Document Collection	Processing, Review & analysis	De-duplication with new and prior data	After loading new data into the delivered solution, users shall have the option to de-duplicate newly added data against previously loaded data using MD5 or SHA.
109	Document Collection	Processing, Review & analysis	De-duplication with new and prior data	The delivered solution must be able to use the MD5 or SHA algorithm to assign unique hash values to newly processed files and compare them to previously hashed and loaded records for the purpose of segregating and/or removing files with identical hash values. De-duplication should allow for the enrichment of the files that were de-duplicated against so that all metadata is preserved
110	Document Collection	Processing, Review & analysis	Identifying near duplicates	The delivered solution shall identify exact and near duplicates. Near duplicates are electronic files with similarities in content, metadata, or both (e.g. document versions, emails sent to multiple custodians, different parts of email chains, or similar proposals sent to several clients).
111	Document Collection	Processing, Review & analysis	Parent/Child	The delivered solution shall maintain parent/child relationships between emails and attachments when loading email files. If conceptual and Boolean searching are both provided, the delivered solution shall allow the user to set either as their default search type.
112	Document Searches	Identification, Review & Analysis	Ability to choose between conceptual and	The delivered solution shall identify concepts - words and phrases with similar meanings in context - across all productions for a case and present

			Boolean searches	the most frequently occurring concepts to users as search options.
113	Document Searches	Identification, Review & Analysis	Concept searching	The delivered solution shall be able to search for a concept entered by a user.
114	Document Searches	Identification, Review & Analysis	Concept searching exclusion	The delivered solution shall allow an administrator to exclude repeated text from concept searching, such as a disclaimer at the end of every email in a production.
115	Document Searches	Identification, Review & Analysis	Fuzzy searching	The delivered solution shall provide compensating search functions to help reduce the impact of low Optical Character Recognition (OCR) confidence levels (e.g. fuzzy searching).
116	Document Searches	Identification, Review & Analysis	Hit highlighting	The delivered solution shall highlight terms in the all files that met the search criteria (Hit Highlighting)
117	Document Searches	Identification, Review & Analysis	Identify and review e-mail discussion threads	The delivered solution shall have the capability to identify and review E-mail discussion threads.
118	Document Searches	Identification, Review & Analysis	Near duplicates	The delivered solution shall have the capability to identify near duplicates.
119	Document Searches	Identification, Review & Analysis	Option to include attachments in searches	The delivered solution shall have the capability to return searches for emails with the option to either include or not include associated attachments regardless of search criteria specified for the email itself.
120	Document Searches	Identification, Review & Analysis	Predictive Coding and searching	When a set of documents is selected from searching, the delivered solution shall be able to execute a follow-up query that will present more documents like the selected ones (predictive coding or technology assisted review).
121	Document Searches	Identification, Review & Analysis	Preview in search results	The delivered solution shall have the capability to 'preview' E-mails in a search result set. The user should not have to 'open' an E-mail to make a quick assessment of the relevance of

				a document. This functionality can be a preview pane (similar to the Microsoft Outlook preview pane) or by other means such as a balloon appearing when the user hovers the mouse over an E-mail.
122	Document Searches	Identification, Review & Analysis	Save searches	The delivered solution shall have the capability to save search criteria and results including ability to further refine a search.
123	Document Searches	Identification, Review & Analysis	Schedule searching	The delivered solution shall have the capability to schedule searches. Results added to a case as a result of a schedule search shall be distinguishable from existing search results.
124	Document Searches	Identification, Review & Analysis	Search accuracy and repeatability	The delivered solution shall reliably search a dataset. Running the same search against the same documents more than once shall return the same results.
125	Document Searches	Identification, Review & Analysis	Search by document identifier	The delivered solution shall provide the ability to navigate to a specific Bates number, record number or document identifier (UUID/GUID) during document search.
126	Document Searches	Identification, Review & Analysis	Search by document	The delivered solution shall be able to search for application assigned Bates and document numbers, and Bates and document numbers provided by the producing party.
127	Document Searches	Identification, Review & Analysis	Identifier by application assigned Bates	The delivered solution shall be able to search for all documents with application assigned Bates/document numbers in a given range.
128	Document Searches	Identification, Review & Analysis	Search by document identifier by producing party	The delivered solution shall be able to search for all documents with a producing party provided Bates/document numbers in a given range.
129	Document Searches	Identification, Review & Analysis	Search by field and field exclusion	The delivered solution shall be able to search for a term in a specific field, while excluding occurrences of the term in all other fields.

