

Defense Healthcare Management Systems Industry Day

March 31, 2026

Welcome to Industry Day

Healthcare Delivery Solutions Contract Strategy Overview

Agenda

- Guiding Principles
- Contract Strategy
 - » Overview
 - » Solutions
 - » Services
 - » Program Office Support
- Governance
- Organizational Conflict of Interest

DHMSM Guiding Principles

Standardization of clinical and business processes across the Services and the Military Health System (MHS)

Design a patient-centric system focusing on quality, safety and patient outcomes that meet **military** readiness objectives

Flexible, open, and **interoperable system of enterprise solutions that support the full patient continuum of care**

Maximizing value through business process reengineering, adoption, and implementation over technology

Leverage transformative technology advancements to provide continuous improvement and state-of-the-art patient care

Decision-making and design will be driven by **health** care delivery professionals

Decisions shall be based on doing what is best for the MHS as a whole – not a single individual area

Drive towards rapid decision making to keep the program on time and on budget

Provide timely and complete communication, training and tools to **ensure optimal Stakeholder Experience**

Build collaborative partnerships outside the MHS to advance national interoperability

Enable full patient engagement in their health **by prioritizing their User Experience**

Enhance patient safety through solutions that reduce harm, improve care, reduce waste, and improve efficiency

Contract Strategy

As part of the contract strategy:

1. What risks have not been accounted for
2. What are the critical success factors for this contract strategy
3. What are the key considerations for the transition plan
4. Are there any further questions or considerations that need to be addressed

