

SPECIAL NOTICE:

**DELPHI: DEVELOPING SELF-MONITORING ECOSYSTEMS TO
“KNOW THYSELF”**

NOTICE OF PROPOSERS’ DAY

ARPA-H-SN-26-151

ADVANCED RESEARCH PROJECTS AGENCY FOR HEALTH
RESILIENT SYSTEMS OFFICE

Special Notice (SN): ARPA-H-SN-26-151	
OPPORTUNITY	Delphi: Developing self-monitoring ecosystems to “know thyself”
EVENT	PROPOSERS’ DAY
EVENT DATE	March 27, 2026
REGISTRATION DEADLINE	March 25, 2026 12PM ET
REGISTRATION WEBSITE	https://solutions.arpa-h.gov/delphi
REGISTRATION POC	DELPHI@arpa-h.gov
TECHNICAL POC	Dr. Paul Sheehan, Program Manager, Resilient Systems Office

PROPOSERS’ DAY

The Advanced Research Projects Agency for Health (ARPA-H) is hosting a Proposers’ Day (PD) in support of a planned solicitation for the Delphi program. The Proposers’ Day will be held virtually and in-person on March 27th, 2026, from 8:00 AM to 5:00 PM Mountain Time (MT) in Tempe, Arizona. Advance registration is required (<https://solutions.arpa-h.gov/delphi>).

PROPOSERS’ DAY GOALS

1. Introduce the ARPA-H Delphi program goals and vision to the research community;
2. Clarify the logistics of an ARPA-H program generally as well as Delphi specific objectives and milestones;
3. Collect relevant questions which will be maintained on a frequently asked questions (FAQ) document at (<https://www.arpa-h.gov/explore-funding/programs/delphi/faqs>); and
4. Encourage and promote teaming arrangements among organizations that have relevant expertise, research facilities, and capabilities for executing research and development responsive to the ARPA-H Delphi program goals.

PROJECT OBJECTIVES

The Delphi Program vision is to empower all Americans to fully understand their own bodies with continuous monitoring of deep biological information – hormones, cytokines, and drug levels. Leveraging chipleets, a new system architecture in microelectronics, will greatly decrease cost, reduce size, weight, and power (SWaP), and enable all developers to access cutting edge capabilities. By the end, Delphi will quickly and cheaply develop modular wearable or ingestible sensors for monitoring a broad range of biological markers. The benefits include 1) early detection to prevent disease progression, 2) continuous monitoring for safe home recovery, and 3) precision, closed-loop monitoring of therapies for superior outcomes.

TECHNICAL APPROACH

The Delphi program comprises four technical areas (TAs):

- **TA1: “Dry” Chiplets unique to biosensing.** Determine a common packaging and interconnect strategy. Develop chiplets for ultra-low power management and for secure medical data transmission.
- **TA2: “Wet” Biosensing Chiplets.** Develop biology-facing sensors for detection of deep biological data that interfaces into the chiplet architecture. This will include not only improvements in biological recognition elements but new approaches for surface passivation that are compatible with clean room processing.
- **TA3: Biocompatible Encapsulation.** Develop hermetic encapsulation to seal integrated chiplet packages, exposing the “wet” sensing interface to the biological environment while preserving the “dry” chiplets from moisture ingress.
- **TA4: Human Factors Testing or Clinical Trial.** Based on the chosen track, assess whether the device can be used safely, effectively, and intuitively by intended users under realistic conditions, identifying and mitigating any use-related risks.

The Delphi program will be accomplished over 3 sequential program Phases. During Phase I (24 months), performers will conduct component and process development including wet and dry chiplet development. During Phase II (18 months), performers will integrate chiplets and validate functionality *in vivo*, while also developing any additional chiplets needed for the first remix. During Phase III (12 months), performers will scale for manufacturing, develop any chiplets needed for second remix, and conduct human factors testing or a human clinical trial. Performers will produce multiple biosensor chiplets across the three phases through remixes to ensure modularity and reusability of the ecosystem.