130	Document Searches	Identification, Review & Analysis	Search by prefix	The delivered solution shall be able to search for all documents with a specific prefix.
131	Document Searches	Identification, Review & Analysis	Search notifications	The delivered solution shall provide email notifications when new documents are added to the delivered solution that meet pre-established search criteria. The delivered solution will enable the user to turn notifications on or off.
132	Document Searches	Identification, Review & Analysis	Search segregation	The delivered solution shall place a new document that meets preestablished search criteria in a folder for review.
133	Document Searches	Identification, Review & Analysis	Search Options with Attachments	The delivered solution shall provide clear, direct access to/from parent emails in an e-mail chain as well as their attachments.
134	Document Searches	Identification, Review & Analysis	Search sorting	The delivered solution shall allow the user to show or hide search results (e.g., domains, file types).
135	Document Searches	Identification, Review & Analysis	Search variations	The delivered solution shall search automatically on variations of search terms (tense, inflection, plurals, etc.) and provide the user with the ability to turn this function on or off. This functionality shall be available with conceptual and Boolean searching.
136	Document Searches	Identification, Review & Analysis	Search within a search	The delivered solution shall be capable of searching within a search (nested searches) as a user selected option.
137	Document Searches	Identification, Review & Analysis	Searching across all cases and documents	The delivered solution shall search across all cases (tens of thousands of document productions and hundreds of millions of documents). The vendor must explain if additional hardware or software is needed to achieve this.
138	Document Searches	Identification, Review & Analysis	Searching across all cases and documents	The delivered solution shall search across a selected group of cases (thousands of data collections and hundreds of millions of documents) in less than three minutes. Vendor

				must explain if additional hardware or software is needed to achieve this. If the vendor cannot conduct a search in less than three minutes, the Vendor shall specify capable period of time.
139	Document Searches	Identification, Review & Analysis	Searching autocomplete	After a user starts typing, the delivered solution shall automatically suggest the most common terms in the database that could complete the word being typed (auto-complete) and allow the user to continue typing and ignore suggestions.
140	Document Searches	Identification, Review & Analysis	Searching basics	The delivered solution shall support keyword, proximity, Boolean and wildcard searches at a minimum. The use of regular expression searching would be very helpful
141	Document Searches	Identification, Review & Analysis	Searching capabilities	The delivered solution shall search across selected multiple folders or tags.
142	Document Searches	Identification, Review & Analysis	Searching capabilities	The delivered solution shall allow for searching on specific characters (e.g. period, -, @, #, %, \$, &, !).
143	Document Searches	Identification, Review & Analysis	Searching capabilities	The delivered solution shall provide the capability to search within a document in one step. For example, the user can search by typing "control" and "f" or selecting a search bar from the document itself.
144	Document Searches	Identification, Review & Analysis	Searching capabilities - save searches	The delivered solution shall save searches, including both the query and results. Searches should also have the ability to make public or private or other security features indicating specific users or groups
145	Document Searches	Identification, Review & Analysis	Searching capabilities - search history	The delivered solution shall provide the user with the ability to view search history. The vendor must explain whether the # of searches or time period of saved searches is configurable.
146	Document Searches	Identification, Review & Analysis	Searching capabilities - search history	The delivered solution shall allow users to execute a previous search.

147	Document Searches	Identification, Review & Analysis	Searching capabilities - thesaurus	The delivered solution shall support standard and user- definable thesauri in searching and shall create a synonym list or concepts.
148	Document Searches	Identification, Review & Analysis	Searching e-mail attachments and embedded documents	The delivered solution shall have the ability to ingest mailboxes from Microsoft Exchange Online and shall search e-mail attachments and embedded documents within e-mails and other Outlook ESI and embedded documents within Outlook ESI.
149	Document Searches	Identification, Review & Analysis	Searching metadata	The delivered solution shall be able to search metadata, such as date, custodian, sender (or creator), recipient, copied recipients, and blind copied recipients. The delivered solution should be able to concurrently search multiple search parameters.
150	Document Searches	Identification, Review & Analysis	Searching on tags and metadata	The delivered solution shall provide the ability to search on "tags" and metadata, including custom tags and metadata.
151	Document Searches	Identification, Review & Analysis	Searching proximity	The delivered solution shall search for two text strings in proximity to each other within a document. The delivered solution shall allow the user to specify the order of the text strings and allow the user to define degree of proximity; e.g., within 5 words.
152	Document Searches	Identification, Review & Analysis	Searching speed	The delivered solution shall be capable of searching for text using Boolean logical functions (e.g., AND, OR, NOT); literal (e.g., "quotes"); wild cards (e.g., "!") and parentheses (e.g., denoting order of operations) in less than 5 seconds across 300 productions containing 1 million documents.
153	Document Searches	Identification, Review & Analysis	Searching speed	The delivered solution shall search documents using conceptual/natural language in less than 15 seconds across 300 productions containing 1 million documents.