Contract Structure Overview

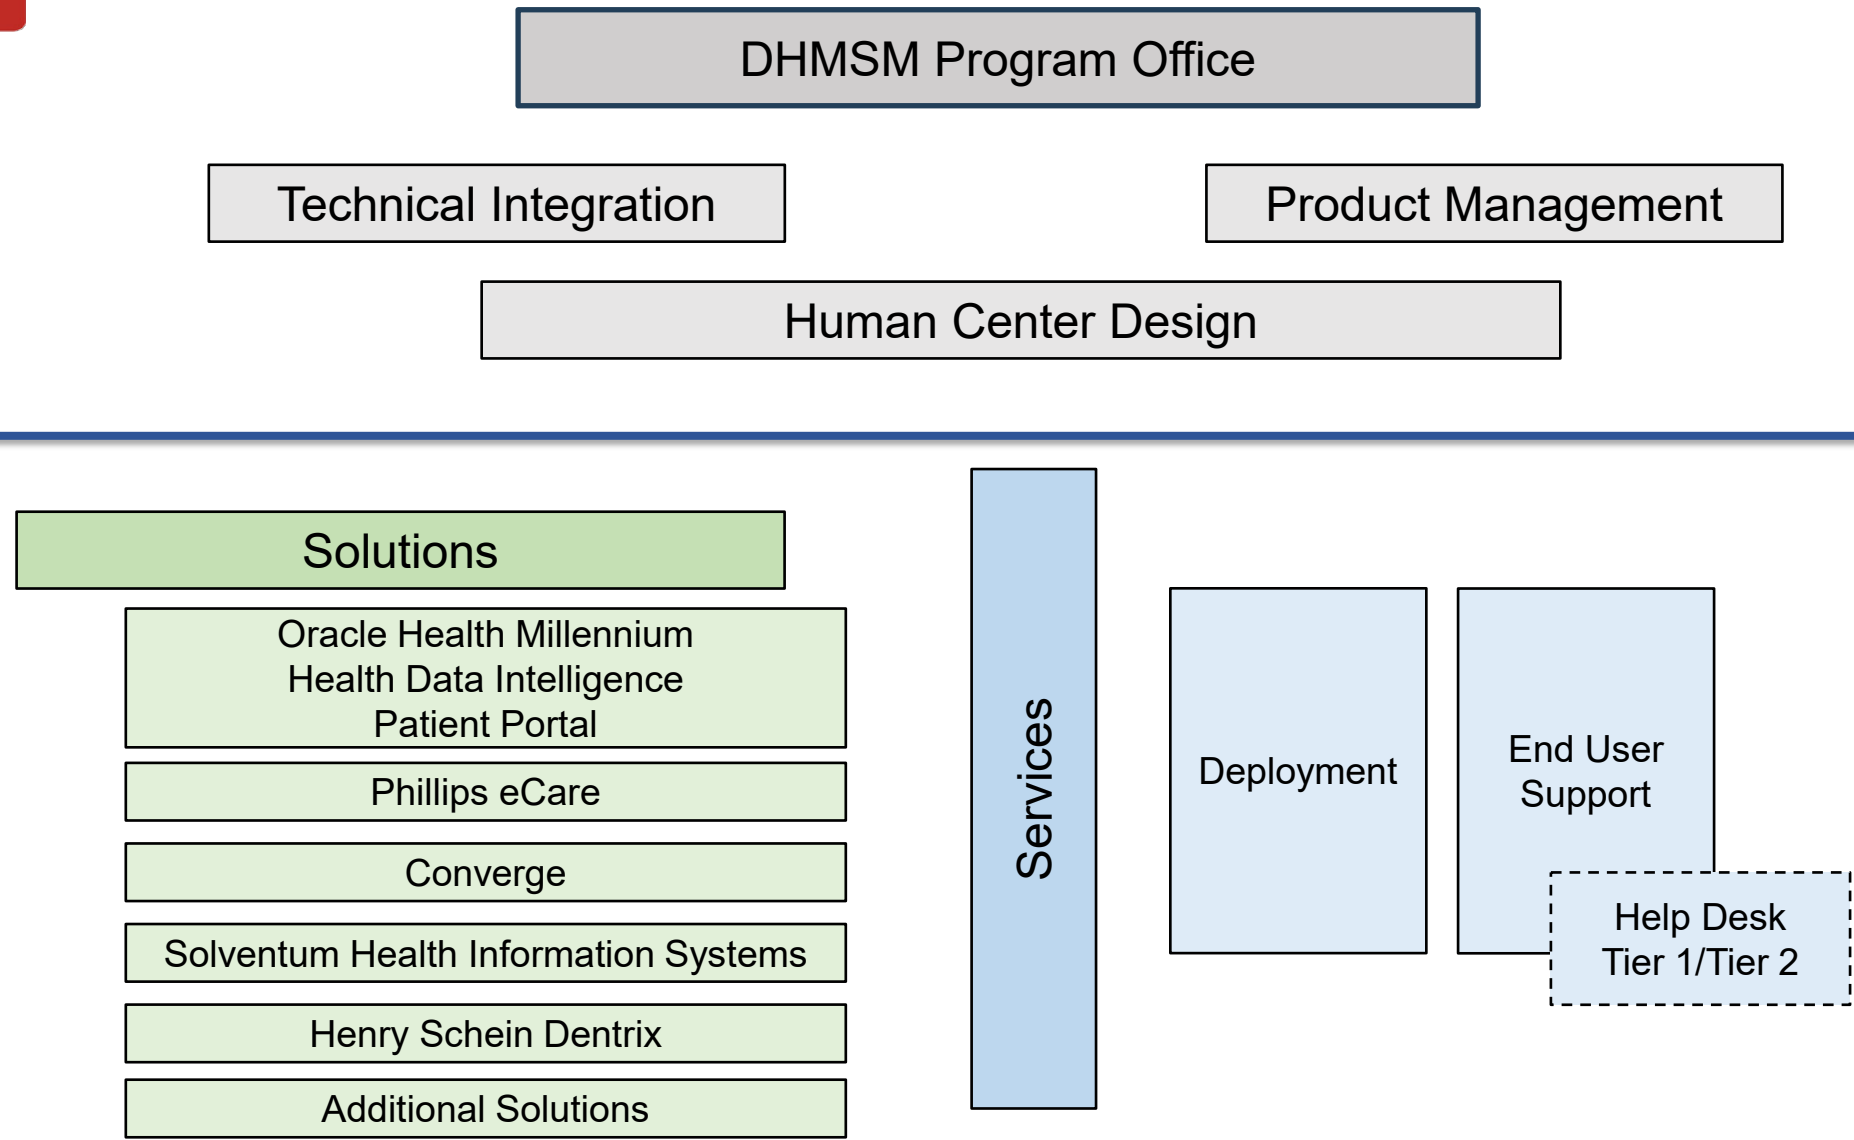

Overview

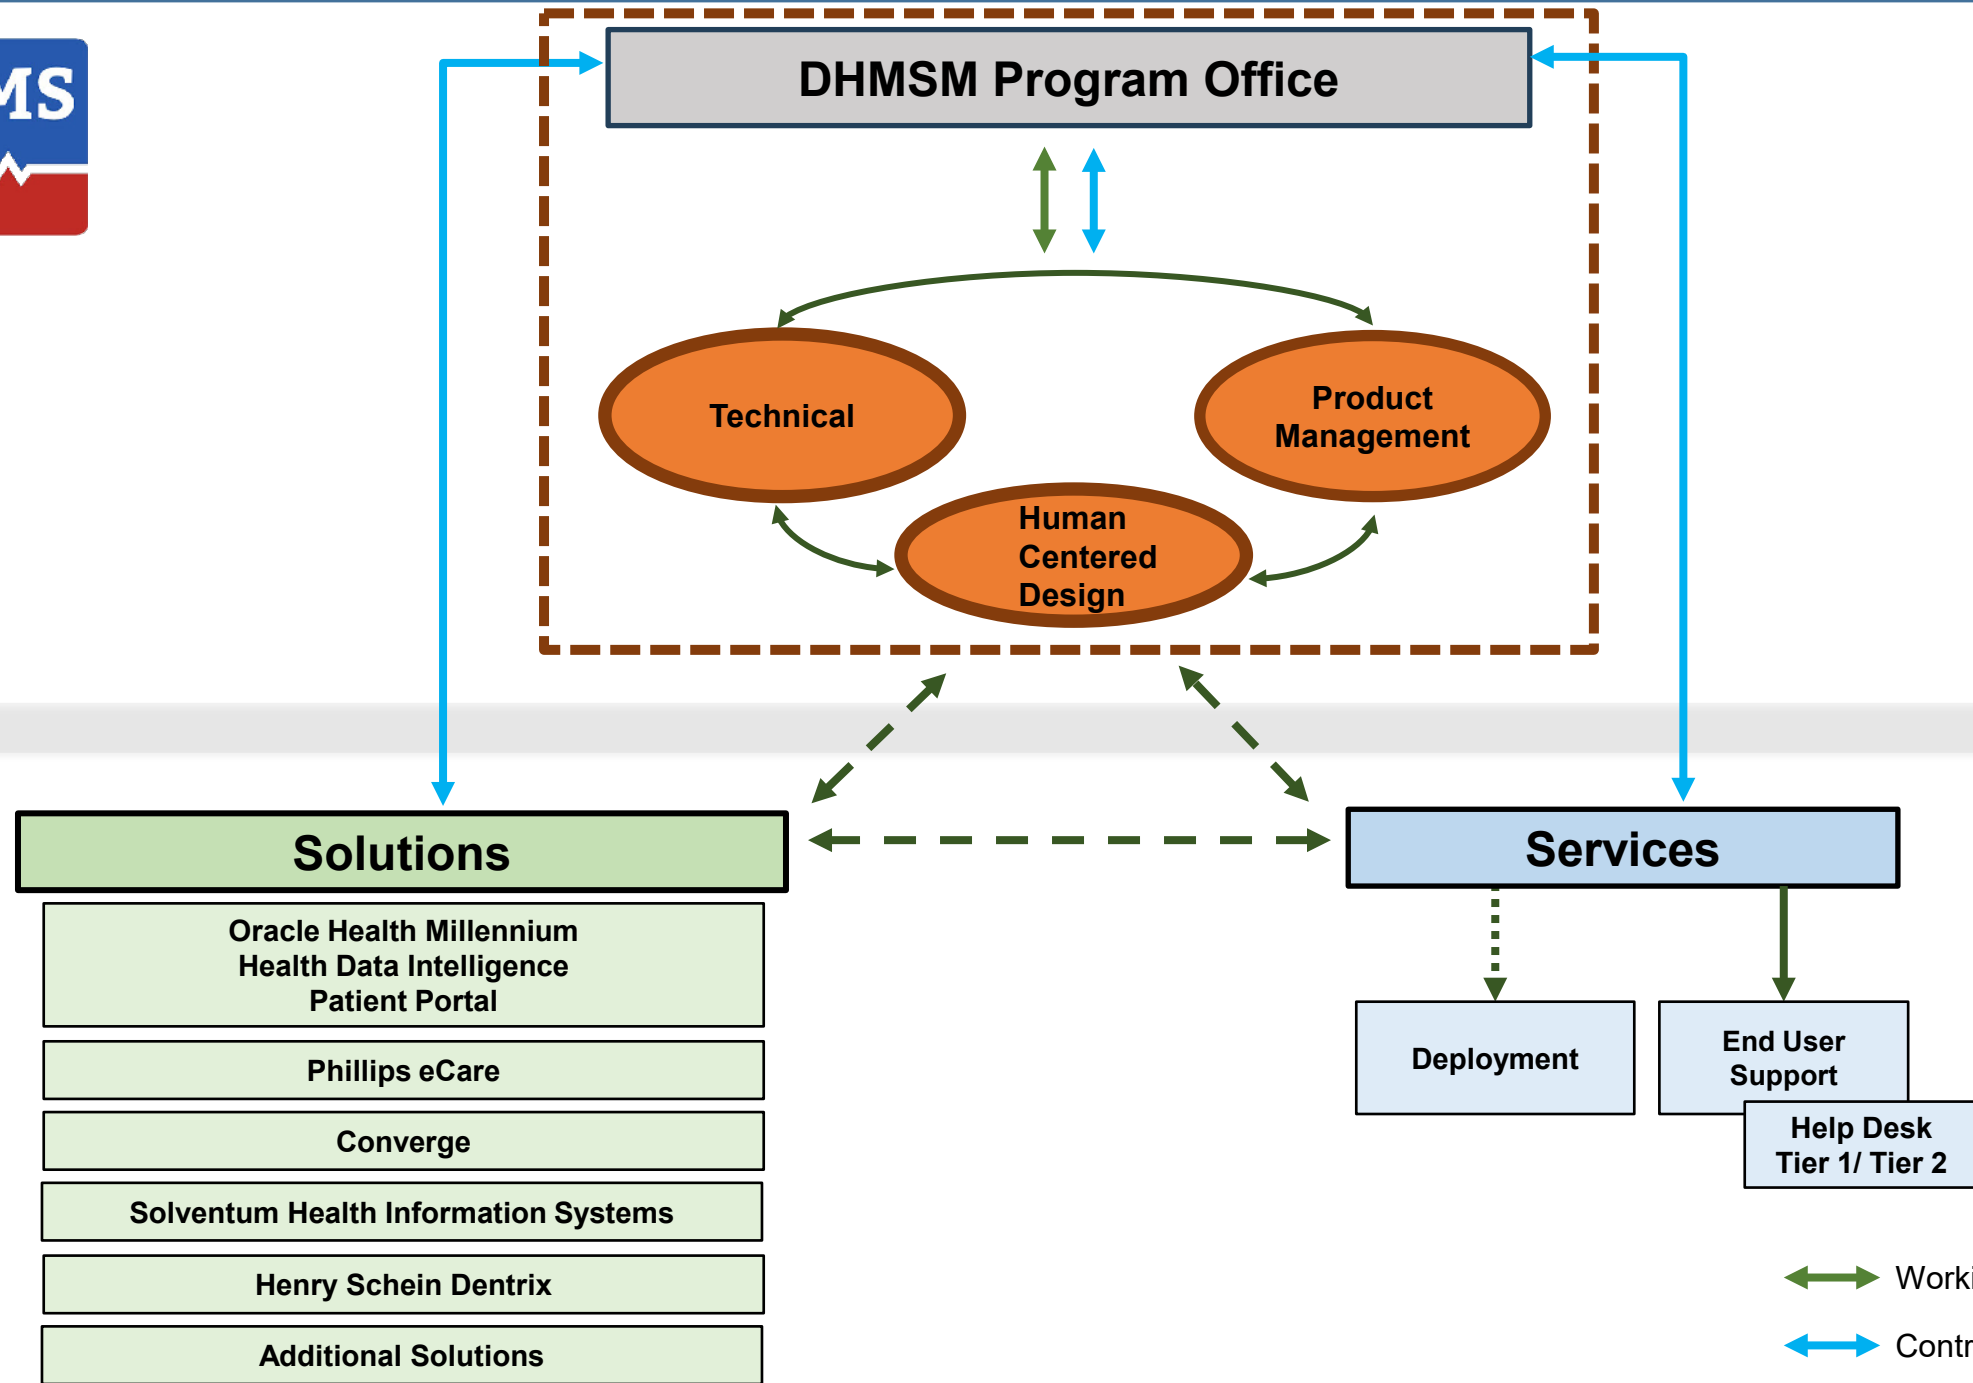

Objective: Flexible and adaptive contracting framework that supports enhanced service delivery, reduces operational costs, and fosters outcome-based relationships

- **DHMSM Program Office:**
 - » Provide oversight and govern all contractor relationships
 - » Key government support functions—including Technical Integration (TI), Human-Centered Design (HCD), and Product Management (PM)—will be performed by contractors
- **Services:**
 - » Deliver critical user-facing services, including Tier 1 and Tier 2 Help Desk, deployment operations, and comprehensive End-User Support (EUS)
- **Solutions:**
 - » Best of Suite (BoS) and Best of Breed (BoB)
- **Transition Plan:**
 - » The contract strategy includes a planned bridge period with the incumbent to ensure a seamless and supported transition.

