

SALIENT CHARACTERISTICS

- The vendor will provide a biometrics collection kit that is lightweight, modular, Android-based device capable of collecting multimodal biometrics (fingerprint, face, iris) via a two-finger fingerprint sensor, single iris camera, and smartphone camera for face capture.
- The system must connect to the Ares Gateway Transaction Manager (AGTM) software. Ares Gateway allows for the integrating, discovering, analyzing, and dissemination of biometric identity information which is critical to AFOSI for criminal and counterintelligence missions.
- The vendor will provide a biometrics collection system that utilizes the ARES Mobile Biometric Application (AMBA).
- The vendor will maintain a full-service warranty on the biometrics kits in-line with those currently in use by AFOSI.
- The vendor must be able to provide training (in at least a virtual capacity) on the field-level utilization of the biometrics system and associated software to the local OSI Detachment personnel
- The vendor must encompass integration for ready solutions, LSI services, and includes a Service Desk portal and license for ARES Mobile. This allows for logging issue tickets, RMAs, and provides 24/7 access to view status updates.

Hardware in each kit should include at minimum:

1 Pelican Case w/custom-cut foam
1 Samsung Galaxy S23 - 128 GB (or better device)
1 Sensor Module – BLK (i.e. Javelin+ sensor module)
1 Sensor Module Component - MO2121 - Module Single Iris Capture MO2121
1 Sensor Module Component - Sherlock Fingerprint Sensor SH21100-000
1 Sensor Module Component - Sherlock Molex Cable SHCA1MM-015

1 Sensor Module Component - MO2121 - Module Single Iris Capture
1 Sensor Module Component - Sherlock Fingerprint Sensor
1 Sensor Module Component - Sherlock Molex Cable

1 OPRTR.S23 Phone Case
1 Samsung Fast Charger USB-C
1 Mount, Vehicle, Inductive Charger
International Travel Wall Charger
Microfiber Cleaning Cloth - 7" x 6"
Ares Mobile Biometric Application
O&M - Ares Mobile Biometric Application
Operations & Maintenance (O&M) includes:

Software updates and patches
General Ares software support

Software should include:

- The ARES Mobile Biometric Application (AMBA) and applicable initial licensing for the associated devices.
- Features of AMBA include:
 - Android-based software for the Javelin line of products.
 - Collects, validates, and submits biometric transactions for near-real-time responses against local and national biometric repositories.
 - On-board matching of fingerprint, face, and iris.
 - Samsung Knox™ mobile device management (MDM) for managing devices with a high level of security.
 - Send submissions and receive/view biometric responses from multiple agencies.
 - On FBI approved list for mobile identification, mobile booking, and live scan.
 - Software settings and configurations can be centrally managed by the Ares Gateway Transaction Manager.
 - Create EBTS spec compliant enrollment and search transactions.
 - Submit transactions over Wi-Fi and cellular networks to local and national repositories.
 - Collections stored when operating in a disconnected environment can be automatically transmitted when reconnected.
- FABIS Facial Identification software