154	Document Searches	Identification, Review & Analysis	sorting and filtering	The delivered solution should also be able to sort search results by one or more metadata fields, including by family. The search result set should be in order of relevance. If the result set is not automatically sorted by relevance, the user shall have a way of sorting the result set by order of relevance.
155	Document Review	Identification, Review & Analysis	Allow navigation from visual representation to individual documents	The delivered solution shall navigate directly from the visual representation to the individual documents.
156	Document Review	Identification, Review & Analysis	Analyze and show relationships among entities	The delivered solution shall analyze and visually present relationships among entities (ex: phone numbers, social networks, timeline, geospatial).
157	Document Review	Identification, Review & Analysis	Auto-populate database fields	The delivered solution shall extract and populate entities into database fields, with entity types based on events, individuals, organizations and other entities found automatically within the documents. It should have the ability to normalize specific named entities formats using regex and support including custom named entities for custom identifications.
158	Document Review	Identification, Review & Analysis	Classify by topic or concept	The delivered solution shall be capable of categorizing documents by topic or concept (ex: have sidebar of results which shows how search results have been grouped with ability to toggle this window).
159	Document Review	Identification, Review & Analysis	Clustering	The delivered solution shall be capable of clustering similar documents and present them graphically as well as explain method(s) of clustering.
160	Document Review	Identification, Review & Analysis	Clustering	The delivered solution shall be capable of modifying the level of clustering from broad to detailed.

161	Document Review	Identification, Review & Analysis	Common Privacy Information	The delivered solution shall be capable of running advanced searches to identify commonly protected information under the Privacy Act and other laws such as social security numbers, dates of birth and other personally identifiable information.
162	Document Review	Identification, Review & Analysis	Permit domain analysis	The delivered solution shall provide domain analysis - display all the domains in an email collection. (e.g. select a domain name, "dea.gov", and view all the documents within).
163	Document Review	Identification, Review & Analysis	Searching annotations	The delivered solution shall allow a user to search for the presence of an annotation and the content of an annotation
164	Document Review	Identification, Review & Analysis	Visually link to show relationships	The delivered solution shall visually link events, individuals, organizations and other entities extracted from documents to show relationships.
165	Document Review	Processing, Review & Analysis	Allow for predictive coding and Technology Assisted Review (TAR) and Continuous Active Learning (CAL)	In addition to manual coding by DEA users, the delivered solution shall offer DEA the choice to obtain assistance in predictive coding and technology assisted review on a case by case basis. However, all documents and files should be processed ready for predictive coding and TAR analysis.
166	Document Review	Processing, Review & Analysis	Allow the user to create user defined tags	The delivered solution shall have the capability to create user multiple defined tags for issues, relevance, and the nature and basis for privilege.
167	Document Review	Processing, Review & Analysis	Bulk coding	The delivered solution shall have the capability to select and place multiple issue tags and privilege tags on multiple documents at one time (bulk coding).
168	Document Review	Processing, Review & Analysis	E-mail Threading	The delivered solution shall be capable of displaying the sequence of

				an email conversation or the entire thread of related emails.
169	Document Review	Processing, Review & Analysis	Identify tags without opening the document	The delivered solution shall have the capability to identify what tag(s) are assigned to a document without having to open the document.
170	Document Review	Processing, Review & Analysis	Preview e-mails while reviewing	The delivered solution shall have the capability to allow the user to 'preview' documents in a search result set without opening the E-mail.
171	Document Review	Processing, Review & Analysis	Preview e-mails while reviewing	The delivered solution shall have the capability to open documents in a viewer, in native format, or in extracted-text format.
172	Document Review	Processing, Review & Analysis	Time to load and open documents	The time period in which documents will load and open shall be less than 30 seconds.
173	Document Review	Review, Analysis & Production	Allow highlighting	Allow users to highlight selected portions of images.
174	Document Review	Review, Analysis & Production	Annotations	The delivered solution shall allow users to create annotations on images (sticky notes)
175	Document Review	Review, Analysis & Production	Customizable zoom	The delivered solution shall allow users to set a zoom level on images and maintain this level as the user flips between pages and documents without resetting to a default zoom.
176	Document Review	Review, Analysis & Production	Customized text labeling redactions	The delivered solution shall allow users to add a customizable text either over a redaction or in the margin immediately next to the redaction to indicate why the document was redacted.
177	Document Review	Review, Analysis & Production	Default display	Support fit to height and width as a default display mode for images.
178	Document Review	Review, Analysis & Production	ID documents without TIFF or PDF images	Within a selected set of documents, allow users to identify documents that do not have associated TIFF or PDF images.

