

Single Source Justification (Simplified Acquisition)

Section A: General Contract Information

Is this a Bridge Action as defined in the [AF Bridge Action Reduction Plan](#)?☐ Yes☒ No

Contracting Activity: PZ (Arnold) OL Holloman

Project/Program Name: 9155D Calibration Workstation Calibration

Purchase Request / Local ID Number: TBD

Estimated Contract Cost (including Options): [REDACTED]

Section B: Description of the Supplies/Services Required

The 846th Test Squadron (846 TS) operates the Holloman High Speed Test Track (HHSTT), a unique and critical national asset. The HHSTT utilizes rocket-powered sleds to simulate flight environments for testing and validating advanced avionics platforms, payloads, and critical equipment for the Department of War (DoW) and its strategic partners.

The integrity and success of every test mission are directly dependent on the data provided by precisely calibrated sensors. The HHSTT Instrumentation Flight uses a single Modal 9155D Calibration Workstation to perform the mandatory calibration for approximately 80% of all mission-critical sensors. Failure to maintain this workstation in a certified, operational state would result in an immediate and catastrophic loss of this core capability, halting HHSTT test programs, causing significant schedule delays, and jeopardizing DoW mission objectives. This is a recurring, annual requirement previously fulfilled under contract [REDACTED].

Section C: Justification for Soliciting from a Single Source or Brand Name

This acquisition is restricted to the Original Equipment Manufacturer (OEM), The Modal Shop, Inc., in accordance with FAR 6.302-1, as a comprehensive analysis reveals they are the only source capable of meeting the agency's requirements without introducing unacceptable and quantifiable financial and operational risks. The use of an unauthorized third party would trigger a cascade of immediate and significant costs, beginning with the voiding of all existing OEM warranties. This action alone would transfer the full liability for any subsequent system failure directly to the Government, representing an unmitigated risk estimated to exceed [REDACTED] for the repair of a single major component. This financial exposure, however, is dwarfed by the ultimate risk of irreparable damage. Should the actions of an unqualified and unwarranted vendor lead to a catastrophic system failure, the Government would be forced to procure a new workstation, with a total replacement cost for a functionally equivalent 9155D system estimated to be between [REDACTED] and [REDACTED]. Beyond this direct capital equipment risk, the operational costs of not using the OEM are severe. Without the guaranteed provision of loaner equipment, a standard four-week maintenance cycle would halt all sensor calibrations, creating a direct loss of [REDACTED] in non-productive labor costs for an idle test team, and jeopardizing the schedules of [REDACTED] DoD acquisition programs. Furthermore, the risk to Government-Furnished Equipment remains, where improper calibration could damage a single unique test sensor with a replacement cost ranging from \$[REDACTED] to over [REDACTED]. Therefore, The Modal Shop, Inc. is the only source that is technically qualified and fiscally responsible, as their certified solution eliminates these significant, multi-layered financial risks and ensures the continuity of the mission of the 846 TS.

Section D: Efforts to Obtain Competition

Thorough market research was conducted to identify potential competition, but it was determined that none are viable. The 846 TS and Program Manager contacted The Modal Shop, Inc. directly to inquire about authorized service partners, and the OEM confirmed that none exist. Further contact with several of The Modal Shop's competitors revealed that while they could offer partial or general calibration services, none could meet the Government's full requirements, specifically regarding proprietary system access, comprehensive warranty coverage, and the provision of loaner equipment. In addition to direct industry contact, searches were conducted on the AbilityOne Procurement List and GSA Advantage on 17 December 2025, which also conclusively determined that no service on these platforms could fulfill the requirement. These combined efforts confirm that The Modal Shop, Inc. is the only vendor capable of providing the comprehensive, warranted, and risk-mitigating service

Single Source Justification (Simplified Acquisition)

required for the 9155D Calibration System.

Section E: Steps to Preclude Future Single Source or Brand Name Awards

The Government is actively taking steps to foster competition and reduce reliance on a single source for future requirements. Instrumentation Flight subject matter experts will conduct continuous market surveillance by attending industry conferences and engaging with vendors to identify any emerging competitors who may develop the capability to fulfill the complete requirement.

Section F: Contracting Officer's Determination

I have determined, in accordance with [FAR 13.106-1\(b\)\(1\)](#), that the circumstances of this contract action deem only a single source is reasonably available.