Contract Strategy Overview

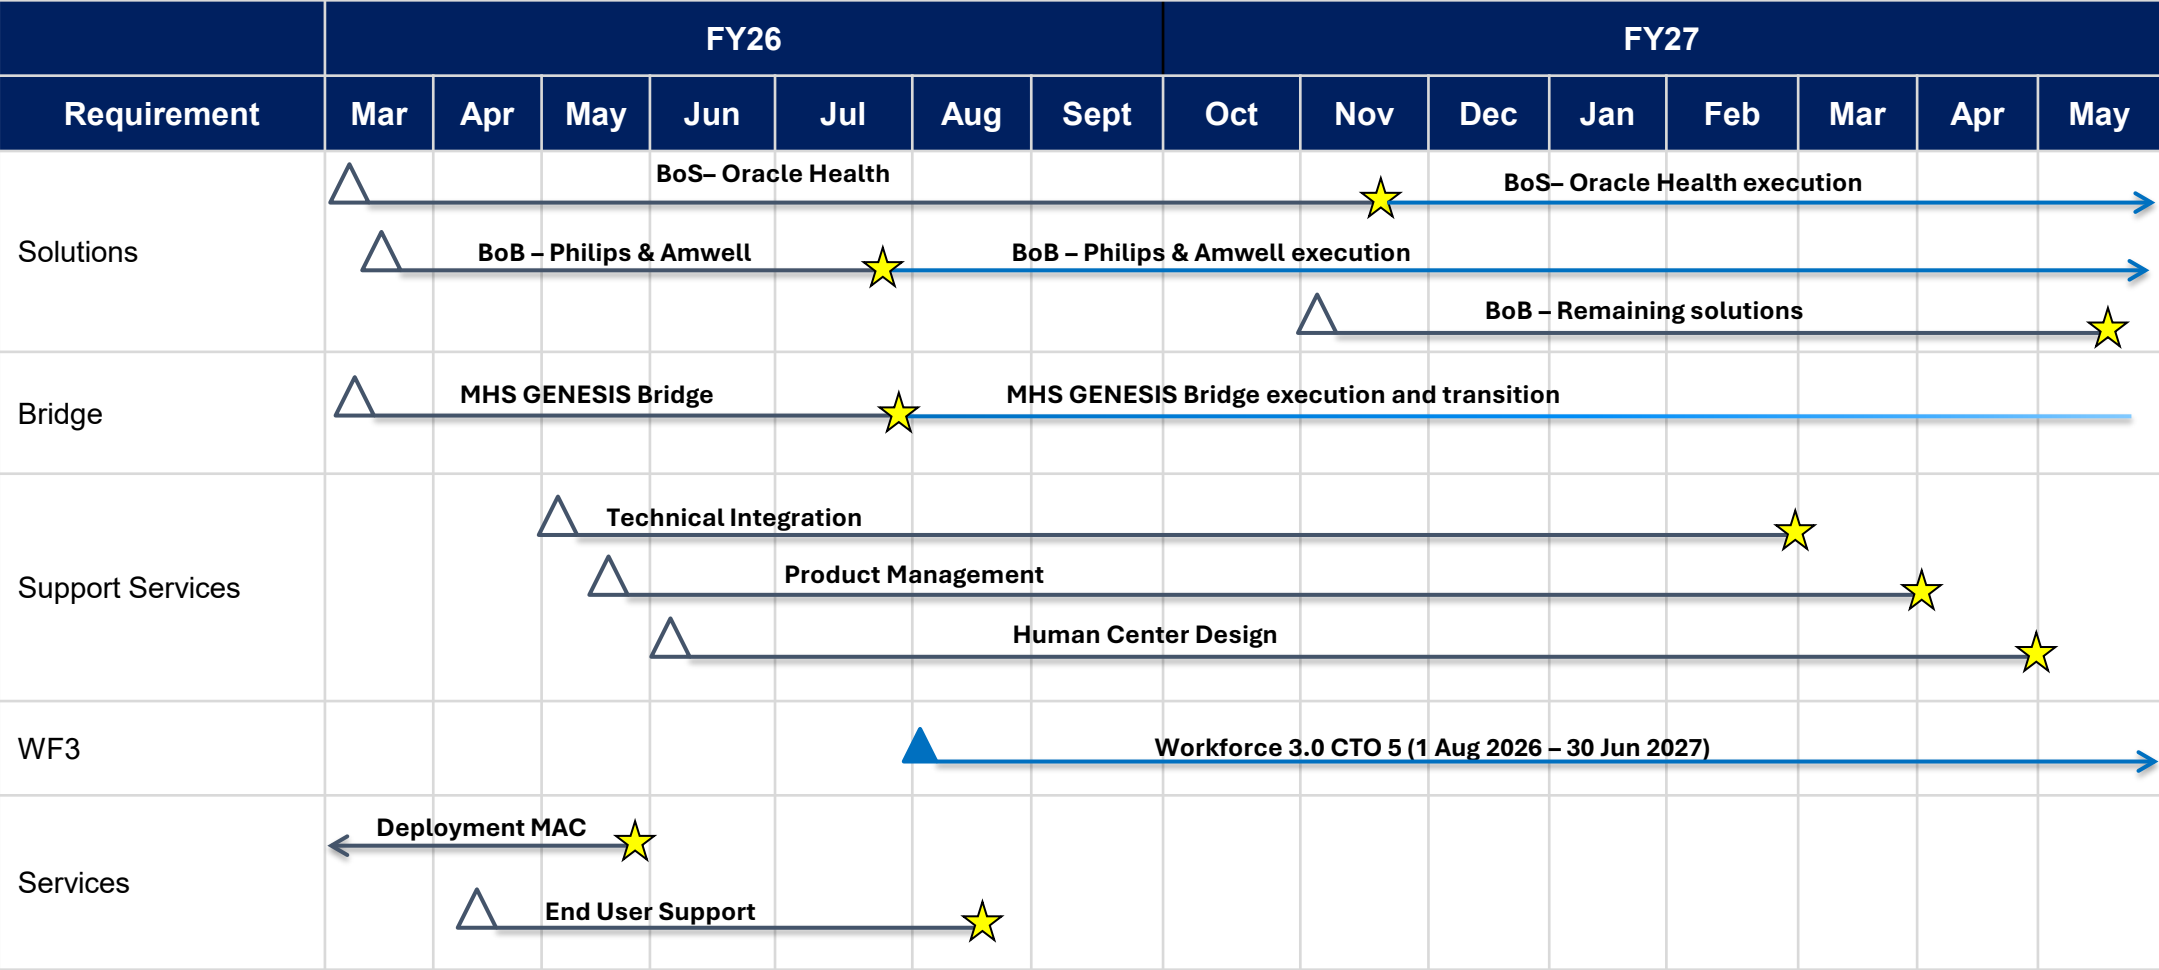

↔ Working Relationship

↔ Contractual Relationship

Contract Strategy Timeline Overview

Timelines subject to change

As part of the contract strategy and governance:

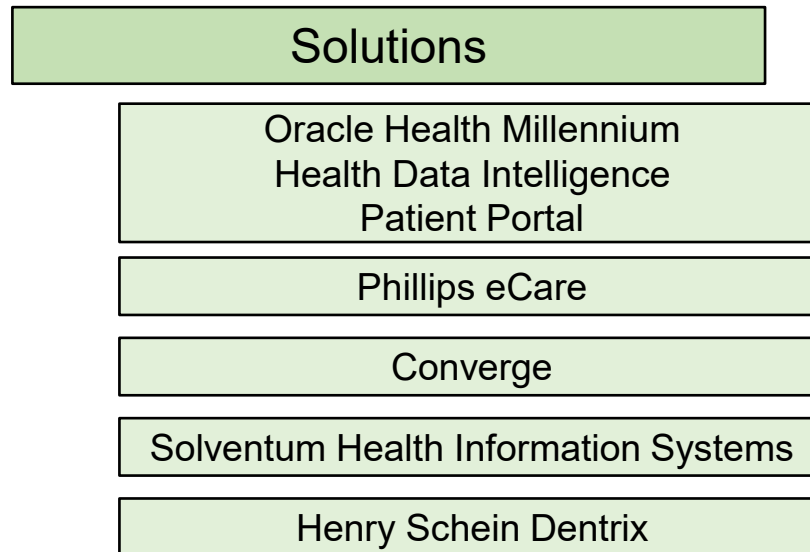

1. What risks have not been accounted
2. What are the critical success factors
3. What are the key considerations for the transition plan
4. Are there any further questions or considerations that need to be addressed

Contract Structure Overview

Solutions

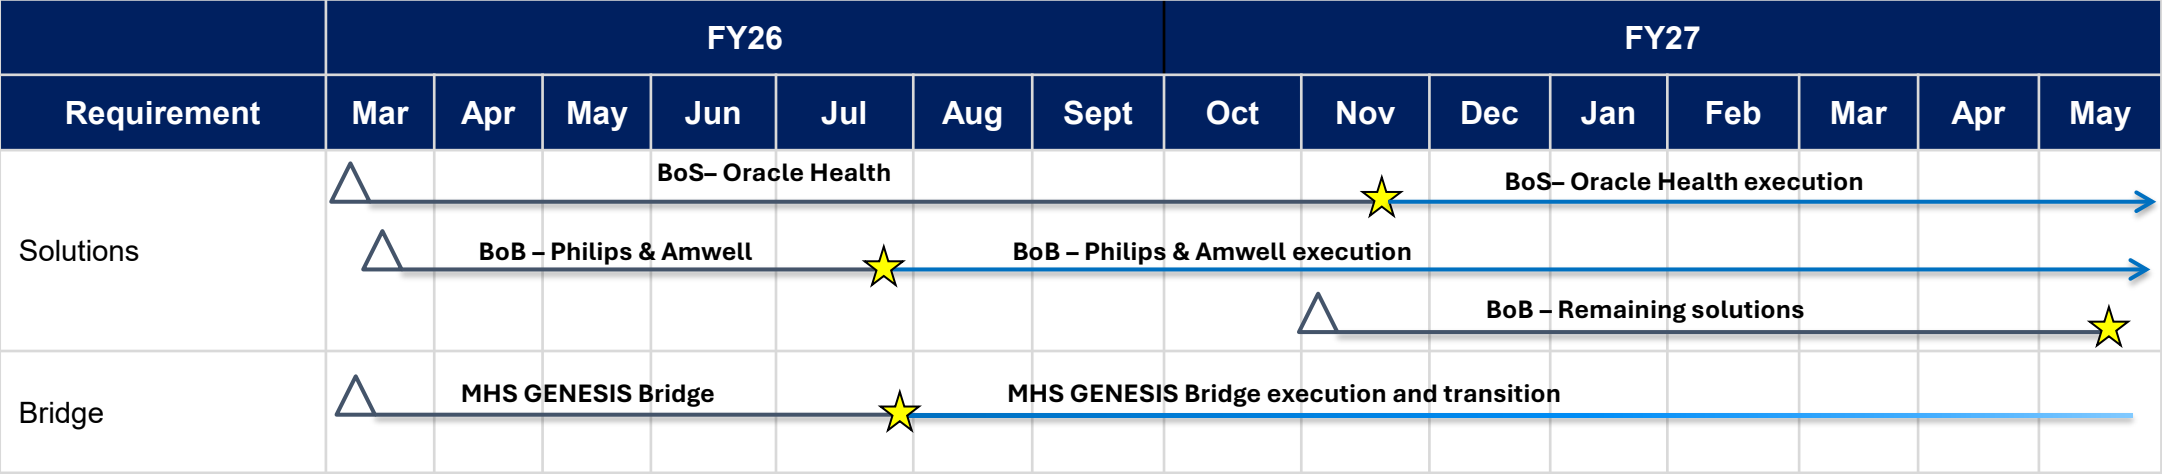

Solution Providers

- **Solution Providers**
 - » Direct Contract with the solution providers (BoS and BoB)
- **Provide the necessary services and software, or subscription, that allows the system to operate effectively and within the agreed upon service levels.**
 - » **Examples of solution scope to be provided:**
 - Software as a Service or license maintenance
 - Hosting
 - Tier 3 ticket resolution
 - Cybersecurity
 - System Monitoring
 - Product evolution or roadmap
 - Commercial training products