179	Document Review	Review, Analysis & Production	Print WYSIWYG	The delivered solution shall allow the user to print WYSIWYG (“What You See Is What You Get”) – zoom in on image and print as it is viewed on the screen.
180	Document Review	Review, Analysis & Production	Printing on DOJ networks	Support Printing mechanism over multiple firewalls and remote accessing facilities as well as support for batch printing of multiple documents in a single operation; and in either native form or pdf or concatenated image ranges (with or without redactions/markup)
181	Document Review	Review, Analysis & Production	Query redacted documents	Allow users to query redacted and/or annotated documents.
182	Document Review	Review, Analysis & Production	Redaction removal	The delivered solution shall allow users to remove the redaction placed on a document prior to the redaction being finalized (or "burnt") onto the production.
183	Document Review	Review, Analysis & Production	Redactions	The delivered solution shall allow for attorneys, legal staff or technicians to apply redactions to ESI while preserving original ESI and evidentiary metadata. Specifically, the delivered solution shall allow: - The capability to perform manual redactions where the user draws a box around the information they want redacted. - The capability for the user to select FOIA exemptions, privilege designations, and/or other types of redactions and place the applicable privilege or exemption within the redaction or in the margin next to the redaction. - The capability to search text and automatically apply redactions or otherwise identify the found text and mark the text for redaction. - The capability to redact both text and graphics.

				- The capability to apply a redaction caption describing the reason for redaction. This requirement applies to manual redactions and redactions as a result of a “search and redact” above. - The capability for the user to select FOIA exemptions, privilege designations, and/or other types of redactions for single or multiple redactions across the page and/or across the document. - The capability to select multiple FOIA exemptions and privilege designations for any redaction. - Redactions must occur without altering the original document. - The system should create a forensic copy and apply any redactions to that copy.
184	Document Review	Review, Analysis & Production	Rotate images	Allow users to set rotation on images and maintain this orientation as the user flips between pages and documents without resetting to a default orientation.
185	Document Review	Review, Analysis & Production	Viewing after redactions	The delivered solution will allow users to view a document that has been marked for redaction (but which has not had that redaction applied) without the redaction mark-up, i.e., as the original document. The delivered solution will also allow users to view both the original document and the redacted document to view redacted content.
186	Document Review	Review, Analysis & Production	Zoom images	Selectively zoom in and out on images.
187	Document Productions	Production	Ability to pause production	Capability to pause the processing of a production manually in order to reprioritize multiple jobs.
188	Document Productions	Production	Bates stamp by family	Document productions shall have the capability to be: - Bates Stamped sorted by family (i.e. producing an email and all

				attachments immediately following), - Chronologically, and - By custom tags.
189	Document Productions	Production	Bates stamp capabilities	The delivered solution shall have the capability to produce at a minimum 100,000 Bates Stamped pages in a single production
190	Document Productions	Production	Bates stamp customization	The delivered solution shall be capable of creating a Bates Stamp per page or per document: - Bates stamp pages in multiple locations, including lower-right corner. - Allows the user to create a customizable prefix and suffix to the Bates number. i.e., “DEA – 0000001–LAW ENFORCEMENT SENSITIVE”. - Print Bates stamped pages with original page numbers. - Export multiple productions with consecutive Bates pages. This includes the ability to manually input the starting Bates number.
191	Document Productions	Production	Concurrent actions during production	Create images, write native files, and create the .dat file concurrently during production processing.
192	Document Productions	Production	Create TIFF or PDF images and Bates number	Create TIFF or PDF images and electronically Bates endorse images for documents being produced out.
193	Document Productions	Production	Customize output	Customize folder/directory names and structure for output of native and image files in a production.
194	Document Productions	Production	Document level text files	Export document level text files or inline text within a .dat file
195	Document Productions	Production	Endorse a document with metadata field or custom created tags	Capability to endorse documents with Metadata fields including custom created tags.

196	Document Productions	Production	Endorse a document with text	The delivered solution shall have the capability to endorse documents with text (e.g. "For Attorney's Eyes Only - Under Protective Order").
197	Document Productions	Production	Exclude empty fields	Exclude empty fields from a production set.
198	Document Productions	Production	Exclude produced documents by tag or database field value	Prevent production of documents selected by a tag or database field value.
199	Document Productions	Production	Exported data changes	Allow changes to the exported data (fields/tags) while documents are checked out and import changes when the documents are checked back in.
200	Document Productions	Production	Format	The delivered system shall be able to output results in HTML, EDRM XML, Native, TIFF, and PDF formats.
201	Document Productions	Production	Generating TIFF files	Tiffing in B&W/Grayscale/Color should all be supported. Tiffs should be generated using the Tiff Standard - Group IV (CITT Group 4 Compression) also as dictated by Library of Congress (https://www.loc.gov/preservation/digital/formats/fdd/fdd000024.shtml#aka Tiff Bitmap with Group 4 Compression). The ability to specify Placeholders tiffs (with custom text) for specific file types based on a variety of factors (size/page length/tag) etc.
202	Document Productions	Production	Import the newly produced Bates fields into the delivered solution	For produced documents, write the newly endorsed beginning and ending Bates numbers of the documents back to fields in the delivered solution. The ability to rebrand and/or renumber an existing production while maintaining the original order of produced documents.

