

Statement of Need

For

60 MXS/MXMTW

60th Maintenance Squadron/Wheel & Tire has a requirement to assemble multiple types of aircraft wheels to include C-17, C-5 and KC-46 main and nose wheel assemblies. To perform this task, we use a tilt cylinder wheel build-up stand paired with a twin-spindle torquing system meant for aircraft wheel assemblies. The current torque system is inoperative and requires upgrade due to replacement parts being unavailable. The wheel build-up stand in use has come to its end of life and requires replacement/upgrade. With this new unit matched side by side with our other replacement system Wheel & Tire's production could increase exponentially. Additionally, this unit would act as a fail safe if the other unit once again went down for an extended period, allowing us to still maintain production standards, reducing the chances of any supply chain delay.

POC: TSgt Zavaien McBride & SSgt Raygene Ladia

The contractor shall provide the following:

1. Equipment.

1.1 Contractor shall deliver, install, and provide training within 120 days after contract award.

1.2 Contractor will deliver to 269 Ellis Rd. Travis AFB CA, 94535

1.3 Bauer Model 8071 Wheel Build-Up and Bauer Model 8731 Wheel Assembly Torque System

1.3.1 **Products** must meet the following specifications:

Torque system must be adjustable to simultaneously torque two nuts on any given wheel. Must have an accuracy of 2% at max torque and 1deg of torque angle, with a torque range of 45-225 ft/lbs. Build stand must be able to lift and align wheel with torque system. It must be adjustable to accept wheel diameters from 16" to 24" and tire diameters from 37" to 50".

2. Training

2.1 Must include end-user manual with operational instructions for device.

2.2 Must provide on-site installation and training services.

3. Equipment warranty (1 year standard) must be included

4. Point of Contact after contract is awarded: TSgt Zavaien McBride & SSgt Raygene Ladia at 60 MXS/MXMTW at 707-424-2164.
