

STATEMENT OF NEED – Terrestrial Lidar

National Geodetic Survey

1. Introduction/Background: The National Oceanic and Atmospheric Administration (NOAA) is congressionally mandated to survey the National Shoreline. Technologies used by NOAA's National Ocean Service (NOS) for shoreline mapping employ remote sensing techniques which include airborne topographic lidar. The RIEGL Lidar systems are terrestrial scanners which provide high-fidelity ground truth in complex coastal areas, allowing every lidar point to be tied directly to the National Spatial Reference System, improving absolute horizontal and vertical accuracy and creating products defensible for engineering and scientific use.

2. Scope of Work:

RIEGL Terrestrial Lidar equipment as specified below which includes a 3-day training course as well as a 3-day training course on-site upgrade for each component (VZ-2000i and the VZ600i). Additionally, the supplier provides a twelve (12) month warranty on all equipment and parts supplied.
