

PAO CHILLER SYSTEM QUESTIONS AND ANSWERS

04/29/2026

1. QUESTION: "Is there any way we could get more information as to what equipment we would be trying to repair the communication on for this - Sources Sought - Polyalphaolefin (PAO) chillers and remote manifolds diagnosis and repair? For a repair tech to be able to figure out if we are "subject matter experts" as the SOW calls out, we kind of need to know what equipment we would be dealing with."

ANSWER: The remote manifolds communicate via fiber optics, there are also some ethernet connections inside the PAO Chillers that may need to be checked. Contractors usually bring a laptop and connect it via ethernet port so they can run diagnostics, make adjustments, check fault codes, and make adjustments to the Chiller as needed.
