

National Geospatial-Intelligence Agency

MANUAL

NUMBER 4160.1

16 May 2017

Administrative Update 2, 05 April 2024

SI

SUBJECT: Accountability and Management of Property, Plant, Equipment, and Other Accountable Property

References: See Enclosure 1.

1. PURPOSE: This Manual:

a. Assigns responsibilities and provides procedures that comply with DoD Property accountability and financial management regulations in accordance with (IAW) Reference (d e).

b. Outlines requirements that reflect accountability of property management, including the documentation of lifecycle events and transactions. Total Asset Management (TAM) uses a holistic, inclusive, and coordinated approach to managing assets. It coordinates asset-related business processes across multiple business units, integrates asset-related information systems, and adopts best practices for maintaining and using information.

c. Implements, standardizes, and provides procedures for Acquire to Retire (A2R) lifecycle property management through the PeopleSoft Asset Management (PS-AM) System as the TAM Accountable Property System of Record (APSR), which ensures the effective and efficient management of NGA's accountable assets IAW References (d e), (e f), and (i n).

2. APPLICABILITY. This Manual applies to:

a. NGA civilian employees, military service members, other government agency personnel assigned to NGA, and contractors, hereinafter referred to as personnel.

b. All personnel responsible for managing assets, regardless of the method of procurement. This includes Accountable Property Officers (APO), Senior Property Administrators, Property Administrators (PA), Program Managers (PM), Program Asset Managers (PAM), Asset Custodians (AC), Plant Clearance Officers (PLCO), Contracting Officers/Contracting Officer Representatives (CO/COR), and any other personnel with a role in NGA's property management processes.

3. DEFINITIONS. See Glossary.
4. RESPONSIBILITIES. See Enclosure 2.
5. PROCEDURES. See Enclosures 3 through 11.
6. EFFECTIVE DATE. This Manual is effective on the date of signature.

A handwritten signature in purple ink, appearing to read 'AWH', with a stylized flourish at the end.

Allison W. Hall
Director
Security and Installations Directorate

Enclosures

1. References
2. Responsibilities
3. TAM System Access and Training
4. Obtaining Access to PeopleSoft Asset Management
5. Monitoring Asset Acquisitions
6. Receipt of Goods and Service
7. Asset Staging
8. Asset Placement into Service
9. Asset Management
10. Disposition of Assets
11. Accountability for Contractor-Acquired Property, Government-Furnished Property, and Property in Possession of Contractors

ENCLOSURE 2RESPONSIBILITIES

1. Director, Installation Operations Office (D/SIO).

a. Establishes accountability and custody processes for all property acquired, leased, or otherwise obtained throughout an asset's lifecycle, including Controlled Cryptographic Items (CCI) and Government Property in the Possession of Contractors (PIPC) from initial acquisition and receipt through accountability and custody until the need for accountability of the property ceases through authorized means, including disposition or through a completed evaluation and investigation for property loss, IAW Reference (a).

b. Establishes an APSR that ensures internal control measures and achieves effective and efficient operations, reliable financial reporting, and compliance with applicable laws and regulations IAW Reference (e f).

c. Implements property management policies, standards, and performance measures, and monitors and evaluates NGA-wide performance to achieve and sustain effective accountability, management, control, and accurate financial accounting of government property IAW with Reference (d e).

d. Establishes the corporate property administration function when property administration is assigned to Security and Installations (SI), and allocates resources to administer government property on NGA contracts using DoD contracting authority IAW Reference (d e). SIOP is assigned the property administration for all NGA contracts when government property is provided or acquired IAW Reference (h m).

e. Requires all personnel entrusted with government property to be properly trained to their level of functional responsibility including initial mandatory training and annual refresher training.

f. Coordinates with the Communication Security (COMSEC) Program Office to maintain a list of COMSEC primary and alternate custodians with their assigned CCIs in PS-AM.

g. Appoints, in writing, an APO.

2. Chief, Enterprise Property Management (C/SIOP).

a. Develops and provides standards, procedures, and guidance for the administration, execution, and implementation of the property administration function for all NGA property, plant, and equipment (PP&E); these standards, procedures, and guidance must meet mission requirements and provide effective oversight of government property in the possession of contractors IAW Reference (e f).

b. Designates or terminates, in writing, corporate PAs and PLCOs.

c. Considers experience, training, education, business acumen, judgment, character, and ethics in selecting qualified PAs and PLCOs. Minimum requirements include Defense Acquisition Workforce Improvement Act (DAWIA) certifications as follows:

(1) Senior Property Administrator – DAWIA Certified Industrial/Contract Property Management Level III.

(2) Property Administrator – DAWIA Certified Industrial/Contract Property Management Level II.

(3) Plant Clearance Case Officer – DAWIA Certified Industrial/Contract Property Management Level I.

d e. Ensures that assets are properly depreciated and that the accumulated depreciation is properly calculated to support quarterly and yearend financial reporting requirements IAW Reference (**i n**).

e f. Ensures that supporting documentation provided for capitalized assets includes evidence of value stated for the assets.

f g. Makes valuation adjustments in PS-AM for capital assets.

g h. Creates PP&E reports from PS-AM, as needed.

3. Chief, Installations Operations Office – East/West (C/SIOE/SIOW).

a. Designates secure storage spaces in all NGA-controlled facilities that are controlled and accessible only to authorized personnel for secure staging of equipment awaiting disposal or destruction.

b. Ensures that all personnel involved in E-Waste functions are properly trained and certified on disposal procedures and equipment.

c. Inventories and maintains receipt for all E-Waste transactions, including delivery and disposal requirements IAW References (**j o**) and (**p y**).

d. Processes disposal actions in PS-AM for all assets physically turned in through NGA Washington, NGA St. Louis, and NGA Arnold and other disposal actions as directed by the PAs and PLCOs.

e. Prepares and maintains destruction certificates for all IT equipment destroyed IAW Reference (**j o**).

f. Ensures that all property records supporting disposition of assets are maintained IAW Reference (j e).

4. Accountable Property Officer.

a. Establishes and maintains NGA's accountable property records, systems, and financial records relative to government property. This includes the requirement for maintaining a complete trail, suitable for audit, of all transactions and the ability to implement and adhere to associated internal controls.

b. Monitors changes to PS-AM for all required transactions as required (e.g., loan, etc.).

c. Assigns user access to PAM and AC in PS-AM upon receipt of NGA Form 4140-5, "NGA TAM User Access Appointment/Designation."

d. Oversees the identification and tracking of accountable property through the acquisition, storage, utilization, transfer, and disposal of that property, including hard drives extracted during the sanitization processes.

e. Manages the NGA barcode program to ensure that accountable property is uniquely identified and marked upon receipt.

f. Manages the Lost, Damaged, Destroyed (LDD) Property Program by initiating inquiries through appropriate channels when property loss has been reported; recommends actions to conduct inquiries or to improve processes as appropriate; assists in investigations, as required; and processes liability investigations through completion IAW References (a) and (l f).

g. Oversees the development of all physical inventory fiscal year plans to ensure that NGA's accountable property is inventoried as required IAW Reference (d e).

h. Certifies that property is properly assigned to a PAM and AC.

i. Oversees the stewardship transition when PAMs/ACs are reassigned to or depart from NGA.

5. Senior Property Administrator.

a. Develops policy and procedures for overseeing contract property management IAW Reference (d e).

b. Oversees and manages lifecycle processes for government-owned property used by contractors (e.g., government property in the possession of contractors).

6. Property Administrators (PA).

a. Perform property administration duties for all of NGA. Administer (review, assign, and manage) contracts and other procurement/non-procurement instruments IAW References (a) (b), and (h ~~m~~) or other property-related requirements/terms and conditions.

b. Ensure the contractors identify a Contractor Property Manager (CPM) to manage the Contractor Acquired Property (CAP) or PIPC acquired through their contract or to manage the Government Furnished Property (GFP) provided to the contract. In the event the CPM cannot obtain access to the NGANet and PS-AM, the program office will designate the PAM or other government employee from the program management office/requiring activity to manage the government assets in the possession of the contractor.

c. Ensure the contractor physically inventories all NGA GFP in its possession on an annual basis. Personnel who perform the physical inventory must not be the same individuals who maintain the property records or have custody of the property unless the contractor's operations are too small to do otherwise.

d. Ensure the contractor reports inventory results to Security and Installation, Installation Operations Office, Property Division at NGA/SIOP, Mail Stop N82-SIOP, 7500 GEOINT Drive, Springfield, VA 22150 to update PS-AM for each contract and subcontract that involves GFP.

e. Perform oversight of contractor property management systems, including review of contractor procedures.

f. Evaluate contractor responsibility and liability for property loss and either grant relief or recommend liability IAW Reference (I ~~f~~).

g. Assist in reviews of other contractor business systems (e.g., material management accounting system and contractor purchasing system reviews) when requested and authorized by the CO.

h. Participate in pre- and post-award contract reviews, as required.

i. Verify contractor personnel performing the receiving process and barcode all NGA accountable assets immediately upon receipt and acceptance. Obtain barcode labels, or a series of numbers for use, from SIOP.

j. Ensure contractors accurately identify, value, and record assets on the Asset Delivery Report (ADR) upon receipt, and submit the ADR to SIOP for upload to PS-AM.

k. Ensure contractors submit ADRs electronically via the PeopleSoft On-Line ADR Process or the SIOP TAM mailbox (TAM1@coe.ic.gov).

l. Ensure contractors submit supporting documentation to SIOP for the financial reporting of capital assets, such as purchase requests, delivery orders, invoices, packing lists, and DD Forms 250, "Material Inspection and Receiving Reports."

m. Ensure contractors identify a CPM for contractor property administration.

n. Ensure contractors submit annual inventory reports to SIOP for reconciliation, initiation of discrepancy actions, and updates to PS-AM.

o. Ensure contractor valuation changes in capital assets, such as impairment and improvements, are provided to SIOP and Financial Management Comptroller's Office (FMC) so that SIOP may properly adjust the asset value in PS-AM.

p. Ensure contractors identify LDD property in PS-AM and provide LDD reports to SIOP, or the CO, in a timely manner.

q. Evaluate contractors' LDD property reports and recommend contractor liability. If required, relieve the contractor from liability for the loss and advise the CO of the results.

r. Provide advice and assistance on property-related matters to the procuring CO during acquisition planning, contract formation, and contract administration.

7. Program Managers.

a. Consistent with the requirements of References (c) and (h m), PMs are responsible for identifying GFP to be provided to contractors in order to allow the CO to incorporate and identify the GFP at contract formation.

b. Follow the management and disposal procedures for all E-Waste in acquisitions for Automated Information Systems (AIS), including developing the Security Plan (SP) with the assistance of the Information Security Officer (ISO) IAW Reference (p y).

c. Develop an A2R lifecycle asset management plan for the useful life of all assets in the program; the plan should include acquisition, operations and maintenance, and disposition and disposal procedures.

d. Collect and maintain documentation to support property being acquired, such as contracts/Military Interdepartmental Purchase Requests (MIPR); vendor invoices; DD Form 250, "Material Inspection and Receiving Reports"; DD Form 1155, "Orders for Supplies and Services"; DD Form 1149, "Requisitions and Invoice/Shipping Documents"; Standard Form (SF) 1034, "Public Vouchers for Purchases and Services Other than Personal"; and shipping and receiving reports.

e. Identify and assign an adequate number of personnel to manage the property being acquired, such as PAMs and ACs.

f. Operate, maintain, and dispose of AIS IAW applicable security policies and practices, and ensure that approved procedures are in place for clearing, purging, declassifying, and releasing system memory, media, and output.

g. Assign a qualified Operation and Service (O&S) technician to perform information security sanitization procedures for their respective programs.

h. Ensure that assigned IS security personnel coordinate with the appropriate AC when AIS property is to be moved and sanitized. The information security technician certifies that the equipment is approved for movement or transfer on NGA Form 4151-12, "Request for Equipment Transfer," provided by the AC.

i. Ensure that assigned O&S information security technicians coordinate with the appropriate AC when AIS property is to be turned in. The security technician certifies on NGA Form 4151-12A, "Request for Equipment Turn-In," provided by the AC, that classified or sensitive unclassified components have been removed.

j. Ensure that all media is securely disposed of IAW Reference (n u).

k. Ensure that control procedures are established to document the extraction, sanitization, and destruction of hard drives from end items (assets) IAW Reference (p y).

l. Ensure that NGA Form 5215-26, "Certification of Hard Drive Disposition," is completed and affixed to sanitized equipment. The form is on the SI SharePoint websites: <https://web.intranet.nga.mil/org/SI/SitePages/Forms.aspx> (SBU) and https://www.intranet.nga.ic.gov/org/si/SitePages/NGA_forms.aspx (COE).

m. Ensure that NGA Form 5215-27A, "Approved for Release," labels are affixed on all AIS equipment being turned in that does not require the hard drive certification label. The form is on the SI SharePoint websites: <https://web.intranet.nga.mil/org/SI/SitePages/Forms.aspx> (SBU) and https://www.intranet.nga.ic.gov/org/si/SitePages/NGA_forms.aspx (COE).

n. Ensure that NGA Form 5215-27B, "Burn-In Detected Release Destroy," labels are affixed to all equipment with burn-in, phosphor-based display technology, such as cathode ray tubes, that need to be destroyed. The form is on the SI SharePoint websites: <https://web.intranet.nga.mil/org/SI/SitePages/Forms.aspx> (SBU) and https://www.intranet.nga.ic.gov/org/si/SitePages/NGA_forms.aspx (COE).

o. Ensure that excess AIS at contractor sites are approved for disposition through a federally certified recycler and that the contractor's transfer process is reviewed and certified. Required documentation includes a memorandum for the record certifying that the contractor's process for disposal is secure and complies with Reference (p y).

p. Maintain a Statement of Volatility (SOV) file for each asset on the NGA-approved IT hardware whitelist or other non-standard IT hardware approved for purchase.

q. Update the Information Assurance Manager (XACTA) database to reflect changes, such as new additions, transfers, and deletions, for all IT equipment transferred or decommissioned.

r. Ensure IUIDs are used to identify and track applicable major end items, configuration-controlled items, and government-furnished property to enhance life-cycle management of assets in systems acquisition and sustainment and to provide more accurate asset valuation and property accountability IAW Reference (f g).

