

UNITED STATES INDO-PACIFIC COMMAND INSTRUCTION 6490.03

FOOD AND WATER RISK ASSESSMENTS WITHIN THE UNITED STATES INDO-PACIFIC COMMAND

Originating Component: J07 (Command Surgeon)

Effective: October 1, 2025

Releasability: Cleared for public release. Available on the USINDOPACOM Instructions Secret Internet Protocol Router Network Portal page at:
<http://psp.hq.pacom.smil.mil/sites/bridge/j02/j021/PACOM%20Instructions/Forms/Cool%20View.aspx>.

Approved by: Joel L. Carey, Major General, USAF, Chief of Staff, USINDOPACOM

Purpose: In accordance with DoD Instruction (DoDI) 6490.03, this issuance establishes policy and assigns responsibilities to coordinate and provide effective oversight for Food and Water Risk Assessment (FWRA) within the U.S. Indo-Pacific Command (USINDOPACOM) Area of Responsibility (AOR).

SECTION 1: GENERAL ISSUANCE INFORMATION

1.1. APPLICABILITY.

This issuance applies to Headquarters, USINDOPACOM, Service Component Commands, Sub-Unified Commands, and Direct Reporting Units, collectively referred to within as components. Components will ensure that all forces assigned or attached to or under the Combatant Command or the operational control of a component or subordinate command of the component comply with this instruction when those commands are conducting, supporting, or participating in exercises or events where food or water is contracted for consumption by U.S. Service members within the USINDOPACOM AOR.

1.2. POLICY.

a. All Food and Water Risk Assessments (FWRAs) conducted in USINDOPACOM will follow the guidance in MIL-STD 3041A and MIL-HDBK-3041A.

b. FWRA's conducted in the USINDOPACOM AOR will be captured in the Veterinary Services Information Management System (VSIMS) FWRA database program of record, regardless of which component conducted them. Documentation of FWRA's allows for a systematic review of the risks associated with consuming locally procured food and water in each country or region, and allows for better planning to support future exercises, operations, and other activities with regards to operational public health and troop feeding option.

c. The following personnel are authorized to attend the 40-hour FWRA course and conduct FWRA's: Army Veterinary Corps Officers (64 series), Food Safety Warrant Officers (640A), Army Environmental Science and Engineering Officers (72D), Air Force Biomedical Specialist Public Health Officers (43HX), and Navy Environmental Health Officers (NOBC 1860).

SECTION 2: RESPONSIBILITIES

2.1. USINDOPACOM J07. The J07 delegates strategic oversight of the FWRA program for the USINDOPACOM components to the USARPAC Assistant Chief of Staff- Medical (ACSMED) Directorate.

2.2. USARPAC-ACSMED DIRECTORATE. The USARPAC-ACSMED Directorate will appoint a USINDOPACOM FWRA Manager, typically the Command Veterinarian.

2.3. INDOPACOM FWRA MANAGER. The USINDOPACOM FWRA Manager will:

- a. Liaison with FWRA program and database managers at the Defense Health Agency (DHA).
- b. Maintain a FWRA email distro list (currently usarmy.shafter.usarpac.list.acsmmed-fwra@army.mil) for ease of communication.
- c. Grant access for certified assessors into the USINDOPACOM FWRA database in VSIMS.
- d. Ensure all assessors complete FWRA checklist, cover memorandum, and after-action report IAW MIL-STD 3041A and this policy.
- e. Maintain a roster of certified personnel within USINDOPACOM based on the DHA FWRA program manager's VSIMS application.
- f. Assist component FWRA Coordinators with sourcing when a unit from any Service does not have trained assessors available.
- g. Input submitted Assessment Instruction Memo (AIM) (Figure 1) into VSIMS and create FWRA checklist for completion by the tasked assessor.
- h. Serve as the Combatant Command (CCMD) level review authority, approving and accepting all final USINDOPACOM FWRA reports.

2.4. SERVICE COMPONENT COMMANDERS. The Component Commanders will appoint a component FWRA Coordinator to manage component FWRAs and to liaise with the USINDOPACOM FWRA Manager.

2.5. FWRA COORDINATORS. Component FWRA Coordinators will:

- a. Identify when an assessment is required to be conducted by their component and source trained personnel if available. If trained personnel are not available from the component, coordinate with the USINDOPACOM FWRA Manager to source trained personnel. See Section 3.2 for details on how to request a FWRA. See Section 3.3 for details on funding.
- b. Ensure assigned assessors coordinate with the mission planners and contracting officers assigned for each exercise and/or FWRA.

c. Liaise with the USINDOPACOM FWRA Manager as needed to efficiently execute FWRA program.