Solution Schedule

Questions

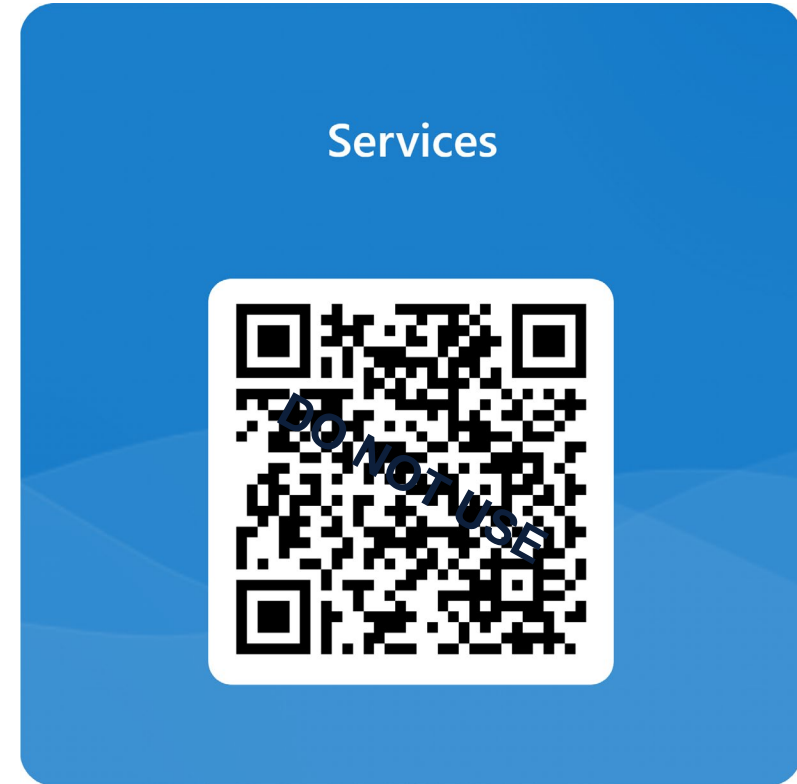

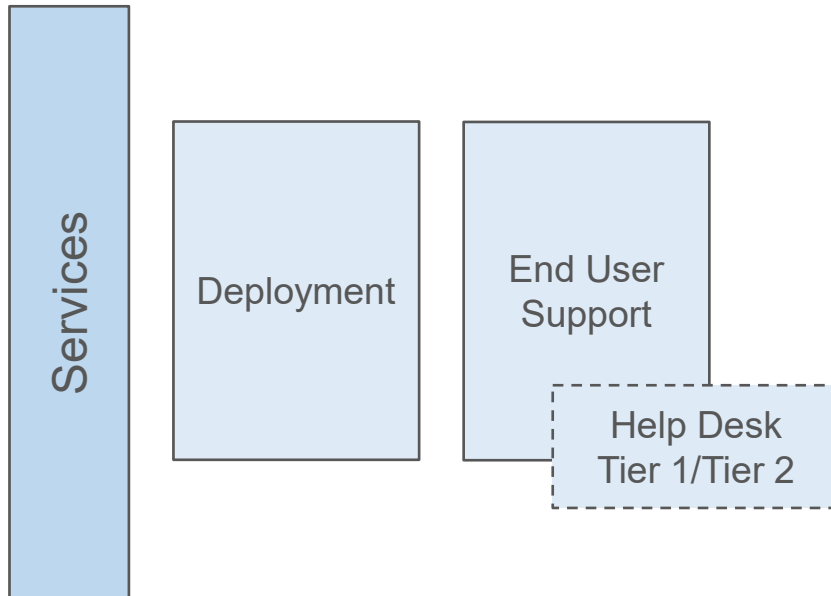

As part of the contract strategy:

1. What risks have not been accounted
2. What are the critical success factors
3. What are the key considerations for the transition plan
4. Are there any further questions or considerations that need to be addressed

Services

Services – Deployment

Purpose & Scope: Provides all services and materials necessary to support and execute the on-demand deployment of any product(s) within the DHMS portfolio and related or supporting components.

Services: includes deployment planning and execution, hardware delivery and connectivity, product connectivity and interface validation, user enablement services, data management and migration.

Services are applicable to Continental United States (CONUS) and Outside Continental United States (OCONUS) locations, covering various roles of care and facility types as specified in individual task orders

Due to forthcoming Request For Proposal (RFP), this will not be a topic for questions
Anticipated RFP release date: 10 April 2026
Continue to monitor sam.gov

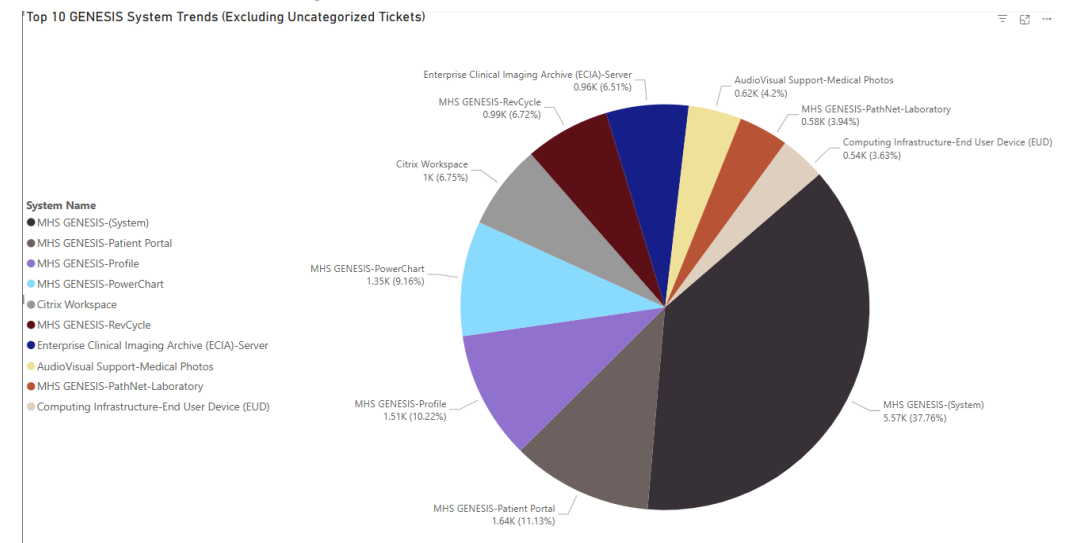

Services – Help Desk

Help Desk Tier 1/ Tier 2: Remains with the Defense Health Agency Global Service Center (DHA GSC) provided by J-6

- » The DHMSM program operates as a key service consumer with DHA GSC
- » Initial support tiers are managed by contractors who utilize ServiceNow as the ticketing system
- » High volume of tickets are currently being escalated and resolved at Tier 2.5 and Tier 3
- » Continue to move towards a “shift-left” strategy to resolve a majority of support tickets at the lowest tier possible

Monthly: 12,738 Annual: 152,850

Future State: Supports efficiencies between Help Desk Tier 1/ Tier 2, End User Support, and Solution Providers.