8. Program Asset Managers.

a. Identify each accountable asset in their area of control with a barcode label, or other unique identifier, and properly record it in the TAM system.

b. Ensure that ACs are trained to effectively manage assets.

c. Review capital assets support documentation and properly record in the TAM system for financial reporting.

d. Resolve discrepancies with vendors or agents.

e. Ensure receipt and acceptance of assets are documented on the NGA Receiving Report or DD Form 250, "Material Inspection and Receiving Reports."

f. Ensure that all assets are accurately identified, valued, and recorded on an ADR and submitted to SIOP to be populated in PS-AM.

g. Ensure that barcodes are correctly applied to the designated accountable property. In instances in which the barcode cannot be attached to the asset, the PAM should ensure the asset is uniquely identified for tracking purposes, using mechanisms such as virtual barcodes or media access control address.

h. Fully cooperate with the Base Operations Services (BOS) contractor and SIOE/SIOW inventory representatives as they conduct annual or triennial inventories of their account and the results are properly annotated in PS-AM.

i. Ensure ACs are trained on how to process accountable property transfers, relocations, additions, deletions, and losses utilizing PS-AM.

j. Promptly report instances of LDDs IAW Reference (l r).

k. Conduct required searches prior to reporting or initiating LDD actions in PS-AM, such as a records search, a check of adjoining space, and a query of the Enterprise

Remedy Action Request System (Remedy) Database to determine if missing items are in use at a different location.

l. Promptly report any personal information technology device (PITD) loss, or suspected loss, to the PITD store representatives, and document the loss in the Remedy to enable disablement and disconnect actions.

m. Document temporary equipment transfers or equipment on loan using NGA Form 4140-6, "Temporary Asset Custodian Receipt."

n. Conduct a joint inventory with the incoming AC prior to reassignment or departure from NGA.

o. Designate authority to an assistant(s) to receive, transfer, or turn in equipment in the event that someone is required to act on behalf of the PAM/AC.

9. ACs.

a. Ensure assets are properly barcoded immediately upon receipt and acceptance.

b. Verify that asset data attributes indicated on the asset delivery report are accurate prior to submission to the PAM/COR.

c. Provide shipping and other related documents to the PAM/COR to support receipt and acceptance of program assets and financial reporting of capital assets for assets directly received.

d. Fully cooperate with the BOS contractor and SIOE/SIOW inventory representatives as they conduct annual or triennial inventories of their account and the results are properly annotated in PS-AM.

e. Ensure all accountable property transfers, relocations, additions, deletions, and losses are processed and updated in PS-AM and the Configuration Management Data Base (CMDB), as applicable.

10. PLCOSs.

a. Instruct the contractor on the preparation of SF 1428, "Inventory Disposal Schedules."

b. Make pre-inventory scrap determinations.

c. Report excess property identified by the contractor to the CO and PA through PS-AM.

d. Determine the acceptability of SF-1428, "Inventory Disposal Schedules."

e. Prepare and maintain plant clearance cases and disposal documents IAW Reference (j ~~o~~).

f. Coordinate screening and provide information to screeners in the selection of assets, such as quantity, condition, description, and special processing requirements of property listed on inventory schedules.

g. Coordinate the timely shipment of property selected for transfer and donation.

h. Determine the appropriate method of disposal for items not selected for Federal agency use or donation and ensure final plant clearance is accomplished.

i. Monitor ongoing plant clearance actions to ensure delays are minimized and, when necessary, work with the contractor and property administrator to implement improvements.

~~j~~ ~~k~~. Require the contractor to properly sanitize excess IT property and obtain certification by the ISO/PM, or designated representative, prior to disposition.

~~k~~ ~~l~~. Monitor the disposal of excess property to ensure its disposal is IAW the instructions received from the CO or PA.

~~l~~ ~~m~~. Support the PA during the disposition compliance analysis portion of the contractor's property control procedures.

~~m~~ ~~n~~. Report all disposal deficiencies to the PA.

~~n~~ ~~o~~. Account for all government property reported for disposal by the contractor and prepare prescribed plant clearance reports.

~~o~~ ~~p~~. Advise and assist the contractor, CO, inventory manager, Federal agencies, and eligible donors in actions related to the proper and timely disposal of contractor inventory.

11. Director, Office of Contract Services (D/OCS).

a. Provides the PS-AM team with a copy of all new NGA contracts that include government furnished property, including contracts through the Planning Tool for Procurement Request Information System (PRISM), automated notification of accountable property acquired by Government Purchase Card (GPC) purchases, and NGA acquisitions executed by other entities.

b. Applies the NGA ADR to all contract vehicles when government property is acquired. The ADR requires the vendor/contractor to report assets for which the government has title.

c. Ensures that vendors/contractors provide ADRs to SIOP prior to delivery, using email or via a web portal, or as directed in the contract.

d. Identifies the designated COR or other government official to be the PAM. The COR and PAM, together with the property administrators and contractor personnel, will ensure the property acquired by or provided to the contractor is identified and maintained throughout its lifecycle, per FAR requirements and Reference (h m).

e. Ensures that supporting documentation is submitted for property delivered where the final government unit cost is \$250,000 or more. The supporting documentation is the signed receiving report and associated invoice submitted to the CO or designated representative, without deviation, on which the government was billed as required by FAR 52.232-25, "Prompt Payment Clause" (Reference (a)).

f. Receives advice and assistance from PAs on any property-related contract actions specific to contracts with government property.

g. Ensures that purchase card (PCARD) holders obtain approval from the IT Infrastructure Services Office prior to purchase of non-standard AIS items. Instruct PCARD holders to select the "Accountable Equipment" checkbox in the purchase card database and notify their organization's PAM.

h. Ensures that PCARD holders identify an AC whenever accountable property is being purchased.

i. Ensures that contractors coordinate with the CO on contract actions to procure, add, transfer, modify, or remove property in the contractor's possession.

12. CO.

a. Ensures that the contractor identifies the CPM to the designated PA and COR in order to manage the CAP or PIPC acquired through their contract, or to manage the GFP provided to the contract.

b. Ensures that the contractor identifies an AC to the PA and COR in order to manage PIPC in PS-AM.

13. COR.

a. Coordinates with the PA, review capital asset support documentation and submit to the TAM Support Team for financial reporting.

b. Coordinates with the PA, will ensure contract and financial data on the Asset Delivery Report is correct and submitted to the TAM Support Team for processing.

c. Verifies receipt and acceptance of assets are documented on the DD Form 250, "Material Inspection and Receiving Reports", and that all bar codes and serial numbers for each asset match the record in PS-AM.

d. Coordinates with the PA, will verify all assets, i.e., CAP, PIPC, and GFP are accurately identified, valued, and recorded in PS-AM.

14. Director, Chief Information Officer and Information Technology (IT) Services (D/CIO-T).

a. Manages cost, schedule, and performance of all NGA IT programs and requirements, and provides centralized asset management for all NGA IT assets via Remedy.

b. Approves and controls the software and IT hardware acquired by NGA.

c. Manages the approved software and IT hardware list to ensure all testing and security requirements are met. Validates requisitions for software and hardware and oversees compliance for the acquisition process.

d. Oversees IT hardware asset items delivered to NGA for customers, ensuring compliance with property accountability guidance, hardware configuration and delivery, and installation at the customer's worksite.

e. Enforces the established process for managing IT devices in theater and regional locations, and coordinates SI, FM, Expeditionary Operations Office, IT security, and IT configuration asset management requirements. This process must include procedures for sanitizing assets at the end of their lifecycle

f. Uses electronically discovered data for record validation, when possible, that provides the means to evaluate the quality of the inventory data and flags discrepancies in PS-AM.

g. Accounts for all mobile IT devices acquired. The accountability procedures must support asset Security Plan Identification Number (SPID), Federal Information Security Management Act (FISMA) reporting, Enterprise Service Center (ESC) Cyber Security Device Authentication, and IT CMDB monitoring and physical inventory requirements.

h. Documents and accounts for, by serial number, all removable media extracted from end items during the sanitization process and turned in for disposal or destruction; maintains a chain of custody through destruction IAW Reference (p y).

i. Collaborates with SI to establish an electronic equipment reuse process and implement an integrated change process between Remedy and PS-AM for the repurposing of NGA's serviceable excess IT equipment.

j. Submits sanitization requests for excess IT property through a Remedy Change Request (CRQ) after determination of excess has been made by the respective Program Office.

k. Exercises due care in the sanitization of excess IT property to allow for reuse, with minimum restoration, when transferred to a gaining activity or the Defense Logistics Agency (DLA).

l. Develops and utilizes electronic interfaces to federate the CMDB with PS-AM on all IT hardware change information, such as additions, location changes, deletions, and equipment transfers.

m. Maintains awareness of Interconnected Security Agreements and/or Co-Location Agreements and relative documentation for non-NGA assets connected to the NGA IS infrastructure and ensures they are properly identified and assigned in PS-AM and the CMDB.

n. Ensures that IT systems SPIDs are updated to reflect all IT equipment changes, such as additions, location changes, deletions, and equipment transfers.

o. Provides procedures for developing, implementing, maintaining, and monitoring IS security controls for IT asset inventory, sanitization, and disposal as delineated in the NGA Information Assurance Requirements Catalog (IARC) (i.e., AC-7(2), CM-8, CM-8(1) through CM-8(9), CP-9(3), MP-6, MP-6(1) through MP-6(3), PE-20, and PM-5, IAW Reference (m s)).

p. Completes records management retention requirements per decommissioning letters prior to initiating any sanitization efforts.

q. Provides training and guidance for all personnel involved in the sanitization and disposal of E-Waste.

15. Chief, Financial Management, Property, Plant, and Equipment (FMCR).

a. Establishes an accounting structure to categorize procurement activity, IAW Reference (i n), to facilitate support for base unit valuation of PP&E.

b. Reconciles capitalized property balances recorded in PS-AM to the capitalized property balances recorded in the GEOINT-Financials (GEO-F) system.

16. Chief, COMSEC Program Office.

a. Ensures that all CCI property is recorded in the TAM system upon receipt including CCI acquired by contractors for NGA or on behalf of NGA.

b. Ensures that the CCI is used and maintained per the applicable Committee on National Security Systems Instructions. (Reference (O ~~W~~))

c. Provides oversight of COMSEC operations, policies, procedures, accounting, resource management, material acquisition, and training throughout the Agency and serves as NGA's Central CCI Authority.

ENCLOSURE 3**TAM SYSTEM ACCESS AND TRAINING**

1. The TAM system, provided on the NGANet, provides an automated capability to support all functions associated with property accountability and equipment management. Access to the NGANet can be obtained by submitting a Remedy ticket to open an account or by calling the NGA Help Desk at 800-455-0899 (unsecure) or 578-5555 (secure).
2. Access to the TAM system requires the completion of NGA Form 4140-5, "NGA TAM User Access Appointment/Designation." The SIOP PS-AM administrator assigns user roles after receipt of a properly completed form. Users are defined by their assigned roles in the TAM A2R process. To maintain credibility of the system, users can only be assigned to the roles within their areas of responsibility.
3. Users must complete specific training tailored to their roles in the TAM A2R process. Training for each role is scheduled and provided by SIOP. User roles and responsibilities are defined by the user's specific function, such as PAM, SIOP system support, AC, inventory specialist, or financial analyst.

ENCLOSURE 4

OBTAINING ACCESS TO PEOPLESOFT ASSET MANAGEMENT

1. NGA TAM User Appointment Form. NGA Form 4140.5, "NGA TAM User Access Appointment/Designation," must be completed for each user to gain access to PS-AM.

a. NGA Form 4140.5 can be obtained from NGA's form database at the following link on the SI SharePoint websites:

<https://web.intranet.nga.mil/org/SI/SitePages/Forms.aspx> (SBU) and
https://www.intranet.nga.ic.gov/org/si/SitePages/NGA_forms.aspx (COE).

b. To maintain a separation of duties to the greatest extent possible, and to minimize risk of loss to the government, ACs or PAMs performing the AC roles cannot be appointed as PCARD holders.

c. Duties, such as transactions for capitalization, additions, and turn-ins, must be segregated to maintain the integrity of PS-AM. When authorizing access to the system, the TAM Property Program Officer reviews the requirements and ensures that the same individual is not given access to adding and disposing of records. Semi-annual reports are run to ensure compliance with the segregation of duty requirements.

d. Forward all NGA Form 4140.5 requests for access to PS-AM to the APO/SIOP system administrator for approval and processing at TAM1@coe.ic.gov.

2. Access to PS-AM. Upon successful completion of the mandatory training, the SIOP PS-AM administrator enters the training date and obtains the APO approval in Section E of Form 4140.5. An email is forwarded to the PeopleSoft Security Team to designate the individual as a privileged user with access to the functions as defined by their roles in PS-AM.

ENCLOSURE 5**MONITORING ASSET ACQUISITIONS**

1. The NGA asset due-in process begins when an asset due-in record is created within PS-AM for CAF-compliant contracts, or when a due-in record is manually added to PS-AM. The process ends when an asset record is created in PS-AM.

a. The PS-AM acquisition team is responsible for processing all due-in transactions. This role is limited to the PS-AM monitor acquisition team position. Access to system functions to perform specific duties are controlled by role-based system security within PS-AM. Access to PS-AM, and authorization to perform these functions, is approved by the TAM Support Team.

b. PS-AM automatically creates due-in records for acquisition CAF-compliant contracts/MIPRs with capital accountable property only. The PS-AM monitor acquisition team manually creates due-in records for accountable property purchased by contracts, MIPRs, GPC, or miscellaneous obligation/reimbursement documents.

2. SIOP manages the internal controls, via the due-in record report, to ensure all due-in records are accurate and completed within two business days from initial creation of the record in PS-AM. If there is missing or incomplete data, SIOP reviews the remarks section of the due-in record for a justification and/or explanation of the discrepancy. The report identifies lag times, incomplete due-in records, process discrepancies, or provides reasonable assurance that all due-in records were completed within the required timeframe. SIOP identifies the necessary adjustments to either eliminate or minimize future process discrepancies and validates that all records that should have been recorded as a due-in were actually recorded.

ENCLOSURE 6

RECEIPT OF GOODS AND SERVICES

1. Asset receiving is the process of formally accepting goods and services and establishing accountability in PS-AM for accountable assets.

a. The PAM and/or COR ensure all property acquired by their Program Office is promptly entered into PS-AM within two business days of receipt and acceptance, regardless of delivery location or assignment of asset custodian.

b. The PAM ensures the delivery location is identified on purchase orders (PO) or other applicable documents. All shipments must be clearly marked with a proper address. The address must include office code and title, mail stop code, agency name, street address, city, state, and zip code, per the United States Postal Service.

c. The person accepting the shipment must notify the PAM/AC, or the designated POC identified on the shipment, within two business days of receipt. All shipments received must be logged and tracked upon delivery. Personnel receiving a shipment sign to acknowledge receipt of goods.

