

F3G5GA6013A003 – Automated Flight Scheduling Software

Attachment 1 – Software Description and Capabilities

The 26th Weapons Squadron (26 WPS) is requesting a Scheduling Software License similar or equal to **Sky 2.0 Automated Flight Scheduling Software**.

The Contractor shall provide Sky 2.0 Automated Flight Scheduling Software, including one year of software licensing, IL5 cloud hosting, customer support, and required customizations for the 26 WPS Squadron. The scope includes software development, and data gathering to support operational scheduling requirements.

Capabilities include rule definition and management, disruption test case handling, and syllabus flow support for all syllabi in accordance with the approved Training Plan.

The Contractor shall customize the platform to support MQ-9 seat positions and longer-duration missions with multiple crew swaps throughout a mission.

The system shall automatically build schedules to ensure pilot flight and ground currency compliance and minimum readiness aircrew program requirements within maximum duty day limitations. End users shall be able to update existing rule sets, add new rules, and apply Director of Operations prioritization.

The system shall support automated schedule reflow in response to disruptions, including SNP and Instructor Pilot unavailability.

Operational readiness analytics shall include comparison against RTM benchmarks and prediction of future deficits in critical assets.

The Contractor shall provide 24/7 technical support.

The contractor shall deliver and implement **Sky 2.0 Automated Flight Scheduling Software** no later than 31 May 2026.