Services - End User Support

Description: Seamless, intuitive and low-friction experience across all user domains through the alignment of systems, workflows, and support around documented and data-driven user needs.

Key Outcomes: reduced clinician burden, increased adoption and proficiency, consistent and trusted user experience.

Services: Enablement, adoption, training, change, communication, and trust services, and service intelligence/analytics.

Consideration: Integrating Help Desk for efficiencies and improve customer satisfaction

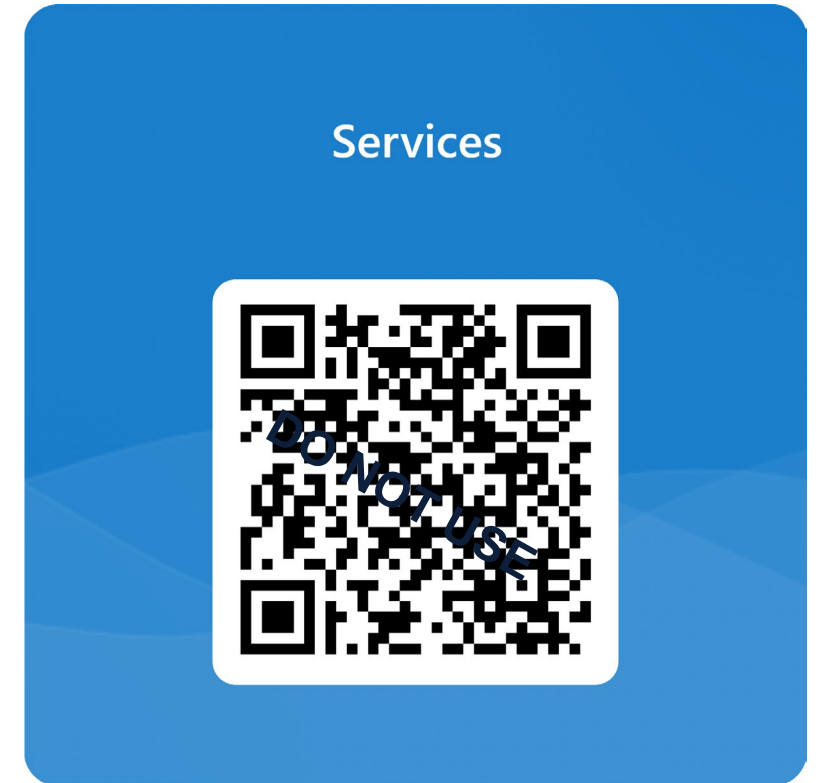

Contract Strategy Timeline Overview

	FY26							FY27							
Requirement	Mar	Apr	May	Jun	Jul	Aug	Sept	Oct	Nov	Dec	Jan	Feb	Mar	Apr	May
Services	Deployment MAC 														
		 End User Support 													

Questions

As part of the contract strategy:

1. What risks have not been accounted
2. What are the critical success factors
3. What are the key considerations for the transition plan
4. Are there any further questions or considerations that need to be addressed

Program Office Support

Technical Integration

Product Management

Human Center Design

Technical Integration, Product
Management, & Human Centered
Design

Technical Integration

Description: Complete lifecycle management ensures the system is secure, architecturally sound, and engineered for optimal performance from design to deployment.

- » Results in a stable, integrated, and continuously supported system designed to meet all mission needs.

- **Examples of responsibilities**

- » Interface Engine: Rhapsody and all developed interfaces
- » System Monitoring
- » Cybersecurity: Authority to Operate (ATOs) and oversight for compliance of all cybersecurity requirements
- » Account creation/ modification
- » Network connectivity process
- » Architecture and engineering

Product Management

- Supports the Government accountability for the product's complete lifecycle, managing its cost, schedule, and performance.
- Key responsibilities include:
 - » Overseeing defect and ticket resolution to enhance product quality
 - » Direct collaboration with Government functional requirements owners is maintained to ensure the product aligns with their specific needs
 - » Market Intelligence on new products and/or product migration
 - » Curate the product roadmap to prioritize the backlog
 - » Governance participation
 - » Product experts to assist with user adoption
 - » Strategic guidance and advocate for the efficiency and effectiveness of the product