2. When property is delivered to any NGA location, the AC inspects the assets and verifies against the contract terms and conditions, criteria, and procurement documents to determine non-conformity or discrepancies. Contracts/shipping documents include, but are not limited to, the following technical or quality specifications:

a. Contract

b. Bill of Materiel (BOM)

c. PO

d. Vendor Packing List

e. Acceptance Checklist

3. If there is a discrepancy with the delivery, the AC informs the PAM of the discrepancy and the asset manager coordinates with the appropriate original equipment manufacturer, or shipper, to eliminate the discrepancy. Damage and/or non-conformance for technical/quality issues are generally the primary reasons for receipt/acceptance issues. When the received assets do not conform to the contractual requirements, communication with the vendor regarding quantity, quality, and technical non-conformance attributes is required to satisfactorily resolve the transaction issues. Discrepancies are logged and maintained by asset managers and coordinated with OCS.

4. To maintain a comprehensive audit trail within the receiving process, the following information should be captured within PS-AM:

a. Date asset arrived at the NGA receiving dock (tailgate date).

b. Receiver's signature and date. The tailgate date and receiver's signature date should be the same. It is preferable to annotate that the tailgate date and the receivers signature date match on the receiving report (DD Form 250, "Material Inspection and Receiving Report," and/or the BOM). Depending on the contract structure, an invoice may or may not accompany the shipment. The PAM should establish a three-way match procedure to compare the PO, receiving report, and invoice.

5. For A2R, the most important aspect is providing assurance the received/acceptance items are processed in PS-AM in a timely manner. PAMs play a vital role in validating valuation data. A communication loop must exist between the PAM, who validates with the CO on the receiving information, and those processing payments.

6. When the value of assets identified on the receiving report differs from the PO, program office asset management personnel must notify FMFC personnel of the discrepancy within two business days. Overall, PAMs should validate that the following information on the receiving report matches the PO:

a. Item nomenclature

b. Quantity

c. Price

d. "Ship to" routing identifier

e. Acceptance status (Free On Board (FOB)-Origin or Destination)

7. Failure to match any of these items between the PO and receiving report should suspend the receiving process and initiate the creation of a discrepancy report. PAMs have internal procedures for AC to reference the data fields required for validation on each type of receiving report.

8. For FOB-destination receiving processes only, a comprehensive list of personnel approved as signature authorities on receiving reports should be created/maintained by the PAMs and all identified personnel should have Delegation Letters of Authority. Signature by an approved signature authority with a Delegation Letter on file constitutes management review of the acceptance.

9. Acceptance occurs when the authorizing official countersigns and dates DD Form 250, "Material Inspection and Receiving Report." PAMs must validate all data requirements and subsequently provide the authorizing official a validated receiving

package for signature only. This maintains a segregation of duties within the process. However, signature authorities (PAMs) can perform these validations but should not have data entry rights to process downstream PS-AM record entries.

10. On the last day of the month, the PS-AM receiving office generates the monthly asset receiving report to identify asset records missing mandatory information (such as serial numbers). Specific PAMs are notified of missing asset data and requested to update the asset record within two business days. The PAM must update the deficient record with the appropriate information.

11. Capital asset records not updated with the appropriate information by the end of the fiscal quarter are reported to the SIOP monitor acquisition team lead so financial reporting for the quarter is not compromised. The PS-AM receiving office runs reports from the system to identify data quality issues and resolve accordingly.

APPENDIX 1 TO ENCLOSURE 6PRODUCTION, DISTRIBUTION, CONTROL, AND BARCODE USAGE

1. NGA's accountable property records include both financial accounting and asset management requirements, established and maintained for each accountable property record in PS-AM; the accountable property threshold is stated in Enclosure 9, paragraph 4, of this Manual. NGA uses the barcode as the primary method for identifying its accountable assets, and SIOP is responsible for the production, distribution, control, and usage of both accountable and non-accountable barcodes.

a. The use of barcodes provides consistent identification for managing and controlling property. SIOP produces, distributes, and monitors the usage of the barcode labels. The barcode labels are produced and provided to other PAMs, ACs, and CPMs as required.

b. A series of consecutive numbers may also be provided to a vendor providing equipment to NGA. However, the vendor will be responsible for producing the actual barcode labels. No more than 2,000 labels will be issued or assigned to an NGA customer or commercial vendor at any one time.

2. COs and PAMs ensure that the NGA ADR is applied to all NGA contract vehicles when tangible, durable government property is acquired and that a NGA barcode label is affixed to all accountable property that meets the criteria stated in Reference (e f) and this Manual for accountable property.

3. PAMs/ACs submit requests for barcode labels or barcode series by electronic means at least two weeks in advance of the need. These requests must be submitted on NGANet to TAM1@coe.ic.gov.

4. When it is discovered that accountable property provided to contractors was not barcoded, the COs must barcode that property and report to SIOP within five business days of the discovery for upload to PS-AM.

5. When affixing barcode labels to property, special care must be taken to ensure the correct barcode label is affixed. Barcodes are functionally limited to eight characters. The current authorized formats for barcodes are as follows:

- a. Accountable property barcodes are labeled with "APXXXXXX:"
- b. Non-accountable property barcodes are labeled with "NAXXXXXX:"
- c. Internal use software (IUS) barcodes are labeled with "NGASXXXX:"
- d. IT system barcodes are labeled with "NGAXXXXT:"

6. Barcode labels are affixed to the front, upper right corner of the property. If it is not possible to affix the barcode label as described, then every measure is taken to affix the barcode label in such a manner as to facilitate the scanning and inventory process. Barcodes will not, under any circumstances, be affixed on the bottom of property or in a location that encourages wear, tear, or destruction of the label.

7. Barcodes can be issued for new assets in the format explained above, reprinted to replace worn or missing barcodes, reprinted and logged to mirror the correct barcodes of assets with barcodes not matching the format discussed above, or corrected to match the barcode of the asset in PS-AM; as explained in the below processes.

a. IUS barcodes. IUS is a non-tangible capitalized asset that requires the assignment of a barcode but lacks the physical characteristics necessary to properly affix a barcode to the asset. For this reason, SIOP coordinates barcode assignments with FMC for IUS once the valuation is complete and the acquisition cost is determined. The assigned barcode is added to PS-AM at the same time the IUS record is created via an ADR.

b. IT system barcodes. IT systems are composed of multiple pieces and can be a combination of tangible and intangible assets assembled in such a way as to make it difficult to affix a barcode to the IT system. For this reason, SIOP coordinates barcode assignments with FM for IT systems once the valuation is complete and the acquisition cost has been determined. The assigned barcode is added to PS-AM at the same time the IT system is created via an ADR.

c. Barcode reprint. If a PAM, COR, or AC notices a barcode is worn, torn, or damaged to the point that it cannot be easily read, an email request is sent to TAM1@coe.ic.gov, subject line: "Barcode Reprint." The same information as a new barcode request will be provided.

d. Barcode corrections. There may be situations when a barcode was correctly processed but is not accurately reflected on the asset itself or in PS-AM. In these situations, the barcode listed in PS-AM is considered to be the correct barcode. A barcode is produced and sent to the appropriate AC. After ensuring the asset barcode matches what is in PS-AM, as opposed to correcting PS-AM to reflect the barcode on the asset, the AC ensures that there are no duplicate barcodes resulting from this type of situation.

e. Legacy barcodes. Legacy barcodes are barcodes that are not in the same format as barcodes currently being issued by TAM Support. These barcodes are still to be used until the asset bearing a legacy barcode is disposed of or no longer the property of NGA. These barcodes are not changed unless there is a compelling reason to do so (i.e., there is a duplicate barcode and it must be changed in order to accurately enter the asset into PS-AM). When a request is received regarding a reprint for a legacy barcode, TAM Support facilitates this request by producing scannable barcodes bearing the same identifying numbers and letters as the legacy barcodes. Reprinted barcodes are logged in the same manner as new barcodes.

APPENDIX 2 TO ENCLOSURE 6CREATING THE ASSET DELIVERY REPORT

1. The ADR is required to be completed on all newly acquired assets. The ADR creates asset property records in PS-AM and IT property records in Remedy. Asset data attributes consist of contract data, stewardship, and location information. When the ADR is prepared and submitted to the monitor acquisition team to create the asset records, the assets are linked to a requirement and a pre-existing due-in record, if applicable, and assigned to the appropriate AC in PS-AM. Completing and submitting an ADR is restricted to the PAM/AC COR and real property program asset managers for execution. SIOF maintains a list of the personnel authorized to submit ADRs for processing. Note: This process analysis does not address the receiving function in its entirety; it only addresses the ADR and the process for populating and submitting the ADR for processing. PAMs/CORs ensure that:

a. ACs are appointed in writing to manage and account for accountable property in PS-AM on NGA Form 4140-5, "NGA TAM User Access Appointment/Designation," which is used to identify personnel requiring access to PS-AM and training to perform the required responsibilities. PMs and CORs may also be appointed as ACs.

b. All newly acquired accountable property for the AC's Program Office is promptly entered into PS-AM within two days of receipt and acceptance, regardless of delivery location or property designation (government property and or contractor-acquired property).

2. The PAM works closely with the monitor acquisition team to ensure a project requirement number is created in PS-AM under "My Programs" prior to submitting the ADR for processing. Requirements are identified in this section by one of three separate methods:

a. Change Requirement (CR). Parent and/or child established during the Infrastructure Service Provider Requirements Analysis Board (IRAB) process.

b. General Requirement. Used when the procurement of assets is not associated with a CR (e.g., GPC, Non-IT Assets, assets procured by a Project Management Office (PMO)) directly through Contracting outside of the IRAB process.

c. Incremental Funding. Used when funds are added incrementally to a contract baseline to procure assets for special projects and are not associated with a CR.

3. The PAMs and CORs use the contract data, PO, BOM, and or contract specification documents to ensure the ADR is populated with the required information. At a minimum, the following information must be populated on the ADR to create an asset record:

- a. Contract Number
- b. Contract Line Item Number/Subline Item Numbers
- c. Property Type/Sub-Type
- d. NGA Barcode
- e. Manufacturer
- f. Model Number
- g. Serial Number
- h. Government Unit Cost
- i. Acquisition Date
- j. Location
- k. Asset Custodian Employee ID

4. For CAF-compliant contracts, the PAM validates the ADR contract data against the requirement and due-in record prior to submitting the ADR for processing. The contract number, modification number or delivery order number, employee ID number, Contract Line Item Number (CLIN), vendor, and line of accounting must match the due-in record. For non-CAF-compliant contracts, the PAM verifies the ADR is accurate to ensure the information is IAW the contract and technical specifications.

5. If an asset was acquired via a MIPR, the document number contained in Block 5 of the DD Form 448, "Military Interdepartmental Purchase Request," is used to populate the contract field. All other information populated on the ADR is identified on the associated procurement documents, such as purchase order, BOM, and the specification documents.

6. If an asset is acquired via a mission operations requirements document, use the document number on the Air Force (AF) Form 406, "Miscellaneous Obligation/Reimbursement Document," to populate the contract number field. All other information populated on the ADR is identified on the associated procurement documents such as the PO, BOM, and the specification documents.

7. If an asset was acquired via the GPC, the document number on the AF Form 4009, "Government Purchase Card Fund Cite Authorization," is used to populate the contract number and applicable line of accounting associated with the AF Form 4009 to populate the associated funding fields on the ADR. The number 0001 should be entered in the

CLIN number field. All other information populated on the ADR should be identified on the associated procurement documents, such as the PO, BOM, and the specification documents.

8. The monitor acquisition team returns the ADR to the PAM if the report does not have the required minimum fields to create the asset record. The ADR must be resubmitted within two business days for processing.

9. After the ADR is populated with the required data, the PAM forwards to the monitor acquisition team for processing. Routine reports for new equipment additions are provided to Service Performance Office (TOP) through the integrated PS-AM and Enterprise Configuration Management Database processes.

10. A copy of the PO/invoice must be submitted when there is a capital property asset identified on the ADR. The SIOP monitor acquisition team contacts the PAM immediately to obtain a copy of the PO/invoice if the supporting material was not submitted with the ADR.

11. The SIOP monitor acquisition team processes all ADRs with minimum data attributes. However, the PAM must submit missing asset data within 10 days to complete the record. An automatic PS-AM generated e-mail notice will be sent to the AC via e-mail when the ADR is processed and the asset record has been created in PS-AM.

12. Data Quality Indicators and Program Performance Measures: The SIOP monitor acquisition team:

- a. Reviews each ADR submitted and returns incomplete ADRs to the respective managers for corrections or additional information.

- b. Follows up with PAMs to ensure supporting documentation is received for capital assets.

- c. Provides delinquent reports to senior managers and supervisors on a monthly basis on ADRs/ADR corrections or supporting documentation that is 30 days past due.

ENCLOSURE 7ASSET STAGING

1. PAMs address asset staging in their acquisition plan, including scheduling storage space, maintenance of supporting records, rendition of reports, planning, stock positioning, monitoring product age, condition code, security considerations, and availability of space. Upon receipt of assets through new acquisitions or transfers, the assets are staged to coordinate configuration and to determine the asset custodian and final location. The staging process allows the PAM to properly identify and prepare assets for shipment and to control the deployment of the assets.

2. Storage involves activities that take place when an asset is not immediately placed into operational use. The PAM/AC:

- a. Designates a secure temporary holding location for the asset while in an inactive status.

- b. Ensures that information associated with the asset is correct and complete, such as barcode, manufacturer, model number, or serial number, and available for entry into PS-AM.

3. Staging involves activities to prepare items for shipment to the new location. The PAM/AC:

- a. Determines the new location and the intended AC that will assume responsibility for the asset.

- b. Ensures the assets are properly packaged to be shipped and coordinates the shipment to the consignee.

- c. Ensures that the consignee confirms receipt for the assets upon delivery.

- d. Provides receipt documentation to SIOP to update PS-AM.

ENCLOSURE 8**ASSET PLACEMENT INTO SERVICE**

1. Asset placement involves all activities required to make PP&E that has been accepted for use, for delivery to the government, or for release from inventory fully operational. This process applies to both newly acquired or improved PP&E.
2. Activation includes all activities associated with the change of an asset's status from inactive to active. It encompasses the steps required to update the appropriate documentation with regard to the potential corresponding change, such as AC, location, or condition.
3. SIOP processes the update in PS-AM upon confirmation that the asset has reached the intended destination for use and has become operational under the supervision of the new AC. SIOP also advises FMC on all transactions that involve capitalized assets.
4. SIOP ensures that the proper depreciation is applied to all capital assets placed into service and that the accumulated depreciation is properly calculated to support quarterly and yearend financial reporting requirements.