REGISTRATION INFORMATION

Participants must register in advance through the registration website (<https://solutions.arpa-h.gov/delphi>). Attendance will be in person or virtually. Registration for in-person or virtual attendance is free of charge. The registration deadline for the PD is 12:00 PM (noon) ET on March 25, 2026. No same-day registration will be allowed. In-person registration must be confirmed by ARPA-H. If demand exceeds venue capacity, organizations may be asked to limit in-person attendees, as determined by the ARPA-H Program Manager. Once in-person capacity is reached, registrants will be offered a link to attend virtually. All PD attendees (virtual and in-person) will receive an email with the webinar link after registering. This event is only open to registered participants and is closed to the general public. The event, particularly with regards to in-person participation, is intended for potential proposers, commercialization partners and other data, clinical trials and patient advocacy stakeholders. Any changes to the registration deadline will be posted at [SAM.gov](https://sam.gov).

EVENT FORMAT

The ARPA-H Delphi Proposers' Day will be an in-person/virtual hybrid event, hosted on March 27, 2026 in Tempe, Arizona.

The Delphi Proposers' Day will include presentations by ARPA-H, including technical presentations covering the Delphi program as well as informational sessions during which ARPA-H will respond to questions from participants. Question & Answer sessions will be held during the Delphi PD. Virtual and in-person Delphi PD participants are encouraged to use this time to discuss any Delphi program-related questions. ARPA-H will collect participants' questions and responses and make them available in the FAQ section of the Delphi website (<https://www.arpa-h.gov/explore-funding/programs/delphi/faqs>). Poster sessions (in-person only) will highlight current research efforts from potential proposers and foster potential teaming arrangements. Due to limited spots, registration does not guarantee a poster presentation. Confirmation of poster presentation will be sent by the Delphi team.

TEAMING PROFILES

Interested parties are invited to submit a 'teaming profile'. Teaming profiles will capture contact email addresses, physical location, the technical areas (TA), and two fields in 500 characters or less covering (1) "current research focus area", and (2) "what we seek in teaming partners". Respondents are encouraged to include: technical competencies, team capabilities, team composition, research areas of interest, unique facilities and other capabilities as they relate to the program, desired technical/other competencies sought from other potential team partners, and whether the potential proposer is interested in leading or contributing to a TA proposal.

All teaming profiles must be submitted via the Delphi Teaming Profile Form (<https://solutions.arpa-h.gov/Teaming/>). The teaming profile will be updated regularly and made available on the program's teaming profile site: <https://www.arpa-h.gov/explore-funding/programs/Delphi/teaming>. Specific content, communications, networking, and team formation are the sole responsibility of participants. ARPA-H does not endorse any participating organization nor exercise any responsibility for improper dissemination of the team profiles.

ADMINISTRATIVE

All administrative and technical questions regarding the ARPA-H Delphi Proposers' Day event should be directed to DELPHI@arpa-h.gov. Please refer to the Proposers' Day Special Notice number (ARPA-H-SN-26-151) in all correspondence.

This SN is issued solely for information and potential new program planning purposes; the SN does not constitute a formal solicitation for proposals or solution summaries. Responses to this notice are not offers and cannot be accepted by the Government to form a binding award. Submission of any information in response to the SN is voluntary and is not required to propose to the Delphi ISO.

Attendance is voluntary; not attending the Proposers' Day does not preclude a potential proposer from submitting a solution summary. Attendees are not required to submit a proposal to any of the ARPA-H Delphi announcements and solicitations that will follow this

special notice and the Proposers' Day meeting. ARPA-H will not provide reimbursement for any costs incurred in responding to this SN or travel and lodging expenses incurred for the in-person participation at the Proposer's Day meeting. Potential proposers are advised that ARPA-H is under no obligation to acknowledge receipt of the information received or provide feedback to respondents with respect to any information submitted under this SN.