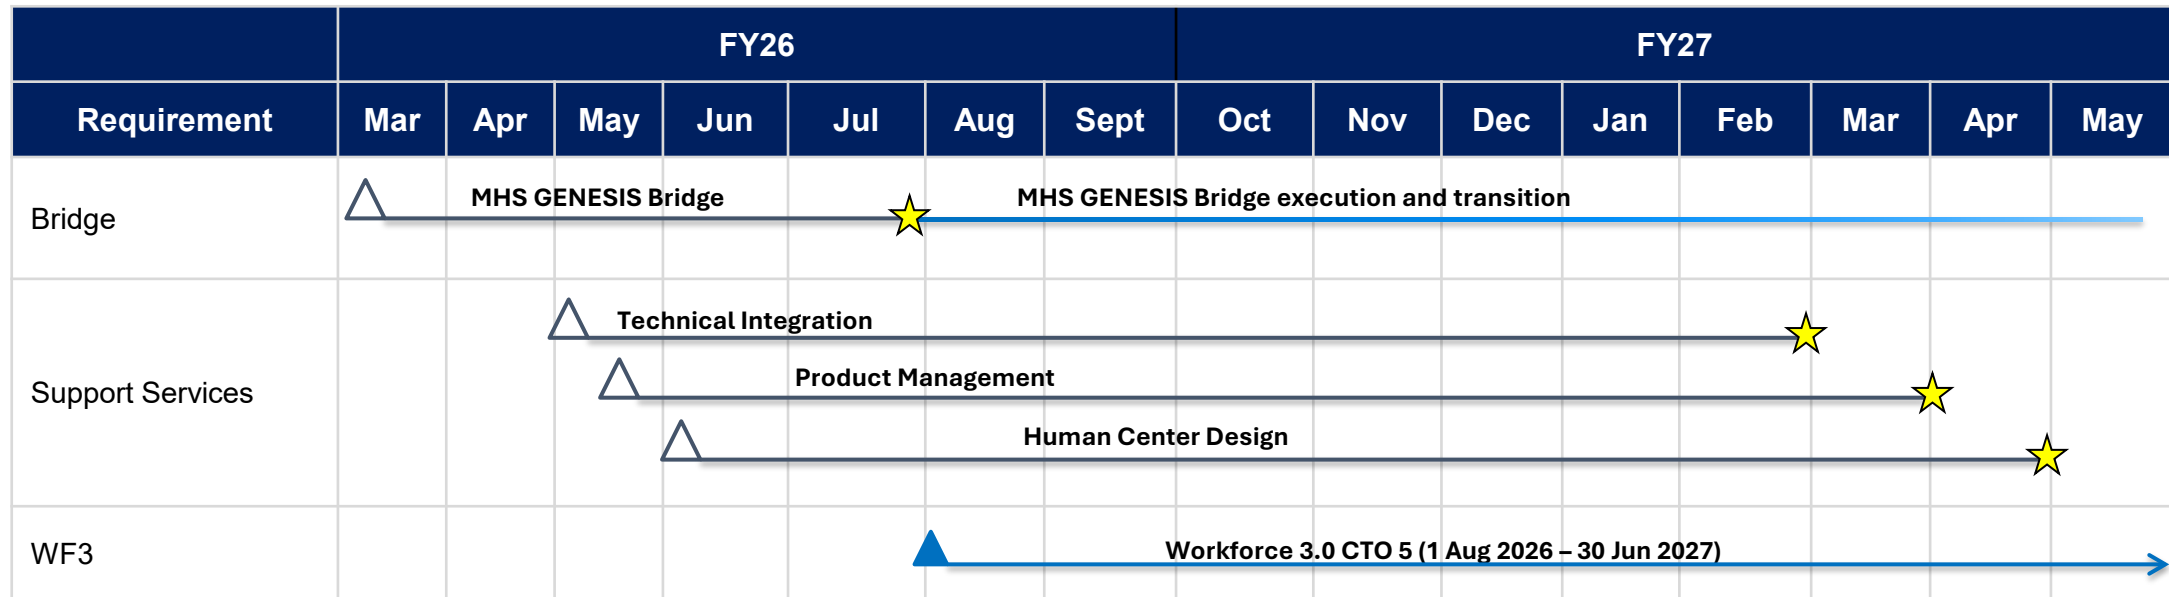

Human Centered Design

- Balance the technical design and user needs to fulfill requirements, with a strategic focus on the design and optimization of the capability
- Primary goal is to deliver a "delightful" experience for end-users, moving beyond simple usability to ensure high customer satisfaction.
- Success is ultimately measured by the satisfied customers realizing value
- Anticipate a small team with workflow, solution, and technical expertise

Program Office Support Timeline Overview

Questions

Technical Integration, Product
Management, & Human Centered
Design

As part of the contract strategy:

1. What risks have not been accounted
2. What are the critical success factors
3. What are the key considerations for the transition plan
4. Are there any further questions or considerations that need to be addressed

Governance

As part of the governance:

1. What risks have not been accounted
2. What are the critical success factors
3. Are there any further questions or considerations that need to be addressed

Contract Structure Overview

Structure

DHMSM Program Office:

- » Oversees overall program execution and ensures alignment with strategic goals
- » Coordinates between solutions, services, and stakeholders
- » Provides governance, funding, and policy direction

Goals:

- Full Integration
- Reduce overhead
- Increase efficiencies
- Decrease redundancies
- Joint use of processes and tools

Three Integrated/Unified Teams -- Technical, Product Management and Human Centered Design:

1. Technical is comprised of Engineering, Test, Operations and their subcomponents
 - Ensures seamless data exchange between solutions and services
 - Oversees interoperability and system performance
2. Product Management is comprised of SMEs and Products Lines (Clinical, Business Operations, Digital Health and their subcomponents)
 - Aligns solutions with user needs and program objectives.
 - Coordinates updates and enhancements across solutions
3. The Human Center is the link between Technical and Products
 - Focuses on user experience and usability
 - Works with deployment and end-user support teams to gather feedback and improve systems

Solutions and Services:

- » Operate under contractual agreements with clear deliverables and performance metrics.
- » Collaborate through defined workflows and integration points.

Two-Pronged Governance Model

Day-to-Day Operations Governance	Contract Governance
HOW WE GET THE WORK DONE	HOW WE ENSURE CONTRACTOR PERFORMANCE
• Driving for results through cross-functional collaboration • Accountability is explicit and enforced • Comprised of product management, technical management and human center integrated teams to manage operations and drive success • Utilize current SOPs; seek efficiencies and improvements • Utilize current government tools; seek low/no cost alternatives	• Performance management: Service Level Agreements (SLAs), Operational Level Agreements (OLAs), Contractor Performance Assessment Reports (CPARs), Quality Assurance Surveillance Plans (QASPs), measurable outcomes/KPUs • Ensures vendors deliver • Gaps and failures are addressed • Determines ownership and forces closure when responsibility is disputed

KEY TAKEAWAYS:

- *Collaboration is the key to success*
- *Planning, programmatic execution, issues and concerns are team efforts that are visible and shared*
- *Responsibility and resolution are collaborative*

Governance: Intake and Planning

STEP 1: A Need is Identified

Human Centered Design

- Translates user needs into end-to-end workflows
- Identifies all impacted solutions and vendors

Product Management

- Defines requirements across multiple solution contracts
- Aligns priorities across vendors

Technical/Engineering

- Assesses cross-system integration feasibility
- Identifies dependencies between vendors
- Evaluates cyber impact

GOVERNANCE: Standard DHA and DHMSM Product, Engineering and Human Centered Design meetings/boards (SOPs, Tooling, Portfolio, Intake, Prioritization, Product Line Meetings, etc.)

Weekly Integrated Operations Forum: Ensures cross-solution alignment, risk and schedule management, priorities and outcomes and system readiness

KEY TAKEAWAY: *Every capability is defined and approved as a carefully coordinated cross-vendor effort*

Governance: Design and Execution

STEP 2: Design and Execution

Human Centered Design

- Ensures workflows remain consistent across systems
- Resolves performance/usability gaps between vendor solutions
- Clearly define governance, roles and responsibilities

Product Management

- Integrated Design (All Teams + Vendors)
- One shared user experience defined across systems
- Capability is decomposed into vendor-specific components

Technical/Engineering

- Coordinated Multi-Vendor Build
- Vendors configure in parallel
- Technical team acts as system integrator
- Shared release cadence, configuration management and integration standards

GOVERNANCE: Standard DHA and DHMSM Product, Engineering and Human Central meetings/boards (SOPs, Tooling, Portfolio, Project IPTs, Resource Management, Risk Management, Schedule Management, CDR, TRR, ORR, FDR events)

Bi-Monthly Release Governance Board: Approves solutions/services and PMO deployment readiness, IMS, risk posture and operational impact

KEY TAKEAWAY: *Vendors deliver components and governance ensures a single, seamless experience*

Governance: Coordinated Deployment and Continuous Improvement

STEP 3: Capability Delivery and Post-Production

Human Centered Design

- Collaboratively deliver prioritized enhancements
- Leads adoption, training and alignment
- Conducts After Action Reviews
- Collects lessons learned and maintains registry

Product Management

- Plans for product integration and deployment
- Stakeholder management
- Continuous Reporting and improvement loop flowing across all Solutions through governance
- Spearheads validation coordination

Technical/Engineering

- Coordinated Release Across Vendors
- Deployment is technically synchronized across solutions
- Dependencies are managed centrally
- Defect and incident management
- Conducts integration, testing and

GOVERNANCE: Standard DHA and DHMSM Product, Engineering and Human Central meetings/boards (SOPs, Tooling, Portfolio, Project IPTs, Resource Management, Risk Management, Schedule Management, CDR, TRR, ORR, FDR events)

After Action Review and Lessons Learned: Approves solutions/services and PMO deployment readiness, IMS, risk posture and operational impact

KEY TAKEAWAY: *Vendors operate as part of a coordinated ecosystem, success is defined by how well we integrate, align, and operate together*

Question

Contract Structure Overview

As part of the governance:

1. What risks have not been accounted
2. What are the critical success factors
3. Are there any further questions or considerations that need to be addressed