ENCLOSURE 9ASSET MANAGEMENT

1. PS-AM is the primary accountability system of record for NGA. It allows users to maintain and report information and activities related to PP&E, including facilities, from both the fiscal and physical accountability aspects. Information captured and tracked includes ownership, security controls, custodial control, inventory status, physical location, condition, and activity status. ACs are required to update PS-AM to reflect any changes resulting from equipment moves, transfers, and capital asset cost adjustments. Assets are also required to be inventoried on a routine basis and documented accordingly.

2. IT hardware management is the responsibility of individual PMOs and PMs but is physically accomplished via contractor ACs and government PAMs appointed by the PMOs and PMs. Several offices that support and facilitate this control process are described below:

a. The IT Asset Management Services Branch (TOPAS) maintains and improves control of the IT operational baseline through implementation and integration of improved IT asset management methods.

b. Open IT Solutions (TII) is usually the information system owner and ensures the ownership name and related POC information is included on each contract that involves government property, such as PAM, AC, CPM, or COR. OCS also mandates contractors to acquire all PITDs used for NGA business through the PITD store.

c. TII ensures that the IT Secure Operations Group (TO), IT Services Division (TOCS) establishes a single process for the acquisition, distribution, and accountability of all unclassified and classified IT mobile devices, such as Portable Electronic Devices (PED) (laptops, tablets, or notebook computers) and Designated Approving Authority (DAA)-approved Universal Serial Bus (USB) flash memory drives and smart phones. This includes contractor-acquired or Government-furnished PITDs to contractors. The procedures support asset SPID, FISMA reporting, ESC, cyber security device authentication, IT CM, and PS-AM, IAW Reference (k p).

d. The information system owner or PM ensures that a SPID is recorded in the XACTA database for all PITDs recorded in PS-AM.

e. TOPAS establishes an electronic equipment reuse process, integrated with a Remedy change request process and PS-AM process, for the repurposing of NGA's serviceable excess IT equipment. The program offices involved establish storage space to hold items for future use or to stage items for transfer to other activities.

f. The Government PMs ensure that all excess or unserviceable IT equipment is properly sanitized prior to disposal. Disposal instructions are provided in Enclosure 10 of this Manual.

3. The SIOP Support Team monitors these activities to ensure asset records are updated in a timely manner. Specific functions for managing assets include the following:

a. Moving an asset. A move is described as the relocation of an asset when the custody of the asset does not change. It consists of the physical movement of either IT equipment or non-IT equipment. Some moves require actions outside the scope of PS-AM, which must be coordinated with the supporting activity or offices.

b. Asset transfer. An asset transfer includes the transfer of custodial responsibility for the asset and may also require the asset to be moved in the process. ACs are responsible for initiating and coordinating the activities when equipment needs to be moved or transferred. Asset transfers should not be confused with asset moves and must be documented.

c. Accounting for property on loan or lease. PAMs/ACs are responsible for establishing a Memorandum of Agreement/Memorandum of Understanding with the participating party to account for and manage the property. The property is recorded in PS-AM and assigned to the responsible office AC.

d. Documenting inventories. An inventory includes the verification of property existence, accountable property record completion, location, and quantity. The process may also involve verifying additional information, performing reconciliations, and modifying the accountable property records. There are several distinct types of inventories, including annual inventories, change of custody inventories, and ~~semi-~~ annual sensitive item inventories IAW Reference (d).

e. Updating capital asset records. Capital asset records are updated when a valuation change occurs. These functions are controlled by role-based system security within the PS-AM application. Access and authorization to perform these functions must be approved by the APO. SIOP ensures that the records are updated and all changes are reported to FMC.

4. Accountable Property Records and Supporting Documentation. SIOP is the organization of record for the PS-AM formal accountable property records. SIOP also maintains the APO's records for financial liability investigations of lost, damaged, or destroyed property. SIOP ensures that the NGA information lifecycle management program is properly implemented and the Agency's accountable property records are segregated from non-records and personal papers IAW Reference (j e).

a. Accountable property. Property that meets accountability requirements and is recorded in the APSR. Accountable property includes:

- (1) Property having a unit cost of \$5,000 or more.

(2) Internal use software valued at \$250,000 or more and with estimated useful life of two years or more.

(3) Sensitive, classified, and historical property, regardless of cost. AIS, such as personal computer workstations, PITDs, laptops, printers, tablets, notebook computers, servers, external hard drives, flash memory drives, or smart phones are classified at the highest level of information processed and retained by the system. Minimum classification for AIS is sensitive but unclassified.

(4) Property provided to third parties (such as Federal Agencies, State, or local governments, and foreign governments) regardless of cost.

b. Non-accountable property. This is a subcategory of personal property items that cost less than the thresholds specified above in paragraph 4.a and do not contain non-volatile memory administratively controlled by NGA organizations, office managers, and supervisors. This category of property is typically not recorded in accountable property records. Examples include furniture; office equipment; and certain types of durable operating materials and supplies, including hazardous, seized, or confiscated materials; and scrap property. Organization managers and supervisors determine the controls needed for this property to ensure proper use, control, and disposition. Non-accountable barcodes may be affixed to non-accountable property or marked as government property to the maximum extent practicable and is disposed of through local site disposal teams.

APPENDIX 1 TO ENCLOSURE 9IT HARDWARE MANAGEMENT

1. TOP coordinates on all acquisitions for IT equipment, regardless of whether TOP is accountable. The TOPAS ensures compliance with property accountability guidance; hardware configuration, if required; delivery and installation at the customer's worksite; sanitization; and disposition at the end of the assets lifecycle.

a. TII ensures that the ownership name and POC information is included on each contract that involves government property, such as PAM, AC, CPM, or COR. OCS also mandates contractors to acquire all PITDs used for NGA business through the PITD store.

b. TII ensures the TOCS establishes a single process for the acquisition, distribution, and accountability of all unclassified and classified IT mobile devices, such as PEDs (laptops, tablets, notebook computers) and DAA-approved USB flash memory drives and smart phones. This includes contractor-acquired or Government-furnished PITDs to contractors. The procedures support asset SPID, FISMA reporting, ESC, cyber security device authentication, IT CM, and PS-AM, IAW Reference (k p).

c. To achieve PITD accountability in the XACTA system, the IS owner or PM ensures a SPID is recorded in the XACTA database for all PITDs recorded in PS-AM.

d. Program Offices involved will establish an electronic equipment reuse process, integrated Remedy change request process, and PS-AM process, for the repurposing of NGA's serviceable excess IT equipment. TOCS establishes storage space to hold items for future use or to stage items for transfer to other activities.

e. TOCS ensures that all excess or unserviceable IT equipment is properly sanitized prior to disposal. Disposal instructions are provided in Enclosure 10 of this Manual.

APPENDIX 2 TO ENCLOSURE 9DOCUMENTING MOVES, TRANSFERS, AND LOANS

1. Moving an asset. An asset move consists of the physical relocation of an asset; a physical move does not always change the custodial responsibility for the asset. The AC is responsible for coordinating all activities regarding the move, such as requesting ISO/PM, SIOE, or SLOW support in updating the asset record in PS-AM to reflect the change in location upon completion of the move. Moves include non-IT internal or external and IT internal or external.
2. Transferring an asset. Using separate and distinct lateral transfer transactions will help fulfill property accountability requirements and financial reporting, IAW Reference (d e). The ability to complete an asset transfer depends on one's user role in PS-AM. If there are asset components, then all components are transferred with the asset. If the asset is a capital asset, then all source information and associated financial supporting documentation is provided with the equipment. There are several types of equipment transfers: internal non-IT or IT, transfer into or out of NGA, transfer between contracts, and temporary transfers. The specific type of transfer determines the documentation required (e.g., all transfers that involve AIS property must be coordinated through an Information Systems Security Officer (ISSO)).
3. Shipping property from NGA facilities. The NGA Washington, NGA St. Louis, and NGA Arnold mail room, shipping and receiving office, or freight delivery office ensures that the required documentation is completed and on hand prior to shipping equipment from one site to another or out of NGA. Appropriate offices maintain the applicable forms IAW Reference (j e).
4. Receiving property from non-NGA facilities. The NGA Washington, NGA St. Louis, and NGA Arnold mail room, shipping and receiving office, or freight delivery office ensures that the required documentation is completed at the time of receiving of equipment from outside NGA. NGA's mailing address is 7500 GEOINT Drive, Springfield, VA 22150.
5. Transfers of GFP. GFP transfers from one contract to another only when firm requirements exist under the gaining contract (Reference (b)). Such transfers are documented by modifying both the gaining and losing contracts. Once transferred, all property is considered GFP to the gaining contract.
6. Updating asset locations as a result of a move or transfer. ACs identify locations for their equipment and update them as items are moved or upon receipt of a transfer. It is critical to properly record item locations in PS-AM so property can be located expeditiously and without further coordination. NGA employs the location program to record asset location, and the master location table is imported into PS-AM through an automated interface with the Computer Aided Facilities Management (CAFM) database.

If the desired location is not included in the table, the AC submits a request to SIOP to have the new location added to the table.

7. Loans. Property on loan or lease to or from an international partner, government partner, laboratory, or school is accounted for by the AC of the office of primary responsibility for the loan or lease. The AC is required to complete and submit a DD 1149 to TAM Inbox at TAM1@coe.ic.gov.

8. Data quality indicators and program performance measures. On a monthly basis, SIOP reviews the move and transfer data in PS-AM to ensure data quality and program effectiveness.

9. Maintaining equipment moves and transfers records. NGA Form 4151-12, "Request for Equipment Transfer Forms," and other equipment moves documentation, is maintained. See Appendix 5 to Enclosure 9.

APPENDIX 3 TO ENCLOSURE 9CONDUCTING AND DOCUMENTING INVENTORIES

1. Proper accountability for property requires that detailed records be established through the due-in process and by submitting an ADR at or prior to initial asset receipt or at least prior to the asset being released to the program and O&S contractor for inclusion in the operations baseline. Records for all accountable property will be maintained thereafter in PS-AM and reported on NGA's financial management records. Properly planned and executed physical inventories and location surveys confirm the existence of these assets and continuously improve the accuracy of the data recorded in the APSR, such as the quantity, location, condition, and value of the assets.
2. Physical inventories may fulfill different purposes and use different methods, including change of custodian, wall-to-wall, cyclic, sampling, inventory by exception, or data call methodologies. Physical inventory plans provide a schedule for completion of all physical inventories and include an awareness of an item's acquisition or replacement cost, security classification, and its criticality. At a minimum, NGA's property is inventoried every three years; capital assets and classified property are inventoried annually; and sensitive property is inventoried at least ~~semi~~-annually IAW Reference (d) and shall be required in the O&S contract as part of program management metrics. A minimum of 98 percent physical inventory accuracy rate (100 percent for capital, classified, or sensitive property) is achieved and maintained. The parameters for inventory accuracy are established in the inventory plan.
3. SIOE/SIOW serves as SIOP's independent agents for required physical inventories. This function may be contracted.
4. The SIOP inventory manager and assigned team conduct the inventory reconciliations upon receipt of inventory data provided by the SIOE/SIOW inventory teams, quarterly contractor inventory reports, or other inventory data calls.
5. When an AC is replaced, or upon notification from the SIOP office that an AC is leaving NGA or notification through the automated clearance procedures in PeopleSoft, SIOP-managed assets take actions to get the property transferred to an in-coming AC.
6. The SIOP inventory teams evaluate each inventory upon completion and provide the results to the senior managers' program office in the AC's chain of management. The inventory criteria are stated in paragraph 2 of this Appendix and the performance measures are indicated at paragraph 7 of this Appendix. The inventory evaluation memorandum must be signed by the APO or designated representative and addressed to the AC's Office Director (e.g., D/SIO). The original copy of the memorandum will be maintained by SIOP in the AC's file IAW Reference (j ~~e~~). The inventory manager distributes the results immediately upon concluding the inventory.

7. Physical inventories confirm the existence of NGA's accountable assets, improve the accuracy of the data recorded in PS-AM, and ensure that NGA's accountable assets in support of NGA's missions are properly accounted for and controlled. To ensure an effective property management program, the inventory results are provided to the AC. Contractors inventory/data call results are provided to the administering contracting officer for contractor performance review and adjudication.
8. The SIOP inventory manager determines the group of assets to be inventoried and coordinates with the Office of Security (SIS) Classification Management Branch for approval to move the data from the high side to the low side. Upon obtaining approval, the inventory manager transfers the desired assets to the scanner through the manual file transfer process from the high side to the low side. Assets scheduled for inventory will be determined by physical location or responsible AC.
9. The SIOP inventory team reconciles the inventory data, researches discrepancies, makes administrative changes in PS-AM after agreement upon the changes are coordinated and agreed to by the AC, and coordinates subsequent updates to Remedy. The inventory manager further ensures that any required LDD actions are initiated, and inventory results memoranda are prepared and distributed.

APPENDIX 4 TO ENCLOSURE 9MANAGING HERITAGE ASSETS

1. General Policy. Government property relating to NGA and its predecessor organizations that have been identified as historically significant by the NGA historian or designated representative is accounted for, cataloged, preserved, transferred, and disposed of IAW this Manual.

2. Specific policy and procedures.

a. Recipients and holders of historically significant property must coordinate with the NGA Historian to have the property added to accountable inventory records. SIOP can assist with identifying ACs at specific locations.

b. The NGA historian, or his or her designated representative, determines which items have significant historical value and should be recorded in PS-AM and controlled as accountable property.

c. All items of significant historical value, including historical items on loan to NGA, are placed on NGA's historian account. The NGA historian may establish separate accounts for NGA Washington, NGA St. Louis, and NGA Arnold.

d. The NGA historian, or his or her designated representative, may reassign historically significant artifacts to respective site-appointed ACs as required to maintain responsibility and control of these items. The NGA historian coordinates these actions with respective site managers for appointment of ACs.

e. Upon receipt of an ADR for heritage assets, the receiving SIOP team enters \$1.00 in the unit cost field, if cost data is not available and a current market value is not known, and assigns the asset to the appropriate AC in PS-AM.

f. The NGA historian and/or other appointed heritage AC establishes and maintains for each historically significant item a file containing supporting documentation, such as title and transfer documents, correspondence, photographs, and research material as appropriate.

g. If a recipient or holder no longer wishes to retain physical possession of property that may have historical value, it is reported to the NGA historian for disposition instructions.

h. All historically significant property must be assigned to the NGA historian or other heritage AC for a designated site activity. Property is stored logically per good conservation practice and is stored to facilitate retrieval, research, and annual inventory.

i. Heritage assets or other historically significant property are inventoried in the same manner and with the same frequency as inventories for other accountable items.