2.6. PUBLIC HEALTH COMMAND-PACIFIC (PHC-P). PHC-P will:

a. Coordinate the FWRA Mobile Training Team (MTT) Course through the U.S. Army Medical Center of Excellence (MEDCoE) on an as-needed basis and as funding allows.

b. Grant access for certified assessors into the VSIMS USINDOPACOM FWRA database.

c. Perform FWRAs when tasked IAW MOA between USARPAC and U.S. Army Medical Readiness Command, Pacific (MRC-P).

d. Serve as primary point of contact to input submitted AIM into VSIMS and create FWRA checklist for completion by the tasked assessor.

e. Serve as the technical review authority, performing initial review of all FWRA reports. Return reports to assessors if corrections are required. For returned assessments, PHC-P personnel will mentor assessors to improve the quality of reports. If no corrections are identified, submit for CCMD-level review and approval.

f. Ensure assessors complete the FWRA checklist, cover memorandum, and after-action report IAW MIL-STD 3041A and this policy.

g. Liaison with FWRA program and database managers at DHA and USARPAC-ACSMED FWRA Coordinator.

SECTION 3: PROCEDURES

3.1. GENERAL.

a. FWRA's are a pre-deployment health risk assessment performed on hotels, restaurants, caterers, host nation military dining facilities, and other food facilities being evaluated as a source of contracted food for U.S. Forces. Per USINDOPACOM FHP Guidance, FWRA's will be conducted for all USINDOPACOM and component deployments where Service members will consume contracted, locally procured food (including water and ice). The mission commander will receive the initial risk, mitigation strategies, and residual risk for the assessed findings at each facility. This helps the exercise commander better evaluate the risks associated with potential dining options. The mission commander must assume the risk associated with consuming locally procured food, water, and/or ice if they choose to contract locally procured food instead of utilizing approved sources.

b. Conducting a FWRA is not a substitute for a Food Protection Audit. Facilities assessed during FWRA's are not added to the Worldwide Directory of Sanitarily Approved Food Establishments for Armed Forces Procurement and cannot be utilized as Approved Sources by procurement agencies.

c. FWRA's are valid for six months or the duration of the activity-whichever is shorter. Assessors should review the database for previous assessments conducted on facilities in preparation for their own assessment. To further minimize risk, transition to feeding troops from DoD Approved Sources should be considered for longer operations.

d. Complete utilization of DoD Approved Sources for feeding U.S. Forces precludes the need for a FWRA. Use of U.S. military mobile or field kitchens with product from approved vendors of the DLA Prime Vendor Program also precludes the need for a FWRA. Different types of occupational and environmental health site assessments (OEHSAs) are appropriate in these circumstances.

e. Shipboard operations that are not anticipated to involve operations ashore are exempt from FWRA requirements.

3.2. REQUESTING A FWRA.

a. As soon as exercise locations and troop feeding plans are identified for a particular operation/exercise/event, the unit must determine if a FWRA may be required.

b. If FWRA's are required, the unit will determine if a qualified, trained assessor is available from their own unit.

(1) If none are available, the unit will request support from their Service Component Surgeon.

(2) If support is not available from the Service Component, the Service Component Surgeon or designee will request joint support through the USINDOPACOM FWRA Manager

(usarmy.shafter.usarpac.list/acsmed-fwra@army.mil). Requestors should be prepared to aid the assessor for base access, interpreter support, transportation, and local coordination with the facility, etc.

(a) If the unit requires external support from USARPAC for FWRA execution, the Service Component Surgeon or designee will request support via the FWRA distribution email list at least eight weeks prior to required execution.

(b) When assistance is requested, the following information should be provided:

1. Name of unit requesting,
2. Event to be supported,
3. Location of facilities to be assessed, and
4. Desired date for assessment.

c. For questions on FWRA requirements or request procedures, contact your component surgeon office or reach out to USARPAC FWRA Coordinator via the FWRA email distro list.

3.3. FUNDING.

a. Funding for the FWRA is the responsibility of the unit responsible for funding the exercise, deployment, or event.

b. If the FWRA will occur in conjunction with another mission, such as a food protection audit, the responsible unit will fund only that part of the mission specific to the FWRA.

