

Q&A Pre Solicitation Synopsis

General Leonard Wood Community Hospital Shuttle Driver Service

1. Will fuel for the Government-owned shuttle vehicles be Government-furnished, or should offerors include fuel as a contractor cost?

Fuel will be government furnished from the government approved fuel source on post.

2. Can you clarify the maintenance and repair responsibility for the shuttle vehicles, including which items fall under Tab A versus Tab B of the incidental property attachment?

These are GSA vehicles. Maintenance and repair will fall under the standard GSA procedures and not be the responsibility of the contractor

3. Is a route map, a stop list, an estimated daily passenger volume, or trip frequency available for shuttle operations?

We have a route map and a tentative stop list. We are testing out the shuttle frequency and route times

4. For any unplanned or unannounced schedule changes, how much advance notice will normally be provided to the contractor?

Unplanned schedule changes generally only happen during inclement weather. As much notification as possible will be given.

5. Does the limitation of eight personnel apply only to active shuttle drivers, or does it also include supervisors, alternates, and personnel undergoing background checks or onboarding?

The 8 personnel limitation applies to the number of drivers that will be funded to undergo the background check/onboarding process. GLWCH will fund 8 personnel to hold background checks at any given time.

6. Are drivers expected only to operate the shuttles, or are they also expected to assist non-ambulatory passengers with boarding, wheelchair securement, or escort support?

Escorting is not required and only minimal assistance will be provided.

7. In the event of an accident or vehicle issue, please clarify the responsibilities for reporting, towing, providing a replacement vehicle, and maintaining service continuity.

These are GSA vehicles. Any accident notification will be in accordance with local reporting guidelines. Towing and/or replacing vehicles will be the responsibility of the government.

8. Are there any additional insurance requirements beyond the auto liability coverage identified in the draft PWS?

No

9. How will the Government evaluate the 100% fill-rate requirement in situations where delays are caused by Government-controlled onboarding, background checks, installation access, or vehicle availability?

Government controlled delays are not the fault of the contractor and cannot be held against them. The Government intends to fund up to 8 drivers to complete the background check process. Contractor is expected to furnish new driver's names for background checks as drivers leave so that there are always enough qualified drivers to render service.

10. What type of vans will be used

Will be ambulatory shuttles with 12-16 seats; approx. 22ft. long, 7ft wide, 9th high, and 9000lbs.