APPENDIX 5 TO ENCLOSURE 9MAINTAINING PROPERTY RECORDS AND SUPPORTING DOCUMENTATION

1. PS-AM is the APSR records management system for all property files within NGA. Accountable property records must be identified, preserved, protected, and disposed of per the approved records schedule IAW Reference (j e). The property records include both financial accounting and logistical control requirements, encompassing three records series (100, 300, and 1200). SIOP properly identifies, protects, handles, stores, and disposes of official records IAW Reference (j e).
2. The filing plan should group records by calendar or fiscal year. At the end of the year, the folders must be segregated and titled "inactive," and new folders created for the current fiscal or calendar year. Active documents, such as APO and AC appointments, signed equipment listings, and temporary property receipts will be maintained in the current calendar or fiscal year folders. Files must be organized and maintained so they can be retrieved rapidly if needed.
3. ACs should maintain current copies of all relevant documentation, such as appointment order, AC training certification, signed property listing, receipts, transfers, After Action Reports (AARs), and turn-ins. The change documents can be destroyed when the property account is re-inventoried, updated to reflect all changes, and signed.
4. Removal of property records from the PS APSR. PS-AM is the primary property management system for NGA. The use of separate and distinct transactions when removing property facilitates adherence to overall property management systems requirements (managing and accounting for property) and financial reporting, when required. A contract modification is also required to add or delete property to or from a contract.

APPENDIX 6 TO ENCLOSURE 9PROPERTY ACCOUNTABILITY FOR CONTROLLED CRYPTOGRAPHIC ITEMS (CCI)

1. The NGA COMSEC PM ensures that all COMSEC custodians, including contractor personnel, are properly cleared, trustworthy, and trained on their responsibilities for safeguarding the COMSEC material entrusted to them.
2. SIOP coordinates with the COMSEC Program Office to maintain a list of COMSEC primary and alternate custodians and their associated list of CCI in PS-AM.
3. All primary and alternate COMSEC Custodians, including contractor COMSEC custodians, receive NSA-approved training prior to assignment IAW Reference (O W). In addition, initial and annual refresher NGA AC training is required to obtain access to PS-AM.
4. The COMSEC Program Office ensures that all CCI acquired by, issued to, or generated and held by NGA COMSEC custodians are properly accounted for, safeguarded, and controlled.
5. An asset transfer includes the transfer of custodial responsibility for the asset. The losing COMSEC custodian is responsible for initiating and coordinating the transfer activities. All transfers of CCI assigned to NGA COMSEC custodians must be documented on an SF-153, "COMSEC Material Report," and coordinated through the COMSEC Program Office. The COMSEC Program Office approves/disapproves and provides transfer instructions to the COMSEC custodian.
6. All CCI must be physically inventoried annually or upon change of custodianship by the COMSEC custodian. The inventory is conducted by the primary COMSEC custodian and the alternate or a designated cleared witness. The COMSEC Program Office may also conduct inventories to meet these requirements.
7. CCI not in operation must be stored per the requirements outlined in Reference (O W) when it is not under the direct and continuous control of appropriately cleared and authorized personnel. These requirements do not apply to equipment installed for operation, including spares or standby CCI located within the work area. CCI should not be stored in a keyed condition unless operationally necessary. Keyed CCI must be stored IAW the highest classification of the key it holds. The storage methods must reasonably preclude equipment theft or tampering. When keyed CCI is stored in an unmanned space, the cryptographic ignition key must be removed and protected in another location.
8. Prior to the disposition or demilitarization of excess CCI, the COMSEC account custodian must ensure his or her organization is the actual owner of the CCI or has written permission from the owner to dispose of the equipment.

ENCLOSURE 10DISPOSITION OF ASSETS

1. When possible, NGA redistributes excess property within the Agency. NGA also redistributes AIS accountable property to other DoD agencies, local governments, or, if appropriate, educational institutions. This is accomplished to the maximum extent possible and consistent with disposition provided by the DLA support services or disposition instructions provided by administering CO and property administrators for CAP or GFP. When redistribution within NGA or other authorized activity is not possible, NGA disposes of its excess property through DLA, or by the most cost-effective method to the Government, when disposition through DLA is impractical. The primary method for reporting excess property to DLA is through the Electronic Turn-In Document (ETID) system. NGA has established local disposition teams to support the disposal of property at its main campuses and ancillary sites. At external sites where NGA's mission partners have approved processes in place for the disposition of excess AIS property, NGA may utilize those services if available and approved by PM or information system owner. Asset custodians and all personnel involved with the disposition of NGA's excess property ensure the property is properly accounted for, dispositioned in a timely and lawful manner, and national security information and systems are protected throughout the process.

2. PAMs, ACs, COs, and CPMs are responsible for reporting excess property. All excess property must be initially identified in PS-AM. The AC selects the item(s) in PS-AM and submits a change request to initiate excess property turn-in. A system generated e-mail notification is sent to the SIOP disposal team to track and process the pending actions. The asset(s) identified as excess automatically move(s) to a pending status within PS-AM once identified as excess. These assets remain assigned to the asset custodian until removed by the disposition Team. There are several other distinct reporting procedures based on the type of property being excessed to determine its final disposition. Depending on the particular situation, excess property is reported as follows:

a. IT Assets. All excess IT assets must be reported in Remedy. The AC prepares NGA Form 4151-12A, "Request for Equipment Turn-In," and submits a change request in Remedy for property turn-in. The AC may also call in the work order through the ESC at 1-800-455-0899.

b. E-Waste and other excess property at external sites. In the event NGA's mission partners have approved processes in place for the disposition of excess AIS property, NGA's customers may utilize these services if they are available and approved by the ISO/PM.

(1) Excess requests must be initiated in PS-AM and Remedy.

(2) Sanitization documentation must show that the property was sanitized, sanitization was verified by an individual other than the one who conducted the sanitization, and the ISO/PM or designated representative has certified the process IAW References (o w) and (p y).

(3) Destruction certificates must be prepared and provided to support destroyed media or the media has to be turned in to SIOE or SLOW for destruction.

c. Non-IT assets. The AC prepares NGA Form 4151-12A, "Request for Equipment Turn-In," listing the excess property with appropriate condition code.

(1) Serviceable non-IT assets. The AC submits turn-in requests for serviceable assets to SIOP for publication on the TAM web site. SIOP posts assets on PS-AM excess website for review by the NGA community to determine repurpose. SIOP coordinates transfers to the gaining custodians for items requested. SIOP directs the AC to continue with the disposal for items not requested after 14 days.

(2) Unserviceable non-IT assets. The AC prepares NGA Form 4100-10, "Work Request," and submits it with the NGA Form 4151-12A, "Request for Equipment Turn-In," to the supporting Workforce Support Center (WSC) to have the assets picked up by the SIOE/SLOW Disposition Team.

(a) Base Operations Service Contractor – East:

- i. Unclassified e-mail: InstallationOperationsSpringfield@nga.mil
- ii. Classified e-mail: InstallationOperationsSpringfield@coe.ic.gov
- iii. Unclassified Phone Number: 571-557-1111

(b) Base Operations Service Contractor – West:

- i. Classified email: FacilitiesServiceDeskWest@coe.ic.gov (NGA Net Only)
- ii. Unclassified Phone Number: 314-676-9071

(3) Excess furniture. The AC reports serviceable excess furniture to the Space and Interiors Division (SIOI) via e-mail at SpaceInteriorsDivision@coe.ic.gov and coordinates any transfers as directed by the SIOI staff. The AC follows procedures in paragraph 2.b (2) to have unserviceable furniture picked up by the supporting disposition team. When the unserviceable furniture includes items such as desks, safes, and cabinets, the AC coordinates with SIS Physical Security Division (SISI) to sanitize the property for disposal.

d. Weapons and Ammunition. The AC prepares NGA Form 4151-12A, "Request for Equipment Turn-In," listing the excess property with appropriate condition code, and

submits a work request to the WSC to have the assets picked up by the SIOE/SIOW disposition team. The customer retains custody of the assets until disposition instructions are received from DLA and the supporting disposition team. Unserviceable or excess weapons in deployed areas may be disposed through local mission partners upon approval from the NGA APO.

(1) Weapons. The SIOE/SIOW Disposition Team reports excess weapons to DLA Disposition Services Central Demilitarization Division, Anniston, AL, at (unclassified) 256-741-5462 or (defense switch network (DSN)) 571-5462 for turn in and shipping instructions.

(2) Ammunition. SISI coordinates disposition of excess ammunition or ammunition residue through local vendors and ranges. In the event SISI cannot facilitate this action, the property is reported to the SIOE/SIOW Disposition Team for disposal. The SIOE disposition team at NGA Washington coordinates disposition of excess ammunition or ammunition residue through Fort AP Hill Ammunition Supply Point, Lynchburg, VA, 24501 (unclassified) 804-633-8801. The SIOW disposition team at NGA St. Louis and NGA Arnold coordinates disposition of excess ammunition or ammunition residue through Scott AFB, Ammunition Supply Point, Shiloh, IL, 62225 (unclassified) 618-256-2817.

e. Scrap. Scrap is disposed of per local site procedures. Contractors with approved scrap procedures may dispose of scrap resulting from production or testing under their contract without government approval. However, if the scrap requires demilitarization or is sensitive property, the contractor submits the scrap on an inventory disposal schedule to SIOP. Accountable property items are not disposed of as scrap.

f. CAP or GFP (all types). Contractor PMs, in addition to identifying the excess in PS-AM and reporting the AIS property as excess in Remedy, must submit requests in writing to the Government PM or CO for disposal instructions when GFP or CAP is no longer required for contract performance. Unless outlined in the contract, the contractor does not dispose of any government property until the PM, CO, or plant clearance officer grants authorization in writing.

3. TOP representatives review all requests for turn-in of AIS equipment, to include excess GFP, to determine whether there is a need to repurpose within the Agency or to process it for disposal if it is no longer needed.

4. Providing written disposition instructions to the ISO or PM to transfer the property to another NGA activity or to process it for turn-in requires NGA Form 4151.12A, "Request for Equipment Turn-In."

a. Instructions to Repurpose.

(1) Action Officers from TOP coordinate with PMs to direct transfer to a gaining activity or AC for assets that need to be repurposed.

(2) Action Officers from TOP may also hold the property for follow-on redistribution by coordinating a transfer from the custodian's account to a TOPAS AC.

b. Instructions for Disposal.

(1) ISO/PMs ensure program technicians sanitize the property per CIO-T sanitization and disposal work instructions; and NGA Form 5215-26, "Certification of Hard Drive Disposition," is filled out and the completed form is affixed to all sanitized equipment that contain hard drives.

(2) ISO/PMs ensure NGA Form 5215-27A, "Approved for Release," labels are affixed on all AIS equipment being turned in that do not require the hard drive certification label.

(3) ISO/PMs ensure NGA Form 5215-27B, "Burn-In Detected Release Destroy," labels are affixed to all equipment with burn-in that needs to be destroyed, or other equipment such as PITDs, that needs to be destroyed.

(4) Program technicians obtain the ISO/PM or designated Information Systems Security Engineer (ISSE)/ISSO certification on NGA Form 4151-12A, "Request for Equipment Turn-in."

(5) Program technicians, or individuals conducting the sanitization, must also document all hard drives that are pulled during the sanitization process. Documentation should include description, model, and serial number on NGA Form 4151-12A, "Request for Equipment Turn-in," to the AC and disposes of any components that are removed in the sanitization process through the local SI classified material disposal unit.

(6) The ISO or PM must ensure the sanitization of equipment assigned to their programs is witnessed and certified by a designated authorized individual and all hard drives pulled during the sanitization process must also be documented and controlled through destruction.

(7) ACs coordinate pick-up with the specific site disposition team on conclusion of the sanitization process.

5. Upon receiving work orders for pickup of excess equipment, local disposition team representatives locate the property and confirm whether or not the documentation was complete and the property was sanitized with the appropriate labels attached. In instances in which the documentation is incomplete or the property is not properly sanitized, the SIOE/SIOW representative coordinates with the customer to resolve before taking possession. The SIOE/SIOW representative reports all instances to Chief, Information Security Division, when property is delivered to the material handling center and it is found to be not properly sanitized. If the equipment is properly sanitized and

labeled and the documentation is complete, the disposition representative does the following:

- a. Inventories the property and signs NGA Form 4151-12A, "Request for Equipment Turn-In," thereby accepting responsibility for the accountable items, and removes the items within five business days of receipt of the work order.
 - b. Ensures that hard drives are inventoried by serial number, signed for upon receipt, and controlled in a secure holding area until transferred to the destruction activity.
 - c. Coordinates excess receipt/pick-up actions in PS-AM.
 - d. Verifies or ensures that labels identifying the asset as property of any US Government organization are removed from the equipment. Generic bar code labels with no association to the US Government need not be removed.
 - e. Coordinates destruction of hard drives, monitors with burn-in detected, and other components that contain non-volatile memory. Ensures that a certificate of destruction is prepared and maintained to verify destruction IAW Reference (j e).
 - f. Reports the excess property to DLA through the ETID. Dispositions the excess, according to DLA instructions, to other agencies, local governments, or schools, or turns the property in to DLA.
 - g. Reports excess weapons to DLA Disposition Services Central Demilitarization (DEMIL) Division Anniston, AL, 36201-4199, at (unclassified) 256-741-5462 or (DSN) 571-5462 for turn-in and shipping instructions per DLA's instructions. Ensures that an inert certificate is prepared for each weapon. The inert certificate template can be obtained from SIOP.
 - h. Coordinates and disposes of excess ammunition or ammunition residue through Fort AP Hill Ammunition Supply Point (ASP), Lynchburg, VA, 24501 (unclassified) 804-633-8801. Ensure an inert certificate is prepared as required.
 - i. Removes the item's inventory record from PS-AM and prints the appropriate forms: DD Form 1348-1A, "Issue release/Receipt Document," for property sent to DLA, and DD Form 1149, "Requisition and Invoice/Shipping Document," for property sent to non-DLA destinations. The supporting disposition team retains paperwork signed by the recipient for proof of final disposition IAW Reference (j e).
 - j. Provides copies of turn-in documentation to SIOP on a weekly basis for all capitalized assets turned-in.
6. SIOP reviews the capitalized asset turn-in documentation to ensure accuracy and completeness and forwards to FMC for further processing.