203	Document Productions	Production	Import the newly produced Bates fields into the delivered solution	For produced documents, write the newly endorsed beginning and ending Bates numbers of the documents back to searchable fields, which are available for review in the displayable field list.
204	Document Productions	Production	Industry standard files	Create productions in an industry standard delimited text file format (e.g., standard Autonomy or Concordance *.dat, *.log and/or *.opt files or Summation *.txt and *.dii files) or EDRM file format, XML, "Concordance Standard" and PDF formats
205	Document Productions	Production	Multiple productions with append capability	Track multiple production Bates numbers and append them to a given field in the database without overwriting previous entries in the field.
206	Document Productions	Production	Native capabilities	The delivery system shall have the capability to produce at a minimum 20,000 native documents in a single production.
207	Document Productions	Production	Page level suffixes	Create page level suffixes on a record-by-record bases.
208	Document Productions	Production	Permit additional TIFF or PDF images within Bates number sequence	Allow users to create additional TIFF or PDF images with Bates numbers in sequence
209	Document Productions	Production	Produce a document multiple times w/ multiple Bates numbers	The delivered solution shall be capable of producing a document multiple times with different Bates numbers and maintain the different Bates numbers in database fields.
210	Document Productions	Production	Produce chronologically	The delivered solution shall have the capability to order productions chronologically.
211	Document Productions	Production	Produce native and image documents while	Produce native and image (TIFF/JPG/PDF) documents from the application while removing any work product (e.g., tags, notes, internal

			removing work product	IDs/DBs/servers, network info/UNC paths).
212	Document Productions	Production	Production based on tag, search results or folder	Allow users to create TIFF or PDF images and electronically Bates endorse a set of documents with a Bates prefix and sequence selected by the user based on documents in search results or a tag or folder.
213	Document Productions	Production	Production OCR	The delivered solution shall have the capability to mass OCR PDF images for individual documents, groups of documents, and productions of documents.
214	Document Productions	Production	Production based on target media	The delivered solution shall segment output folders for a production based on target media type (e.g. divide and assign size by media). The software should also have the ability to limit the total numbers of files produced / exported to a single directory with a minimum threshold of 5,000 / 10,000 files
215	Document Productions	Production	Production details after a production	Provide production size and reports about the production when the application finishes creating a production.
216	Document Productions	Production	Production estimate before running production	Provide an estimate of production size before running/exporting a document production both at the case level and tag level
217	Document Productions	Production	Production recovery/restore when system failure occurs	Recover/restore a production in progress when a system failure occurs while minimizing the loss of work.
218	Document Productions	Production	Report errors during production process	Report on any errors during the production process.
219	Document Productions	Production	Reusable templates	Create reusable templates for productions to minimize redundant data entry and minimize navigation for production creation and export.
220	Document Productions	Production	Set default Bates prefix	Allow a system administrator or super user to set a default Bates

				prefix for user created TIFF or PDF images.
221	Document Productions	Production	Store Bates numbers in searchable fields	When users create TIFF or PDF images, the delivered solution has the ability to store Bates numbers in searchable fields.
222	Document Productions	Production	System admin limits	Allow a system administrator or super user to set a limit on the number of documents or pages a user can create TIFF or PDF images of and Bates endorse.
223	Document Productions	Production	System admin restrictions	Allow a system administrator or super user to restrict use of production functions to a system administrator or super user group or role.
224	Document Productions	Production	System admin restrictions	Allow a system administrator to set a limit on the number of documents or size of collection users can check out or export.
225	Document Productions	Production	Track Bates numbers for sequence	Track the Bates numbers used when creating TIFF or PDF images, so Bates numbers are used sequentially and not used more than once.
226	Document Productions	Production	Unique Bates endorsement	Allow users to choose to Bates endorse documents using the unique document identifier in the delivered solution
227	Document Productions	Production & Presentation	Capability to generate 100 GB of native/TIFF/PDF images per day	Capability to generate up to 100 GB of native/TIFF/PDF documents per day.
228	Document Productions	Production & Presentation	Capability to generate 100,000 pages of TIFF or PDF images per day	At a minimum, be able to generate up to 100,000 pages of TIFF or PDF images per day.
229	Document Productions	Production & Presentation	Easily convert to pdf	The delivered solution shall allow a user to create PDF versions of a set of documents in no more than 3 steps