3.4. CONDUCTING THE FWRA.

a. To the maximum extent possible, newly trained assessors should accompany an experienced assessor on at least two FWRAs. When possible, the new assessor will observe one FWRA and conduct the second FWRA under supervision.

b. The assessor's chain of command approves travel for FWRAs using Travel Tracker and Individual Antiterrorism Plan (TT/IATP) in addition to the Aircraft and Personnel Automated Clearance System (APACS). The assessor contacts the requesting unit for additional support upon tasking for the FWRA.

c. Not less than fifteen days prior to conducting the FWRA, assessors will verify they have access to the VSIMS FWRA database (<https://isph.health.mil>). If a VSIMS account is required, the assessor may contact the VSIMS support through the "Contact Us" link from the VSIMS App Portal or email usarmy.jbsa.medcom.mbx.medcom-vsims@health.mil. In addition, the assessor will verify their inclusion in the FWRA Assessors USINDOPACOM group on VSIMS. To request being added to the group, VSIMS account holders will send an email to the ACSMED FWRA distro.

d. Not less than five working days prior to conducting the FWRA, the assessor will send a completed AIM worksheet for each facility to be assessed to the USARPAC FWRA email.

e. Prior to conducting the FWRA, the assessor must review the MIL-HDBK-3041A.

f. Assessors should review the database for previous assessments conducted on facilities they will assess.

g. The FWRA Checklist will be used to assess each facility. An example of the FWRA checklist can be found in MIL-HDBK-3041A. To the extent possible, the food facility should be in operation during the FWRA. The assessor should include as much of the following in their assessment as possible: food delivery, food preparation and cooking, serving line operation, foods to exclude, and clean-up. For items with an initial risk level of high or extremely high, the product to be excluded if risk not mitigated must be listed.

h. Step III Remarks of the FWRA checklist must include information listed below.

(1) Administrative

(a) Name of event or exercise that the FWRA supports.

(b) Hours of operation for food service, capacity limits, number of food employees, health physical frequencies, and background checks

(c) Third party audits/inspection: name of audit/ inspection group, frequency, date, and results of last inspection.

(d) Water and ice testing: Areas assessor tested and results.

(e) Food suppliers: List of location for food supplies. Is it a reputable source?

(f) Food safety plan: Is there one in place? If yes, briefly describe.

(2) Moderate Risk Items: List the Significant Initial Risk (SIR), describe the SIR, and describe the mitigation strategy.

i. Public drinking water in many USINDOPACOM locations is considered non-potable due to a lack of residual disinfectant and inability to assess the host nation water infrastructure. Assessors should take this into account during the FWRA.

j. During the FWRA, the assessor should discuss areas posing food safety risk with the facility manager. Where possible, the assessor should seek buy-in from the facility on mitigation strategies. The assessor should also notify the facility manager of any food items that will be recommended for exclusion from U.S. Forces feeding plan.

3.5. REPORTING FWRA RESULTS.

a. Copies of FWRA reports and assessment outcomes are NOT provided to the assessed facilities.

b. If U.S. Forces are present at the location, the assessor should brief the Operational Commander, or other responsible individual, and the Contracting Officer and/or Contracting Officer Representative before departing. If these individuals are not available at the location, they should be briefed at the first opportunity. The briefing should clearly convey the initial health risk level, mitigation recommendations, and the residual foodborne illness health risk assessment information.

c. Use of the FWRA database is mandatory, except for Special Operations Command, Pacific or classified missions. Assessors are given access to the database during the FWRA training course and added to the USINDOPACOM assessor list upon request. If the database is not accessible during the FWRA trip, FWRA reports will be entered no later than five business days after returning to home station.

d. The assessor will prepare a cover memorandum using the template provided in Figure 2. The template provides examples of the type of information that must be provided to the Operational Commander and other responsible parties but is not all-inclusive and should be modified as needed. Content may be added, but the cover memorandum must include all information in the template. If more than one facility was assessed in each location, each should be rank ordered according to risk. Even if one facility is assessed, the assessor will prepare a cover memorandum with the required information.

e. In addition to the cover memorandum, the assessor will produce an After-Action Report (AAR) as shown in Figure 3. Both the cover memorandum and AAR will be uploaded into VSIMS and associated with the appropriate checklists.

f. Acceptance of any risk identified during the FWRA is strictly a Command function. The POC receiving the final report must ensure that the relevant Commander receives the report and cover memorandum.

g. As part of the “deployment health activities” as described in DoD Instruction 6490.03, Commanders (or their designated representatives) should confirm that the risk mitigation strategies identified in the FWRA have been implemented by the food facility. This may be accomplished by ensuring that preventive medicine, public health, or veterinary services personnel are present during the event execution to oversee food preparation operations and service.