7. FMC reviews all capital asset turn-in documentation for financial impacts including the associated accumulated depreciation and all improvements to the assets, recognizing the loss as a result of the turn-in.

8. FMC ensures that asset records are appropriately reflected within the financial system GEO-F at the time of disposition.

9. The SIOE/SIOW disposition teams are assigned areas of responsibility (AOR) per their respective BOS contract to provide service to NGA's external sites/NGA Support Team.

a. Continental US AOR:

(1) NGA Washington-East of the Mississippi.

(2) NGA St. Louis and NGA Arnold -West of the Mississippi to include Alaska and Hawaii.

b. Outside Continental US AOR: NGA Washington – (All.) This includes Europe, Asia, Middle East, Caribbean, Latin America, Africa, and Australia.

c. Either the ISO, PM, or CO can retain responsibility for the disposition for property in the possession of contractors, such as CAP and GFP.

10. On a monthly basis, SIOP reviews the equipment turn-in records in PS-AM to ensure data quality and program effectiveness.

a. SIOP ensures that documentation was on hand for all capital assets turned in and that copies were provided to the FMC office for reconciliation in GEO-F. The appropriate disposition activity is contacted to provide any missing documentation.

b. On a monthly basis, SIOP reviews the excess requests for the assets picked up by the disposition teams that are being processed for disposal. Items not disposed of within 60 days are reported to management as overdue.

c. On a routine basis, SIOP conducts a random comparison of items turned into PS-AM to the supporting records on file. Results are reported to management and inquiries initiated for any records noted as missing.

11. Disposition documentation, such as DD Form 1348-1A, "Issue Release/Receipt Document," DD Form 1149, "Requisition and Invoice/Shipping Document," NGA Form 4151-12A, "Request for Equipment Turn-In," and other equipment turn-in documentation are maintained IAW Reference (j e).

APPENDIX 1 TO ENCLOSURE 10LOST, DAMAGED, OR DESTROYED (LDD) PROPERTY IMPLEMENTING
INSTRUCTIONS

1. DD Form 200, "Financial Liability Investigation of Property Loss," is the primary method used at NGA to document inquiries for property noted as LDD. It is also the primary documentation required to adjust the property records upon completion of the inquiry as appropriate. When property in the possession of contractors is reported as missing, the FAR government property clause is followed to adjust the property records and a DD Form 200, "Financial Liability Investigation of Property Loss," is initiated if necessary IAW Reference (a). Prior to reporting property as missing, the AC or other responsible party conducts a search of adjoining spaces and requests a query of Remedy CMDB. Upon notification that accountable property is reported as LDD by NGA personnel, or noted as LDD at the conclusion of an inventory, SIOP initiates investigation actions within 10 days of the notification and tracks the progress of the investigation through completion.

a. AC or personnel report LDD government property to SIOP upon discovering that the accountable property is LDD or after conducting required searches. In instances in which a PITD is lost or stolen, the AC immediately reports the loss or theft to the PITD store representative and to the Cyber Assurance and Verification Office, Cyber Security Operations Cell.

b. SIOE/SIOW inventory teams notify the respective AC and SIOP of any LDD property noted during an inventory, and allow the AC and the SIOP office five calendar days to search adjoining spaces, request Remedy validation checks, or research supporting documentation for items noted as missing. Stolen, damaged, or destroyed property are immediately reported to SIOP for initiation of the LDD actions. The SIOP action officer initiates the LDD actions within 10 calendar days after the five-day search.

c. SIOP notifies contractors of any losses noted during reconciliation of inventory reports and allows the contractor five calendar days to provide the required supporting documentation. If the missing items are not reconciled, SIOP coordinates with the AC recorded in PS-AM to initiate LDD actions IAW paragraph 1.b.

2. The SIOP LDD action officer populates the LDD database with the below information upon receipt of an LDD notification from an AC through PS-AM, data call reconciliation, or other communications. Inventory technicians may also initiate LDD actions upon reconciliation of an inventory, per their assigned PS-AM access privileges.

- a. Inquiry/Investigation Number
- b. Employee ID account number
- c. Employee Name or User

- d. Date initiated
- e. Office code
- f. Number of items
- g. Type of items (AIS or other)
- h. Lost, damaged, or destroyed
- i. Acquisition cost
- j. Acquisition date

3. Upon populating the LDD database with the required LDD information, the SIOP action officer prepares the NGA unaccounted for property report from PS-AM, obtains a copy of the NGA LDD instructions for investigating officials, creates a request for investigation in , and provides all documentation in softcopy to C/SIOP. The suspense for these actions is 15 calendar days for initial notification of the loss.

4. C/SIOP forwards the memorandum, the NGA unaccounted for property report, the instructions for the investigating official, and request tasker to SI administration personnel for input into N-CERTS for tasking to the appropriate Component or CO to conduct investigations IAW References (a) and (1 f). If appropriate, the package is also forwarded to the Site Security Officer for initiation of a security investigation. When the LDD property involves a capitalized asset, the LDD action officer must include a copy of the acquisition and receipt documentation in the package. The LDD action officer ensures that copies of the package are provided to each individual or office listed in the copy-to column. The LDD action officer monitors the LDD taskers through completion and engages the various Components at the 30- and 45-day intervals when the inquiry is not expedited. The LDD action officer requests assistance from SIO LDD action officer if the report is not completed within the 60-day suspense. A letter of lateness must be included in the report for all LDDs overdue for more than the allotted 60-day suspense timeframe.

5. Upon completion of the LDD inquiry, the LDD action officer adjusts PS-AM as appropriate and provides a copy of the completed DD Form 200, "Financial Liability Investigations," for LDD property, or contractor LDD report and all exhibits to the APO for final coordination in Block 17 of the DD Form 200.

6. Upon final coordination by the APO, the SIOP LDD action officer notifies SI suspense coordinator of completion, requests the N-CERTS tasker be closed, and updates the LDD database.

ENCLOSURE 11ACCOUNTABILITY FOR CONTRACTOR-ACQUIRED PROPERTY (CAP),
GOVERNMENT-FURNISHED PROPERTY (GFP), AND PROPERTY IN POSSESSION
OF CONTRACTORS (PIPC)

1. General policy. Contractors are ordinarily required to furnish all property to perform government contracts. However, government property may be furnished to, or acquired by contractors, under the terms and conditions of a contract. If contractors possess NGA property, they are required to maintain property records per the property clauses contained in the contract. In addition, all accountable CAP provided by the contractor for performing a contract and to which the government has title, is recorded in PS-AM for financial reporting purposes.

a. Contractor accountability and responsibility is IAW References (a), (b), and (h ~~m~~).

b. NGA contracts containing NGA CAP or GFP that were let prior to the creation of the November 2015 local property contract clause will be modified on a case-by-case basis to incorporate the local clause as determined by the cognizant CO. In the event the November 2015 local clause is not incorporated into the contract, the CO may designate SIOP as the PA via memorandum to allow the PA sufficient authority to ensure the current contract requires the contractor to report NGA CAP or GFP on hand to the PA. The property required to be reported is listed in Enclosure 9.

c. The program office maintains direct responsibility and control over the property under a contract and designates a CPM on NGA Form 4140-5, "NGA TAM User Access Appointment/Designation," to maintain stewardship responsibility for property assigned to the contract or acquired by the contractor. In instances in which a CPM is not designated in writing, the property is assigned to the COR of the contract in PS-AM.

2. Specific procedures. IAW Reference (h ~~m~~), SIOP is assigned as the PA for NGA contracts with GFP, CAP, and PIPC. The PA must do the following:

a. Provide a completed NGA Form 4140-5, "NGA TAM User Access Appointment/Designation," to SIOP on the CPM for all new contracts and update as changes occur (e.g., provide a new appointment form within five business days on departure of a CPM). The PA also ensures a CPM is designated in writing for each legacy contract. In the event the CPM does not have access to the NGANet, the PA appoints the COR or other government official as the AC.

b. Ensure the CPM coordinates with SIOP to obtain barcodes or the barcode series numbers for use in identifying NGA property.

c. Ensure the contractor provides an electronic ADR to SIOP upon receipt of all government property for which NGA has the title. The ADR must be provided within three business days of receipt by e-mail via a web portal.

(1) The ADR must have appropriate data fields populated, such as CPM, employee ID number, contract number, asset ID, and asset class.

(2) Supporting documentation must be provided for all capitalized assets (assets that cost \$250,000 or more).

d. Upon receipt of the completed NGA Form 4140-5, "NGA TAM User Access Appointment/Designation," SIOF does the following:

(1) Coordinates the CPM's training and access to the system per Enclosure 4 of this Manual.

(2) Populates ADRs received to PS-AMs Coordinates resolution on discrepancies with the CPM.

(3) Provides copies of supporting documentation to FMC on each capital asset reported.

e. All accountable NGA property transferred to a contractor as GFP must be documented by contract modification to the gaining and losing contracts and recorded in PS-AM.

(1) The gaining and losing COs coordinate and approve the transfer of equipment and prepare the required contract modification for each contract. The COs also determine and agree on shipment, delivery methods, and related costs.

(2) The losing CO obtains ISO or PM's approval for any used IT assets being transferred.

(3) The transfer of accountability of property provided to a contractor is accomplished using DD Form 1149, "Requisition and Invoice/Shipping Document," DD Form 250, "Material Inspection and Receiving Report," or DD Form 1348-1A, "Issue Release/Receipt Document." Copies of these forms can be obtained from the TAM web site.

(4) The gaining contractor must inventory and sign for the property upon receipt. The receipt documentation is provided to SIOF to update PS-AM and to each contract office for inclusion in the official contract file.

(5) SIOF updates PS-AM on receipt of the completed transfer documentation and provides a copy to FMC as necessary.

f. Respective PAs ensure that all NGA accountable property in the possession of contractors is inventoried on an annual basis and initial and subsequent annual reports are provided to the CO and SIOF. The PA does the following:

(1) Ensures the contractor submits the report in the method prescribed by the government for all CAP and GFP accountable to the contract.

(2) Ensures the contractor provides supporting documentation for all property delivered where the final government unit cost is \$250,000 or more. The supporting documentation is the signed receiving report and associated invoice submitted to the CO or designated representative without deviation on which the government was billed as required by Reference (a).

(3) NGA may include PIPCs in its inventory schedule.

g. Upon receipt of a contractor-conducted inventory, data call, or SIOE/SIOW-conducted inventory, the results are reconciled as indicated in Enclosure 9 of this Manual and published as follows:

(1) The inventory results memorandum is forwarded to the CO for any administrative actions as required by Appendix 3 of Enclosure 9.

(2) Any LDD noted is processed through the SIOP PA or CO for adjudication per Appendix 1 of Enclosure 9.

(3) Inventory metrics are reported to SIOP.

h. Excess NGA accountable property (CAP, GFP, and PIPC) in the possession of contractors must be identified in PS-AM and reported to the CO and appointed PA. SIOP forwards the excess report to TOPA representatives to determine repurpose needs within NGA. Detailed reporting and disposition instructions are included in the procedures outlined in Enclosure 10 of this Manual. The PA ensures the contractor does the following:

(1) Properly sanitizes excess IT property and obtains certification by an ISO/PM or their designated representative prior to disposition.

(2) Dispositions excess property according to the instructions provided by the CO or PA.

(3) Upon final disposition, provides disposition documents to the PA/SIOP to update PS-AM and to the CO to maintain in the official contract file.

i. Upon termination or completion of the contract, a joint physical inventory by the contractor and the PA, or designated representative or gaining contractor, must be accomplished prior to or concurrent with the disposed damage review process. The losing contractor prepares a transfer document, such as a DD Form 250, "Material Inspection and Receiving Report," DD Form 1149, "Requisition and Invoice/Shipping Document," or DD Form 1348-1A, "Issue Release/Receipt Document," to transfer accountability to the gaining CO, PA, or other contractor.

(1) The losing CO or PA forwards the completed transfer documentation to SIOP to update PS-AM.

(2) SIOP reconciles the account upon receipt of the transfer documentation and assigns the property to the gaining contractor in PS-AM. An LDD report may also be initiated, if required, and provided to the losing CO or PA for adjudication.

j. Upon adjudication of LDD reports, the CO or PA notifies SIOP in writing to discontinue accountability for the property in question. Notification by email is acceptable.

APPENDIX 1 TO ENCLOSURE 11CONTRACT PROPERTY ADMINISTRATION

1. General policy. Contractor property management systems must meet the requirements outlined in References (a) and (b) and the contract terms and conditions. This section establishes the procedures for the administration and oversight of government contract property (hereinafter referred to as property) and applies to all NGA DoD contracts, and acquisitions by other activities on behalf of NGA, when incorporated through Memorandums of Agreement (MoAs) or other similar documents.

2. Specific procedures. Throughout this Appendix, all references to days are calendar days. Upon receipt of a new contract, the assigned PAs review and manage the contract according to the following procedures:

a. When reviewing new contracts, SIOP:

(1) Reviews each new contract (as routed by PRISM or obtained manually) within 30 days of receipt to determine if property assignment is required; the term receipt indicates the day the contract document arrives in a PA's email inbox.

(2) Ensures that contracts contain appropriate terms and conditions, including FAR and DFARS clauses, relevant to property expected to be furnished or acquired. Examples of relevant clauses include, but are not limited to, FAR clauses at 45.101, 52.245-1, and 52.245-9; DFARS clauses 252.211-7003, 252.245-7000, 252.245-7001, 252.245-7003, 252.245-7004, 252.242-7004, and 252.242-7005; and NARI clause 5X52.45.102-9000 (References (a), (b), and (h ~~m~~)).

(3) Is alert to the following:

(a) Potentially inappropriate instances of GFP or CAP such as common office items or general purpose equipment.

(b) Period of performance dates (to plan for expeditious property disposition and contract closeout).

(c) Special or unusual contract terms and conditions, such as those involving sensitive property, as defined in Reference (b), physical inventory performance, demilitarization, special storage, or unique property disposition requirements.

b. PAs issue reports for contracts lacking appropriate terms and conditions and notify the CO in writing.

c. PAs establish contract property management files. PAs establish the following documentation (at a minimum) for each accepted contractor:

(1) Contractor Master File.

(a) Records of site visits (other than those conducted for PMSA performance).

(b) Correspondence and documentation general in nature (e.g., not tied to a single contract).