				and export pdf files to a local storage device
230	Document Productions	Production & Presentation	Print with separator sheet	The delivered solution shall have the option to print with separator sheets (when printing multiple documents).
231	Document Productions	Production & Presentation	Print without markups	The delivered solution shall allow a user to print a document without markups (e.g. redactions, annotations)
232	Document Productions	Production & Presentation	Production format capabilities	The delivered solution shall be capable of importing and producing documents to and from CD, DVD, hard drive, secure transfer protocol (ftp), tape and various industry standard file formats (e.g., PDF, TIFF, PST, Concordance, Autonomy database, EDRM XML database)
233	Document Productions	Production & Presentation	Production format capabilities	The delivered solution shall be capable of presenting ESI in native and processed formats at appropriate forum proceedings including depositions, trials and hearings.
234	Document Productions	Review, Analysis & Production	Excluding tagged information in a production	The delivered solution shall have the ability to exclude tagged or marked information from a production. For example, documents marked as privileged or non-responsive shall be separated from the output and kept in another file/folder
235	Reporting	Processing, Review and Analysis	Statistical random sampling	The delivered solution shall have the capability to run statistically valid random sampling on data identified by users. The random sampling capability should provide results based on confidence level, margin of error, population size and response distribution.

- What approaches are available for providing topical authority site search and matching relevant content to searcher needs? (Described content, text matching, ranking factors, topic and job role affiliation, etc.)?
- What methods are available to exclude content matches when access is to be restricted?

- Describe how the various internal components of search mechanism are managed (policies, events, users, indexing methods, etc.).
- For backlinks and ranking factors – can your tool use H1/H2, etc., anchor text keywords for control and search/search ranking factors?

Infrastructure Requirements

Feature	Supported in Current Version	Not Supported
Infrastructure components capable of being installed on Microsoft Windows Server 2025 64-bit.		
Workstation agent components support Microsoft Windows 11 Enterprise.		
Workstation agent components support Citrix VDI.		
Feature	Supported in Current Version	Not Supported
Infrastructure components capable of being installed in VMware.		
Infrastructure components capable of being installed in Amazon Web Services (“AWS”).		
Infrastructure components capable of being installed in Microsoft Azure.		
Ability to manage infrastructure and agents updates from a single centralized location – including, but not limited to; updates, logging, log collection, service management, status and reporting.		
Ability to upgrade infrastructure in phased approach (e.g. distributed components can be updated during or after the centralized management infrastructure).		
Verification that all system components can be installed and operated on Defense Information System Agency (DISA) Security Technical Implementation Guide (STIG) compliant platforms including but not limited to Operating System, Database, Application and Web Servers.		
Ability to provide all solution documentation for installation and operations of system components on DISA STIG compliant platforms, including exceptions and mitigations required by the solution to operate.		
Ability to distribute infrastructure components to multi-tier and geographical disparate locations.		
Ability to control management infrastructure resources; Processor, Network Bandwidth, Memory, etc.		
Ability to distribute and scale infrastructure to increase performance and prevent service outages		
Microsoft Azure Cloud hosted		
Amazon Web Service Cloud Hosted		

- How are your product components managed from an administrative perspective (Deployment, updates, monitoring, etc.)?

- Has your product been deployed within a DOJ environment before?
 - a. Are any special modifications or adjustments required to conform to DISA STIG requirements?
- How often are software updates made available for your product?
- How often are security updates made available for your product?
- How are updates made to your product?
- What underlying technologies is your solution dependent on (Database, OS, Web Server, etc.)?
- Are there any infrastructure components that are not recommended for virtualization?
- Does your product contain any native disaster recovery capabilities, if so, what are they?
- How does your product alert the admin on error conditions (Scan errors, agent errors, etc.)?
- What is your SLA for new OS and Version support?
- For SaaS application/environment – what type of environment is used (i.e. Microsoft Azure, AWS, etc.)?