20 FEB 2025

MEMORANDUM FOR Exercise Planners and Contracting Representatives for High Speed 2025

SUBJECT: Food and Water Risk Assessments for High Speed 2025

1. Food and Water Risk Assessments (FWRAs) were conducted on three facilities in (location) (date) by CPT Stay Ready in support of High Speed 2025.
2. FWRA's determine the level of risk for US personnel consuming food and water from the assessed establishments. Facilities are ranked below from lowest to highest risk based on observations and water testing. Residual risk can only be achieved with mitigation steps discussed with the facility management. If the mitigation strategies are not adhered to, the initial risk remains the same. It is recommended that these mitigation strategies be discussed with facility representatives as part of the contracting process to ensure the measures are incorporated prior to the event. It is also recommended that the mitigation strategies be monitored by military Preventive Medicine or Veterinary Service personnel during the event.

<u>Facility Name</u>	<u>Date Assessed</u>	<u>Initial Risk</u>	<u>Residual Risk</u>	<u>Overall Ranking</u>
FSV Café	12 FEB 2025	Moderate	Low	1
Michelle's Diner	13 FEB 2025	Moderate	Moderate	2
Delphi Catering	13 FEB 2025	High	Moderate	3

3. Mitigation strategies for all facilities.

a. Sanitize food-contact surfaces, dishes, and equipment prior to use with 100 parts per million (ppm) with non-scented bleach solution (1 tbsp. bleach for every 2 gallons of water).

b. Ensure proper cooking times and temperatures. Chicken and egg products must be cooked to an internal meat temperature of 165°F for 15 seconds, beef and fish to 145°F for 15 seconds, and pork to 160°F. All other products should be cooked to 165°F.

c. Maintain proper holding temperatures. Hot foods are maintained above 140°F after cooking and during serving. Cold foods must always be maintained at or below 40°F.

MCCC-RR

SUBJECT: Food and Water Risk Assessments for High Speed 2025

d. Ensure kitchen personnel are washing hands after handling raw foods and before handling finished foods with a minimum of disinfected, nonpotable water.

e. Avoid cross-contamination. Ensure raw meats are processed (cut up, seasoned, etc.) in a different area than finished foods and with different equipment.

4. The table below lists the additional mitigation strategies necessary at each facility. The following mitigation strategies would lower the initial risk to the residual risk. These procedures should be supervised by preventive medicine or veterinary personnel.

Facility	Summary of mitigation strategies
FSV Cafe	Water samples were taken from the sink where fresh fruits and vegetables are washed. Water was positive for coliform but negative for <i>E. coli</i> . However, once the filters were removed from the sink, the water was negative. The PIC said he would add cleaning and sanitizing water filters to the cleaning checklist. Water samples should be taken at the time of food preparation.
Michelle's Diner	<u>Dry storage</u> : Ensure there is at least six inches of space between the items being stored, especially food and the wall or floor. <u>Juice</u> : Use only pasteurized juice. <u>Product labeling</u> : Label items with date and time either finished preparing if cooked product or placed in frig if raw product.
Delphi Catering	<u>Pest control issue</u> : Roof and doors do not completely seal. Thoroughly clean the entire kitchen removing all rodent droppings. Hire a certified pest control company to service the restaurant at least once a month. <u>Water</u> : Large water storage containers contain algae. The tanks are designed for chlorine to be added, but they are currently not using chlorine. <u>Refrigerators/freezers not maintaining temperature</u> : Have freezer and refrigerator maintenance to ensure they can maintain temperature.

5. Food allergens were not included in the scope of these assessments. All facilities should be considered extremely high risk for exercise attendees with food allergies.

6. Acceptance of final risk is the responsibility of the exercise commander. FWRAs are to be used as a tool to mitigate risk. They are not equal to formal food protection audits, and the facility will not be added to the *Worldwide Directory for Sanitarily Approved Sources* for future exercises or events held at this location. Each FWRA is good for six months.

7. Questions regarding these assessments should be directed to the undersigned at (808) 555-5555 or by email stay.ready.mil@army.mil.

MEMORANDUM FOR Record

SUBJECT: Food and Water Risk Assessment AAR, High Speed 2025

1. Purpose: To perform Food and Water Risk Assessment (FWRAs) in facilities in (location) in support of High Speed 2025.

2. Dates: 11 February – 15 February 2025

- a. FSV Café: 12 February 2025
- b. Michelle's Diner: 13 February 2025
- c. Delphi Catering: 14 February 2025

3. Personnel:

- a. CPT Stay Ready (primary assessor), PHC-Everywhere
- b. CW2 Safety First (staff assessor), 109th MDVSS
- c. MAJ Right Now (Contracting Officer), 413th Contracting Support Brigade

4. Summary of TDY:

Provide a summary of the TDY, including any issues encounters and information future assessors may need.