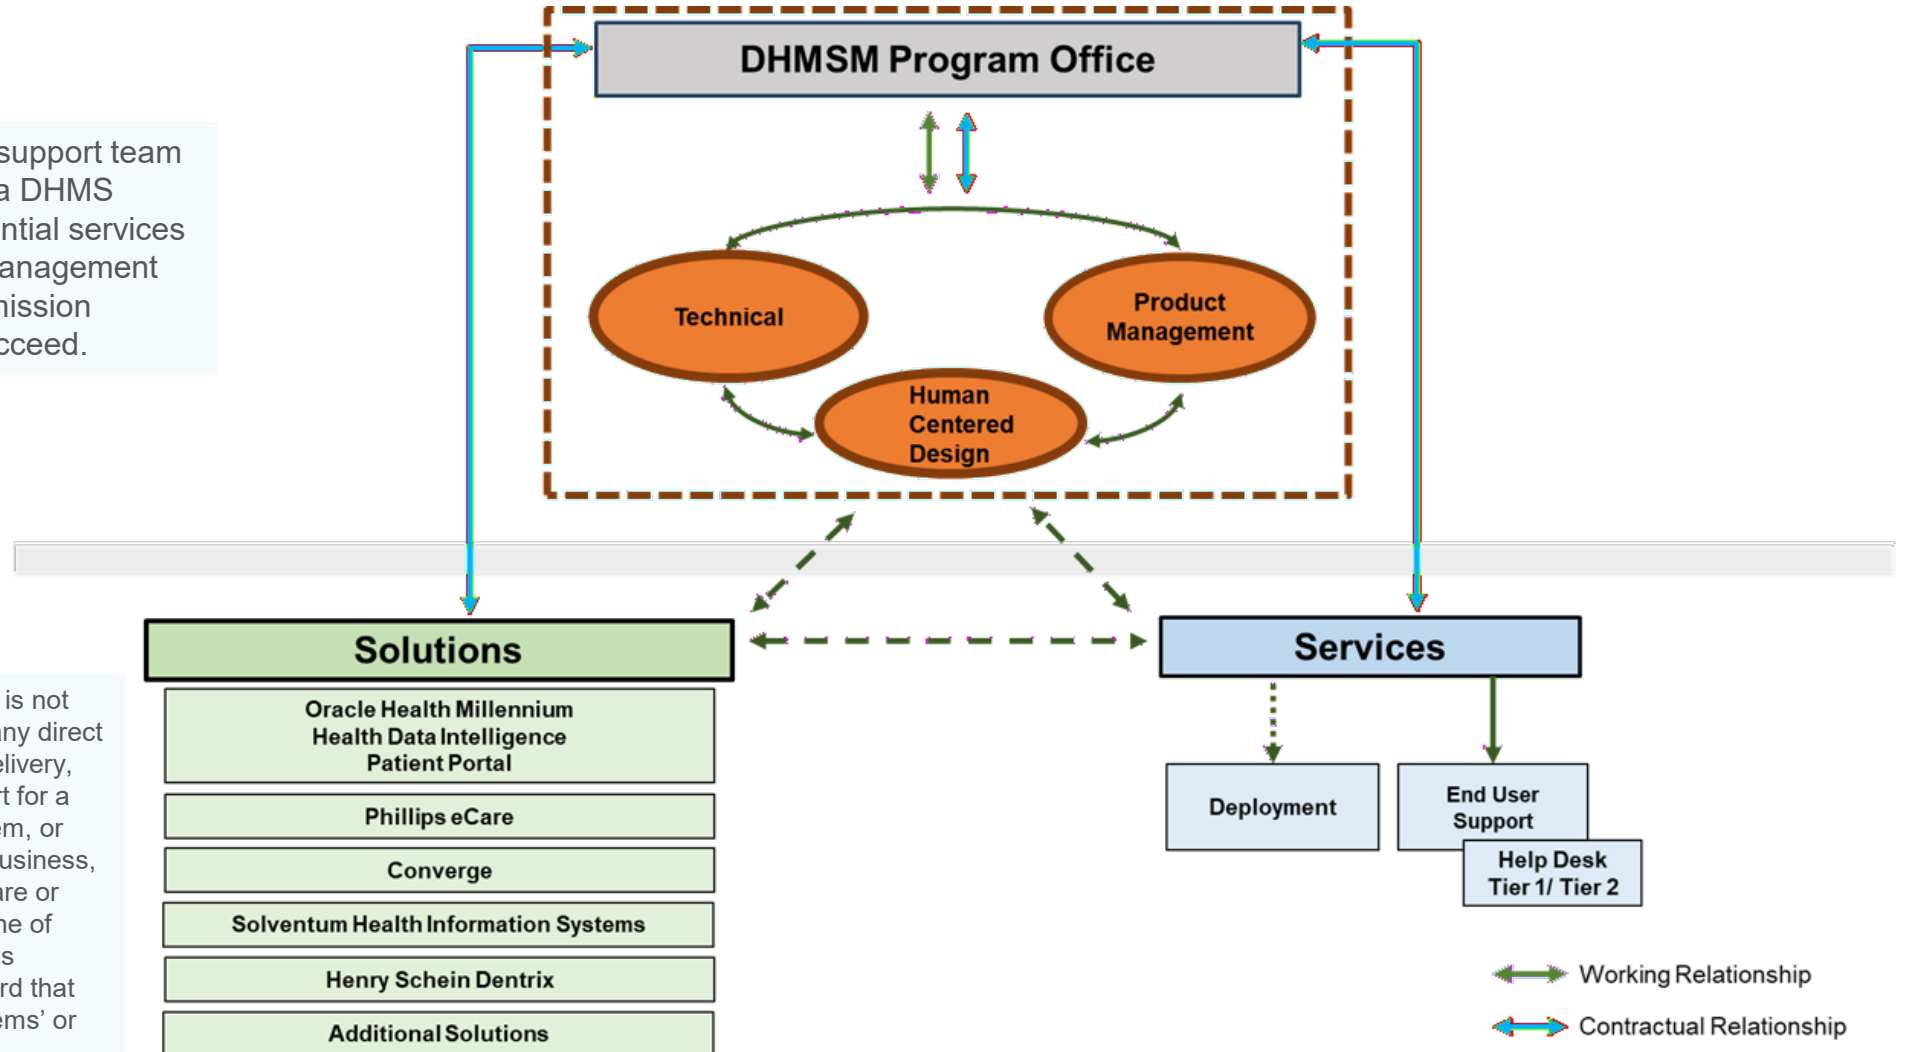

Organizational Conflict of Interest

Organizational Conflict of Interest (OCI)

Middle Office support: the support team of a technology company (aka DHMS PMO). They provide the essential services and handle general project management and IT tasks that the “prime mission product team(s)” needs to succeed.

Prime Mission Product: Includes but is not limited to support services resulting in any direct financial interest in the development, delivery, implementation, sustainment, or support for a component of, integrated product, system, or system of systems utilized by clinical, business, or management end users in a healthcare or operational medicine environment by one of PEO DHMS' partner organizations. This includes programs and systems of record that are referred to by policy as “major systems” or “Defense Business Systems”.

Organizational Conflict of Interest (cont)

- **RFO 9.505** prescribe limitations on contracting as the means of avoiding, neutralizing, or mitigating organizational conflicts of interest that might otherwise exist in the stated situations.
 - » The two underlying principles are
 - Prevent the existence of conflicting roles that might bias a contractor's judgment
 - Preventing unfair competitive advantage
 - an unfair competitive advantage exists where a contractor competing for award of any Federal contract possesses
 - Proprietary information that was obtained from a Government official without proper authorization
 - Source selection information that is relevant to the contract but is not available to all competitors; and as such information would assist that contractor in obtaining the contract

Summary

- A collaborative path to success
 - » Contract strategy is built on integration, collaboration, and clear accountability
 - » Transitioning to an integrated model with three distinct pillars: Solutions, Service, and Program Office Support
 - » DHMSM Program Office will provide strong, centralized governance to ensure all partners operate as a single, coordinated ecosystem
 - » Driven by Guiding Principles to deliver a standardized, interoperable, and state-of-the-art system that puts patients first