Security Requirements

Feature	Supported in Current Version	Not Supported
Meet or exceed FIPS -140-2 compliance for cryptographic standards		
All hashing and encryption functions will be NIST compliant, including the migration of SHA-256.		
Feature	Supported in Current Version	Not Supported
Support of DOJ PKI/CAC/PIV Smart Card based authentication for all user authentication, including but not limited to web portals.		
Federal compliant encrypted communications between users and infrastructure, between infrastructure components and between agents and infrastructure.		
Federal compliant data encryption for stored events, incidents, audit logs and incident data		
Auditing and event logging for administrator and user actions		
Support the offloading of core system logging, export syslog		
Support for Microsoft Active Directory integration for user authentication		
Granular role-based access control for centralized management functions, distributed agent and scanner functions and end-point agent functions		
Ability to import and use DOJ signed certificates for secure communications		
FEDRAMP Plus certification as required for SaaS and cloud environment hosting. The Federal Risk and Authorization Management Program, or FedRAMP, is a government-wide program that provides a standardized approach to security assessment, authorization, and continuous monitoring for cloud products and services. <i>See https://www.fedramp.gov.</i>		

- What cryptographic standards and hashing and encryption functions are leveraged by your product out of the box?
- Does your product integrate with Smart Card Authentication?
- Describe your Role-Based Access Control (“RBAC”) capabilities. Are you able to control access to individual records, reports, dashboards, other? Does it perform Early Binding?
- How is the data collected by your product protected (storage of repository(s) site indexes, event data, user data, credentials, cookie data, previous search attempts, etc.)?
- Do you currently have a FEDRAMP Plus certification as required by the Department of Justice for operation as a SaaS?

Features and Capability Requirements

Feature	Supported in Current Version	Not Supported
Out of the box site indexing		
Out of the box web site and repository crawling/indexing capabilities		
Ability to create custom policies to manage search result access		
Capability to customize out of the box policies to define inclusions, exclusions, comparisons and correlations		
Out of the box summary, detail, comparison, executive and historical reporting for search result queries		
Ability to create customized reporting to include real time dashboards relevant to search activities by users.		
Ability to customize out of the box reports		
Feature	Supported in Current Version	Not Supported
Reports, search results success, and time on site detail exports support the following file types: excel, XML, csv or tab delimited		
Ability to detect content based on relevance to user by search action and modern machine learning/AI methods (keywords, job role, file hashing, established indexed meta data, exact file matching, partial file matching, regular expressions, etc.)		
Ability to include and exclude content matches based on keyword proximity and file hashing.		
Ability to provide file name, file owner, content location, created date, last modified date, historic use, file size and file hash for all search results		
Customizable search and ranking workflow		
Ability to import and export policies, events, users, reports and other logical management components		
Detection exclusions can be configured to be based on a per match basis as opposed to a per file basis		
Ability to determine if event has been detected and previously identified as false positive based on file hash		
Support for standard file types such as MS Office, text, and PDF.		

Support for Optical Character Recognition		
Integration with multiple software platform types (SAP, Microsoft Office 365, etc.)		
Out of the box reporting and real-time dashboard search tracking analytics		

- What capabilities exist and describe search ranking methods?
- How is any secondary indexing protected by your product?
- What capabilities exist to eliminate false positives produced by your product?
- What visibility/content does your product produce on a DLP content match (File metadata, user data, transmission data, etc.)?
- What out of the box remediation actions are available with your product?
- What reporting and logging capabilities are native to your product? (dashboards, time on search, etc.)

Data at Rest (DEA)

Feature	Supported in Current Version	Not Supported
Ability to scan data repositories via dedicated scan appliance		
Ability to scan data repositories via installed scan agent		
Ability to scan DOJ Office 365 Cloud Services (SharePoint, Exchange, OneDrive)		
Ability to scan SAP repositories		
Ability to scan Oracle Database Repositories		
Ability to scan SQL Database Repositories		
Ability to scan record management approved repositories		
Ability to scan DB2 Database Repositories		
Ability to scan within compressed and zipped archives		
Ability to complete differential scanning (e.g. only scan content that has change from the previous scan)		
Feature	Supported in Current Version	Not Supported
When using an agent-based scanner, have the capability to throttle scanning based on system resources such as disk I/O, CPU utilization and memory usage		
Ability to report on scan failures		
Ability to schedule scans based on time/date and recurrence		
Ability to test scan to ensure proper access and configuration of scan target(s)		
Ability implement network throttling on scans		
Ability to discover and connect to local or network-based data repositories		
Ability to distribute and scale scanning capabilities to increase performance and prevent service outages		

--	--	--

- What methods does your product leverage to discover and monitor its infrastructure? (Installed agent, temp agent, scanner, other)
- What infrastructure does your product require as part of an on-prem installation to DEA?
- If you leverage scanning technology, what limitations on amount of data does your product have? (doc size, repository size, other)
 - How many gigs per hour is your general guidance?
 - Is there a repository size limit? What limit would be suggested for efficiency?
- What network throttling capabilities does your product contain for DEA scanning?
- What enforcement options are available for DEA?
- What remediation options are available for identified malware (Alert, quarantine, delete, tag)?
- What types of metadata does your product pull on processed files (Last modified by, modified date, creation date, etc.)? Does your product come preconfigured to index and hold specific data to aid in search result efforts?
- What reporting options are available in regards to network scan failures in your product?
- What options are available for the scheduling of network scans within your product?
- What capabilities does your product contain for the discovery of data repositories (agent based (local), network based, etc.)?
- Technically how does your product perform differential scanning?
 - What limitations exist?
- What is the typical performance impact if performed as a SaaS versus local network installation?
 - Does your product have throttling capabilities (scan on idle)?
 - Can you dictate the max amount of resource usage?