5. Follow Up Actions:

a. FWRA: All checklists completed and submitted in VSIMS. Cover memorandum completed and uploaded in VSIMS. AAR will be completed, uploaded in VSIMS (with cover memorandum) and attached to the appropriate assessments.

b. Appropriate exercise planner/Commander and Contracting Officer were briefed the initial risk, residual risk, and mitigation strategies for each facility assessed. The FWRA Checklists and cover memorandum were provided.

6. POC for this memorandum is the undersigned at (808) 555-5555 or by email stay.ready.mil@army.mil.

GLOSSARY

G.1. ACRONYMS.

ACRONYM	MEANING
AAR	After-Action Report
ACSMED	Assistant Chief of Staff-Medical
AIM	Assessment Instruction Memo
AOR	Area of Responsibility
CCMD	Combatant Command
DHA	Defense Health Agency
DIRLAUTH	direct liaison authority
DoD	Department of Defense
FWRA	Food and Water Risk Assessment
GPS	Global positioning system
OEHSA	Occupational and environmental health site assessment
PHC-P VSD	Public Health Command – Pacific Veterinary Service Directorate
POC	Point of contact
SME	Subject Matter Expert
TDY/TAD	Temporary duty travel/Temporary additional duty
USARPAC	United States Army Pacific
USINDOPACOM	United States Indo-Pacific Command
VSIMS	Veterinary Service Information Management System

G.2. DEFINITIONS.

Unless otherwise noted, these terms and their definitions are for the purpose of this issuance.

TERM	DEFINITION
assessor	A qualified and trained individual who conducts a FWRA, writes the report and associated documents, and routes final copies appropriately. Personnel authorized to perform FWRA are VCOs (64 Area of Concentration, 640 A (FSO), and a Doctor of Veterinary Medicine formally trained as a VCO), Army Environmental Science and Engineering Officers (ESEO – 72D), Navy Medical Department Officers with Navy officer billet code (NOBC) 1860, and Air Force Biomedical Specialist Public Health Officers (43HX). No enlisted personnel are authorized to conduct FWRA.
CCMD reviewer	The individual who provides the final review and acceptance of FWRA reports. The USARPAC-ACSMED FWRA Coordinator will perform this function within USINDOPACOM.
Deployment health activity	Health-related activities and measures that are undertaken to assess and minimize health risks associated with deployment. Activities encompass the regular collection, analysis, interpretation, recording, archiving, and distribution of health-related data used for monitoring the health of individuals or a deployed population, and for intervening in a timely manner to prevent, treat, or control the occurrence of disease or injury. Activities are described in the DHA deployment health procedural instruction and may include, but are not limited to, health risk assessment, health risk mitigation including feral animal risk mitigation, risk communications, medical countermeasures, health surveillance including OEH surveillance and, when appropriate, medical surveillance (e.g., applicable occupational medical surveillance or deployment-related health assessments), force health protection, safety and occupational health, personal protective equipment, sanitation and hygiene, integrated pest management, food protection, and food and water risk assessments.
Food protection audit	An in-depth examination of an establishment's policy and procedures to determine effectiveness and compliance as it applies to the protection of food. Food protection audits examine and evaluate the adequacy of a commercial establishment's food safety, food defense, and other applicable control systems. Audits are performed by U.S. Army VCOs to determine initial or continued listing as a DoD Approved Source in the Worldwide Directory of Sanitarily Approved Food Establishments for Armed Forces Procurement.
FWRA	An assessment conducted under specific circumstances by veterinary or public health personnel to assess food operations to identify and

mitigate risk from intentional and unintentional contamination. Circumstances under which an assessment is conducted include short term deployments, for deployed forces during initial entry deployment, and exercises and other short-term operations conducted outside the United States or its territories.

FWRA program

A program conducted under specific circumstances by veterinary or public health personnel to assess food operations to identify and mitigate risk from intentional and unintentional contamination. Circumstances under which an assessment is conducted include short-term deployments, initial entry of deployment, and exercises and other short-term operations conducted outside the United States or its territories.

Technical reviewer

A subject matter expert in food protection who provides the initial review of FWRA reports. For USINDOPACOM FWRAs, the primary technical reviewer will be the Public Health Command-Pacific FSO (640A) or their designated representative.