(c) Copies of audits and inspections performed by other activities (e.g., Defense Contract Audit Agency, Defense Security Service).

(d) Copy of contractor's property management system procedures (if practical).

(e) Other documentation common to all contracts.

(2) Contract file. At a minimum, each accepted contract is required to maintain all documentation and correspondence directly related to the contract, including outside audits, memorandums, and correspondence involving responsibility and liability for property loss.

(3) PMSA files are required for each completed PMSA. The following documentation is required (at a minimum) for each contractor:

(a) Contract review correspondence and memorandums.

(b) PMSA notification letter.

(c) Business system analysis summary and audit reports.

(d) Procedure review findings and correspondence.

(e) Risk assessments and PMSA plans; levels of oversight determinations regarding processes or elements waived or determined not applicable.

(f) CO correspondence.

(g) Work papers and support documentation, such as sampling plans and narratives and internal memorandums, to contracting officers or other functional specialists.

d. PAs accept new contractors. Within 30 days of property assignment, the PA does the following:

(1) Sends the new contractor a letter of introduction advising them of their contractual responsibilities. The letter requests the contractor provide a copy of their property management procedures and the names of appropriate points of contact.

(2) Submits a post-award orientation recommendation (if warranted) to the CO, including the rationale and recommended type of orientation.

(3) Obtains contractor policies and procedures and reviews procedures within 45 days of receipt. If the procedures are unacceptable, the PA notifies the contractor in writing that their procedures are unacceptable as written and that failure to produce acceptable procedures may invoke contractual remedies. In such cases, the PA may grant the contractor additional time, not greater than 45 days, to resubmit procedures. If the resubmitted procedures are unacceptable, the PA:

(a) Notifies the CO in writing if, after 45 days, the procedures remain unacceptable.

(b) Considers the action a completed PMSA.

e. The PA conducts the contractor PMSA IAW Reference (b). The PA:

(1) Prepares a schedule and audit plan.

(2) Notifies the contractor in writing of the schedule.

(3) Schedules and holds an entrance conference with the contractor managerial personnel.

(4) Performs the audit according to the published schedule.

(5) Conducts an exit conference with the contractor's managerial personnel upon completion of the audit.

(6) Prepares a written summary of findings to support continued adequacy of the system and/or defects identified.

(7) Develops a corrective action plan that shows milestones and timeframes for the correction of the deficiencies (as appropriate).

(8) Ensures that corrective actions are accomplished as scheduled.

(9) Schedules with the contractor and conducts the re-audit of any process or sub-process that was found to be unsatisfactory.

f. PAs ensure contractors provide the information required by FAR 52.245-1(f)(1)(vii)(B)(1) through (12) (Reference (a)) when government property provided to the contractor or acquired by the contractor that the government has title to is reported as LDD. Within 75 days of receiving an acceptable property loss report from the contractor, the PA does the following:

(1) Ensures that contractor-reported loss meets the FAR/DFARS (or other contract terms and conditions) definition and reporting criteria for loss of government property as defined in Reference (b).

(2) Reviews contract terms and conditions, determines whether risk of loss is assumed by government or contractor, and assesses the extent of subcontractor responsibility and liability (if property loss occurred at the prime's subcontractor).

(3) Evaluates facts and circumstances including whether the loss is covered by insurance and/or the contractor was (or expected to be) otherwise reimbursed.

(4) Determines whether property loss was caused by deficiencies in the contractor's property management system. If so, the PA requests the contractor provide a corrective action plan that shows milestones and timeframes for the correction of the deficiencies (as appropriate).

(5) On the basis of the findings and conclusions, resulting from actions described in paragraphs 2.f.(1) through 2.f.(4) within this section, may relieve the contractor of responsibility and liability (FAR 45.105(d), Reference (a)) when the possibility of property loss was a risk assumed by the government under the contract. If potential property loss was a risk assumed by the contractor, the PA recommends the CO take the following actions as appropriate:

(a) Hold the contractor responsible and liable for the item's unit acquisition cost (in full or in part).

(b) Authorize contractor to repair or replace the property.

(c) Determine a form of consideration appropriate for the circumstances.

(d) Take other required actions as may be necessary and appropriate by contract terms and conditions.

(6) The CO may hold the contractor responsible and liable when one or more of the following conditions exist:

(a) Property loss is a result of willful misconduct or lack-of-good faith on the part of contractor managerial personnel per FAR 52.245-1(h) (1) (ii). (Reference (a))

(b) The government's assumption of risk for property loss was previously withdrawn per FAR 45.104(b). (Reference (a))

(c) The loss is covered by insurance or the contractor is/will be otherwise reimbursed, or the possibility of property loss was a risk assumed by the contractor (e.g., such action is authorized by contract terms and conditions.)

g. Government property no longer needed for contract performance is disposed of effectively, efficiently, consistent with FAR and DFARS requirements, and IAW contract terms and conditions. Except as otherwise provided for in the contract, contractors do not dispose of contractor inventory until authorized to do so by the PA, PLCO, or CO. Contractors submit SF 1428, "Inventory Disposal Schedule," to the PLCO no later than 30 days following the contractor's determination that items are no longer required for contract performance, per FAR Part 52.245-1(j) (Reference (a)). For termination inventory, contract deliveries, or performance, the termination contracting officer may give approval for the contractor to submit inventory schedules 60 days or longer. Upon receipt of an inventory disposal schedule, the PA/PLCO does the following:

(1) Reviews and accepts, or returns for correction, inventory disposal schedules within 10 days following receipt from a contractor. Schedules completed per the instructions for SF 1428, "Inventory Disposal Schedule," are accepted.

(2) Notifies the assigned PA and/or CO of repeated significant inaccuracies of contractor reported data.

(3) Establishes plant clearance cases within 10 days of receiving the contractor's SF 1428, "Inventory Disposal Schedule," inventory disposal schedule.

(4) Processes all inventory disposal schedules through the appropriate activities to determine potential re-use or transfer within the agency and the intelligence community. Reusable and needed property is transferred as appropriate.

(5) Coordinates with the CO to determine which disposition method is in the best interest of the government and provides contractor disposition instructions on DD Form 1637, "Notice of Acceptance of Inventory Schedule," for the excess property within 120 days of receipt. Failure to provide timely disposition instructions may entitle the contractor to an equitable adjustment.

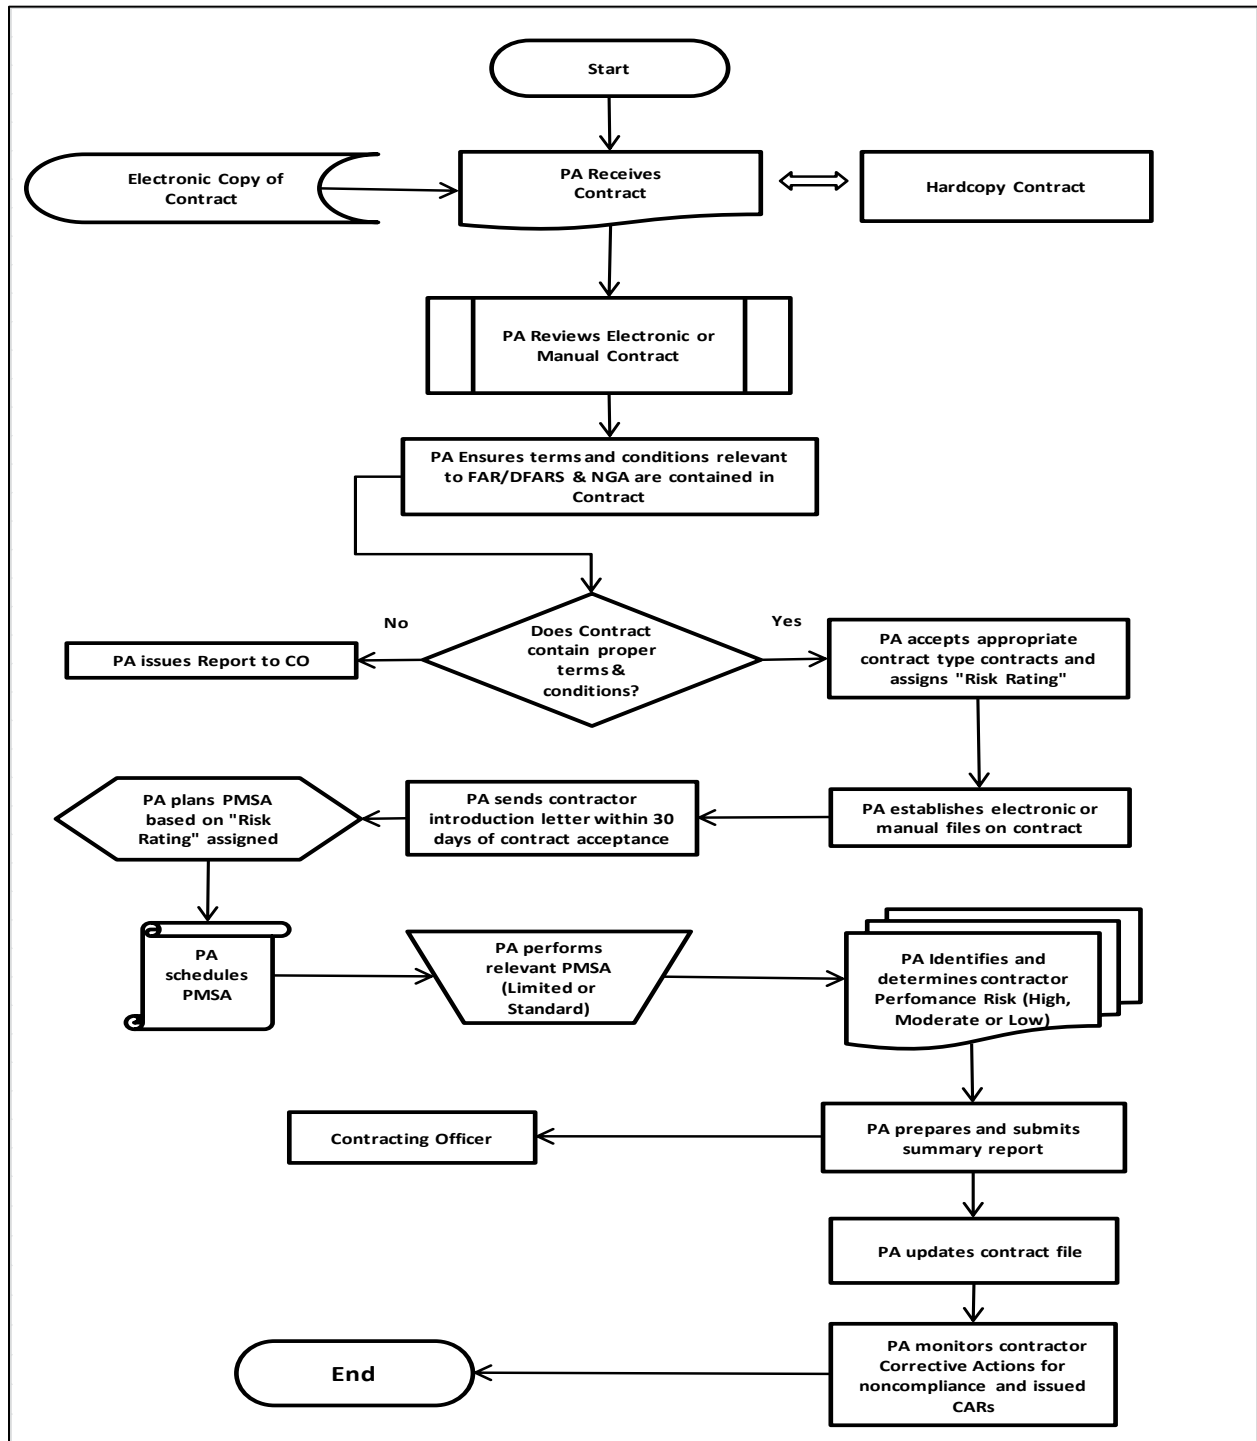

(6) Ensures that the contractor takes appropriate and necessary steps to prevent release of property containing classified and/or controlled unclassified data and information prior to disposal of reported excess property. Appropriate and necessary steps in this case include destroying, purging, degaussing, sanitizing, or overwriting the hard drive or other data storage device. The hard drive certificate or certification documentation is provided certifying that sanitizing has taken place. This is consistent with the requirements of the DFARS 252.204-7000. (Reference (b)).

(7) In coordination with the assigned PA, ensures that contractor property management procedures include guidance on the proper disposal of residue resulting from demilitarization, mutilation, and destructions actions. Notifies the CO in writing of those contracts lacking appropriate property disposition terms and conditions, including demilitarization.

