Annex A: IC ITE Services and Providers

REVISION SUMMARY

<i>Version</i>	<i>Revision Date</i>	<i>Revision Summary</i>
1	2/26/2016	Initial Release
4-5	9/30/2016	No change
5.2	5/31/2018	Added DSA

Annex A: IC ITE Services and Providers

1.0 Introduction

The purpose of Annex A is to identify the IC ITE services available to support the development of NGA systems and services. IC ITE services are enterprise capabilities common to the Intelligence Community.

2.0 Guidance

Guidance: *In accordance with DNI¹ and NGA² guidance, geospatial service providers and their developers shall familiarize themselves with IC ITE service offerings and strive to use or apply those services in lieu of acquiring or developing similar offerings.*

The DNI has designated organizations as "Service Providers", who assume the responsibility of providing specific IT capabilities for the Community as a whole, they are:

- Data Services Architecture (DSA) - CIA & NSA
- IC Applications Mall (AppsMall) - NSA
- IC Cloud – CIA (C2S) & NSA (IC GovCloud)
- IC Desktop Environment (IC DTE) – DIA & NGA
- IC Enterprise Management (IC EMT) – DIA & NGA
- IC Security Coordination Center (IC SCC) - ODNI³
- Identification, Authentication and Authorization (IAA) – CIA & NSA
- Information Transport Service (ITS) - NSA
- Network Requirements and Engineering (NRE) - NRO

Information about each of these common IC ITE services can be found at:

<https://intelshare.intelink.ic.gov/sites/odni/cio/Pages/Services-and-Projects.aspx>

The service provider model provides the IC benefits by reducing duplicative efforts, improved resource allocation and collaboration, enhanced enterprise management and scalability, and service level agreements on behalf of the Community.

In addition, [Application Development Services \(ADV\)](#) provides common open-source tools and services for IC developers within the Community. The [IC Marketplace](#) provides a means to subscribe to and deploy AWS-billable C2S commercial software. [GEOINT Services](#) provides geospatial-centric mission, developer and DevOps tools. Developers are afforded access to tools, references and libraries on JWICS that are in-sync with commonly used low-side development tools and services.

¹ [Managing the IC Information Environment, ICD 121](#) and [IC Services Acquisition, ICS 801.4](#)

² [NGA Acquisition Strategy, October 2016](#)

³ ODNI is acting as the IC SCC service provider.