Integrations

Feature	Supported in Current Version	Not Supported
Native Restful API		
Support for Microsoft Azure Information Protection		
Ability to integrate with major content repositories, including but not limited to Office 365 products, etc.?		
Feature	Supported in Current Version	Not Supported
Ability to integrate with major Security Information and Event Management Systems (SIEM)		
Ability to enrich search and ranking results with data collected from other data sources such as Active Directory and other relational databases for use in search mechanism and access control.		

- Is a Software Development Kit (SDK) available?
 - If so, what programming languages are supported?
- If you have an API, are all functions available in the user interface available within the API?
 - If not, what functionality is missing in the API?
 - Is your API documented, including example scripts/functions?
 - Do you have a community site dedicated to your API (GitHub, user portal, etc.)?
- Do you support Microsoft Azure Information Protection, if so, how?
 - Do you support two-way sync of Microsoft Azure Information Protection Tagging?
 - What other features/functionality are supported?
 - What features/functions are not supported?
- What out of the box integrations does your product support (3rd party toolsets)?
- What incident response orchestration and automation platforms have you integrated with?
- What third party integrations do you typically see your customers leveraging?

Licensing and Training prices

- What licensing model does your company use? Perpetual? Concurrent users? Total users?
- What pricing model does your company use? What would be the estimated range of prices for the following:
 - 1-200 total users, 50 concurrent users
- What training does your company offer?
- What range of prices does your company offer for the various sorts of training?
- Please describe your training programs.
- Please provide approximate pricing information to allow the Administration to compare the costs and benefits of the Administration hosting the software in DEA's network (Firebird), contracted cloud (e.g. Azure, AWS, etc.), or Software as a Service (SaaS).
- If providing SaaS, please provide pricing information per GB stored in various cloud environments.

9.0 ROUGH ORDER OF MAGNITUDE (ROM) REQUEST

The Government requests Vendors to provide an, as detailed as possible, rough order magnitude outlining, at a minimum, the following anticipated cost factors:

1. Licensing Costs
 - a. Provide Average Annual Cost for this experience
 - b. Provide Licensing Structure (i.e. per user, per core, etc.)
 - c. Provide Pricing Tiers if applicable
 - d. Additional/Add-on Licenses (i.e., A.I. models and/or licensing for same)
 - e. Additional Fees (as applicable)
 - f. What the fees are derived from

2. Cloud/Software Costs
 - a. Identify the Hosting CSP and Environments (i.e. On Prem, GovCloud vs Vendor Cloud or Hybrid)
 - b. Provide Average Annual Storage Costs for this experience
 - c. Provide Average Annual Compute Costs for this experience
 - d. Provide Software versions and license counts if applicable
3. Implementation/Integration Labor Costs
 - a. Provide Average Annual Development Costs
 - i. Provide number of Full Time Employees (If possible, Labor Categories)
 - b. Provide Average Annual Operations and Maintenance Costs
 - i. Provide number of Full Time Employees (If possible, Labor Categories)
4. Training and Documentation
5. Data Migration or egress costs
6. Costs between different FedRAMP environments
7. AI related costs

The Government requests that Vendor's identify which cost inputs directly relate to DEA's discussed Case Management System future state and DEA's discussed Investigative Ecosystem future state (See Section **4.0 REFINEMENT OF REQUIREMENTS**).

CONCLUSION:

This RFI is intended to afford the open market an opportunity to provide comments regarding this effort to the Government. **The Government will not be conducting a Q&A period due to updated submission timeline and organizational priorities.**

The Government reserves the right to hold industry engagement opportunities, virtually or in person, with any responsible and capable vendor and may contact vendors for demonstrations based on responses provided to this RFI. **If a vendor's product is deemed best suited for a particular piece of the overall RFI, the Government may split this RFI into multiple subparts as necessary to meet the Government's needs.** If the Government determines that vendor engagement meetings/demonstrations are needed then, ALL EXPENSES INCURRED AS A RESULT IS THE VENDORS RESPONSIBILITY. THE GOVERNMENT WILL NOT FUND OR REIMBURSE ANY EXPENSES.