(8) Closes the plant clearance case on receipt of proof of disposal and maintains all related documentation in the plant clearance case file, such as SF 1428, "Inventory

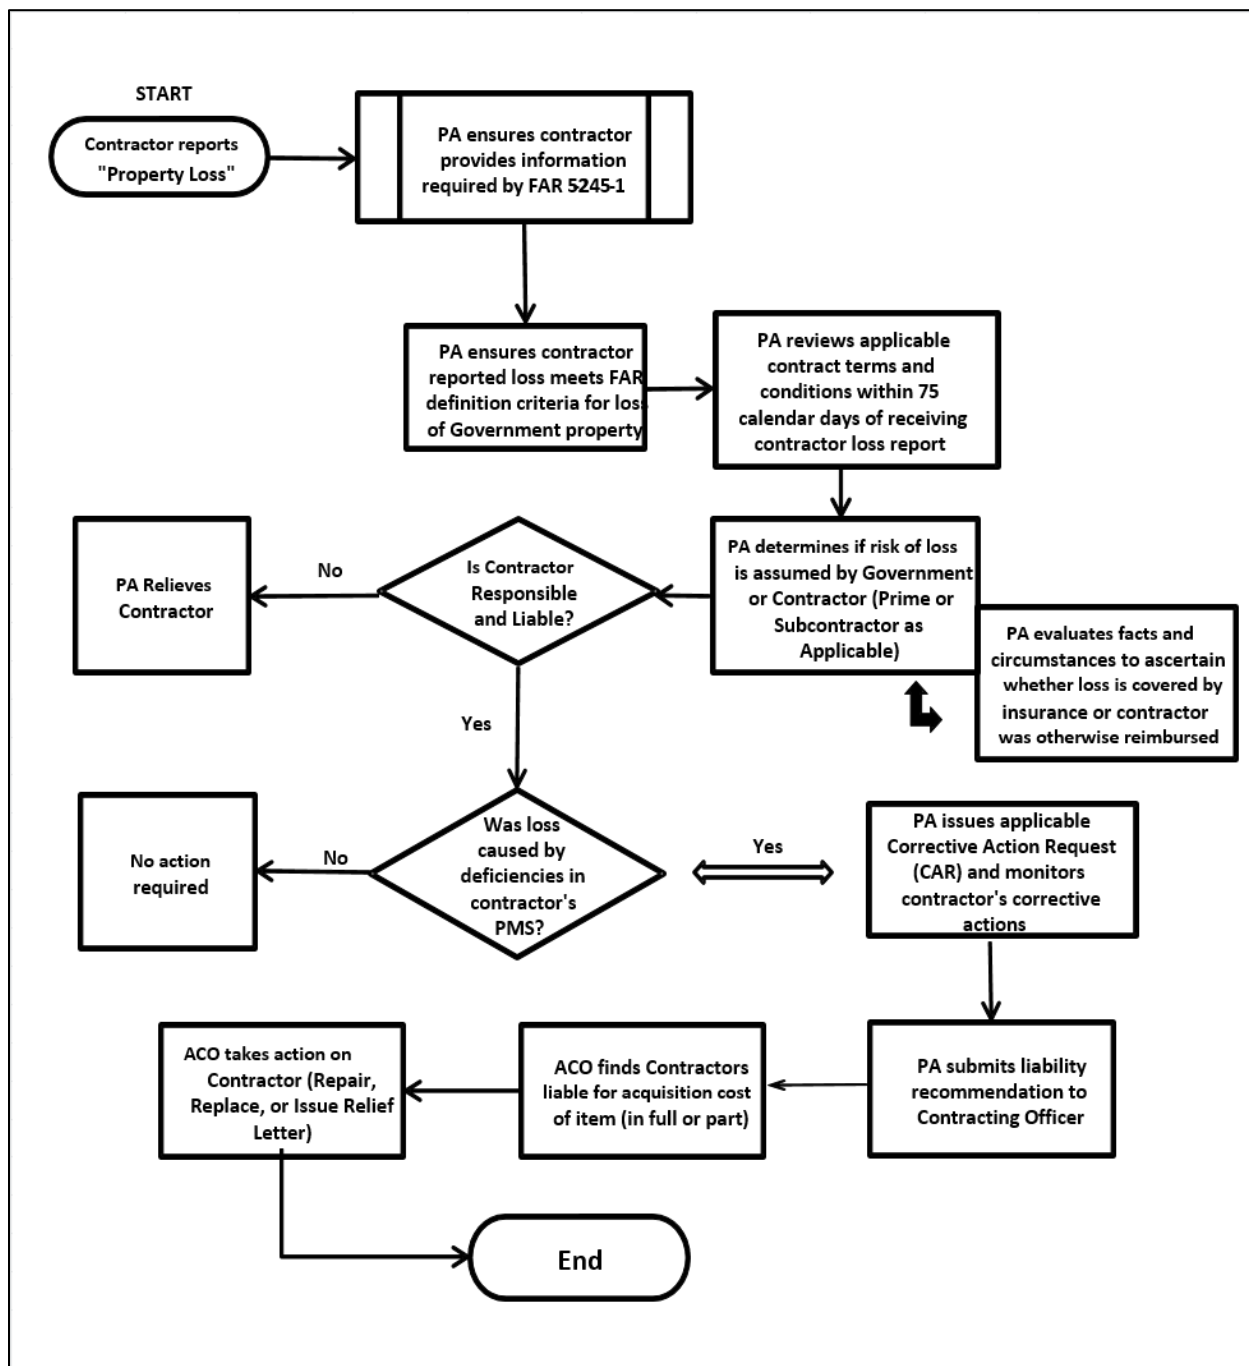

Disposal Schedule," DD Form 1637, "Notice of Acceptance of Inventory Schedules," and other disposal documentation or correspondence related to the case.

APPENDIX 2 TO ENCLOSURE 11

INCOMING CONTRACT PROPERTY MANAGEMENT FLOWCHART

APPENDIX 3 TO ENCLOSURE 11

INCOMING PROPERTY LOSS FLOWCHART

GLOSSARY

Acceptance	A formal certification that the goods or services have been received and that they conform to the terms of the contract. (Reference (a))
Accountability	The obligation imposed by law, lawful order, or regulation, accepted by an organization or person for keeping accurate records and to ensure control of property, documents or funds, with or without physical possession. The obligation, in this context, refers to the fiduciary duties, responsibilities, and obligations necessary for protecting the public interest; however, it does not necessarily impose personal liability upon an organization or person. (Reference (d e))
Accountable Property	Property that meets accountability requirements. This property is recorded in the accountable property system of record (APSR). (Reference (d e))
Accountable Property Record	The record contained within the APSR. (Reference (d e))
Acquisition	Acquiring hardware, supplies, or services: Through purchase, lease, or other means, including transfer or fabrication, whether the supplies or services are already in existence or must be created, developed, demonstrated, and evaluated; By contract with appropriated funds of supplies or services. (Reference (d e))
Acquisition Cost	The amount, net of both trade and cash discounts, paid for the property, plus transportation costs and other ancillary costs. See "full cost." (Reference (d e))
Accountable Property Officer (APO)	An individual who, based on his or her training, knowledge, and experience in property management, accountability, and control procedures, is appointed in writing through the DoD Component procedures to establish and maintain an organization's accountable property records, systems, or financial records, in connection with government property, irrespective of whether the property is in the individual's possession. (Reference (d e))
Asset Custodian (AC)	An individual appointed by the Component/Office Director/PM/CO or immediate supervisor who accepts custodial responsibility for property, typically by signing a

	property receipt. The property custodian is directly responsible for the physical custody of accountable property under their control. (Definition created by NGA for NGA purposes only)
Contractor Acquired Property (CAP)	Any property acquired, fabricated, or otherwise provided by the contractor for performing a contract, and to which the government has title. CAP that is subsequently delivered and accepted by the government for use on the same or another contract is considered GFP. (Reference (d e))
Capitalize	To record and carry forward into one or more future periods any expenditure the benefits from which will then be realized. (Reference (d e))
Capitalized Assets	Assets, including some computer software, that have a useful life of two years or more and are capitalized and reported in financial statements when the acquisition cost equals or exceeds the expense/investment threshold used by Congress for appropriating DoD operating and procurement appropriation (currently \$250,000). (Definition created by NGA for NGA purposes only.)
Condition Code	A code used to classify materiel for degree of serviceability, condition, and completeness in terms of readiness for use. (Definition created by NGA for NGA purposes only.)
Contract	Any enforceable agreement, including rental and lease agreements and purchase orders, between an agency and a business concern for the acquisition of property or services. (Reference (d e))
Contracting Officer	A person with the authority to enter into and administer contracts. The person may be a contracting officer either by virtue of position or by appointment under procedures prescribed by the DFARS. This person may make determinations and findings for contracts or for any part of such authority. (Reference (a))
Contracting Officer Representative (COR)	A Government employee, military or civilian, designated in writing by a contracting officer to act as his or her representative to assist in administering a contract. No other person is authorized to use the title COR or other similar title (such as contracting officer's technical representative) that would imply authority to act for the

	contracting officer or the Government in dealing with the contractor. (Reference (b))
Cost Accumulation Framework	Set of policies, procedures, internal controls, and systems that integrate the processes of planning, acquisition, purchasing, and funds execution to effectively identify, account for, track, and support all NGA programmatic expenditures. (Definition created by NGA for NGA purposes only.)
Depreciation	Method used to spread the total cost of a tangible capital asset, less residual value, over an asset's useful life. Annual depreciation cost is computed by dividing the depreciable basis (acquisition cost plus capital improvements less residual value) by the useful life of the asset. (Reference (i h))
Due-In	The Due-In process begins when an asset Due-In record is created in the PeopleSoft Asset Management and ends when the asset is received. Due-In records are automatically created for Financial Records with a Capital WAG in PeopleSoft Asset Management, via an automatic interface with Purchase Request Information System (PRISM).
Electronic Waste	Electronic devices and information technology equipment, media, and memory that has reached the end of its useful life used in sensitive or classified environments within the Intelligence Community, and must be disposed of through sanitization or destruction techniques. (Reference (p y))
End Item	A final combination of end products or a component part that is ready for its intended use, e.g. server, laptop.
Equipment	Personal property that is functionally complete for its intended purpose, durable, and nonexpendable. Equipment generally has an expected service life of two years or more; is not intended for sale; does not ordinarily lose its identity or become a component part of another article when put into use; and has been acquired or constructed with the intention of being used. (Reference (d e))
Financial Liability	The statutory obligation of an individual to reimburse the government for lost, damaged, or destroyed government

	property as a result of negligence or abuse. (Reference (g h))
Full Cost	A baseline value that includes all material costs incurred to acquire and bring the property to a form and location suitable for its intended use and, as applicable, depreciated over its useful life. (Reference (d e))
GEOINT	The exploitation and analysis of imagery and geospatial information to describe, assess, and visually depict physical features and geographically referenced activities on the earth. Geospatial intelligence consists of imagery, imagery intelligence, and geospatial information. (Section 467 of title 10, United States Code (USC))
Government Furnished Property (GFP)	Property in the possession of, or directly acquired by, the government and subsequently furnished to the contractor, including sub-contractors and alternate locations, for performance of a contract. GFP in the context of this issuance includes equipment, special tools, and special test equipment. It does not include consumable or material items or items held as inventory as defined by DoD 7000.14-R. (Reference (d e))
Heritage Assets	Property, plant, and equipment (PP&E) of historical, natural, cultural, educational, or artistic significance (e.g., aesthetic) or with significant architectural characteristics. Heritage assets are expected to be preserved. Heritage assets consist of items whose physical properties resemble those of general PP&E and are traditionally capitalized in commercial-type financial statements. The nature of these items, however, differ from general PP&E in that their values may be indeterminable or may have little financial meaning (e.g., museum collections, monuments, assets acquired in the formation of the nation), or in that allocating the cost of such assets (e.g., weapons systems) to accounting periods that benefit from the ownership of such assets is not meaningful. (Reference (d e))
Internal Controls	The organization, policies, and procedures that help program and financial managers to achieve results and safeguard the integrity of their programs by reducing the risk of adverse activities. (Reference (e f))

Inventory Adjustment	Changes made to the accountable property record when the record and a physical count do not agree. All such changes require specific approval and documentation to support the adjustment, normally to include the results of reconciliation efforts to determine and resolve the cause of such disagreement, or a completed evaluation and investigation for lost, damaged, destroyed, or stolen property. (Reference (d e))
Accountable Property System of Record (APSR)	The government system used to control and manage accountable property records. A subset of existing organizational processes related to the lifecycle management of property; the system that is integrated with the core financial system. (Reference (d e))
Personal Property	All property (systems and equipment, materials, and supplies) except real property (land and improvements to facilities), and records of the Federal Government. (Reference (d e))
Physical Count	The process of physically counting the item(s) in order to verify the accountable property record's posted balance. Physical counts may be performed using AIT. (Reference (d e))
Physical Inventory	The verification of property existence, accountable property record completion, location, and quantity. The process may also involve verifying additional information, performing reconciliations, and modifying the accountable property records. (Reference (d e))
Program Asset Manager (PAM)	The PAM is responsible for a specific program and accepts custodial responsibility for the assets associated with the program. The PAM may also appoint AC to manage these assets. (Definition created by NGA for NGA purposes only)
Program Manager	An individual responsible for the overall procurement, development, integration, modification, operation, maintenance, and disposal of an IS (as well as the system components), including development and provision of the SP. (Definition created by NGA for NGA purposes only)
Property Loss	Unintended, unforeseen, or accidental loss, damage or destruction to government property that reduces the government's expected economic benefits of the property. Loss does not include purposeful destructive testing,

obsolescence, normal wear and tear, or manufacturing defects. Loss includes, but is not limited to, items that cannot be found after a reasonable search, theft, damage resulting in unexpected harm to property requiring repair to restore the item to usable condition, or destruction resulting from incidents that render the item useless for its intended purpose or beyond economical repair. (Reference (d e))

Property Management	A monitoring and control function, charged with assuring that organization processes related to the lifecycle of property support organization objectives, represent sound business practice, and are compliant with applicable standards, policies, regulations, and contractual requirements. The system of acquiring, maintaining, using, and disposing of the personal property of an organization or entity. (Reference (d e))
Property in the Possession of Contractors (PIPC)	Property to which the Government has title, is in the possession of a contractor or subcontractor for the use in contract performance, and is managed in the NGA TAM system. (Reference (a))
Real Property	Lands, buildings, structures, utilities, systems, improvements, and appurtenances thereto. Includes equipment attached to and made part of buildings and structures (such as heating systems) but not movable equipment (such as plant equipment). (Definition created by NGA for NGA purposes only)
Receipt	A transmission or other acknowledgment made by a receiving entity to indicate that a message, good, or service has been satisfactorily received. Receipt is often denoted by signing a situation specific form, such as DD Forms 250, 1149, "Requisition and Invoice/Shipping Document," or 1348-1A, "Issue Release/Receipt Document." (Reference (d e))
Reconciliation	The process of aligning the physical count with the quantity posted to the accountable property records, researching discrepancies, and determining inventory accuracy, i.e., calculation of loss or overage rates. (Reference (d e))
Sanitization	The cleansing or purging of all sensitive or classified data from property. (Definition created by NGA for NGA purposes only.)

Scrap	Property that has no value except for its basic metallic, mineral, or organic content. (Reference (d e))
Stewardship Responsibility	The requirement placed on an organization or individual who acts as the custodian of another individual's property by controlling, supervising, and managing the property in their care. (Reference (d e))
Total Asset Management (TAM)	A group of federated systems to produce an enterprise-level asset management capability and supporting processes associated with asset management. The TAM system is anchored by NGA's PeopleSoft Asset Management System, which is NGA's APSR, and includes the CMDB Remedy for IT process and change management; XACTA for security documentation; Computerized Maintenance Management System (Archibus) for facilities management; Flexara for software accountability; PRISM for contract management, and GEO-F for financial management. Together, these systems support the acquire-to-retire lifecycle for the effective and efficient management of all NGA assets. Assets must be acquired, managed, and retired through the APSR and be supported by documentation suitable for successful financial audit that establishes government ownership, acquisition cost, current value, in service or title transfer date, and other customary audit features. Assets may be managed in other corporate systems, but the data must be discoverable and interoperable within the APSR. (Definition created by NGA for NGA purposes only.)
Valuation	The act of determining or estimating the monetary worth and assigning that number to the item. (Reference (d e))
