

Project Labor Agreement (PLA) Request for Information (RFI)
for
DESIGN BID-BUILD, P-1419: CONVENTIONAL PROMPT STRIKE WEAPON TEST FACILITY,
NAVAL WEAPONS STATION, YORKTOWN, VIRGINIA

This is a request for information/market survey. This is not a request for proposal, request for quote, or an invitation for bid. There will be no solicitation, specification, or drawings available at this time.

Naval Facilities Engineering System Command (NAVFAC) Mid-Atlantic is soliciting comments from the public addressing the potential use of Project Labor Agreements (PLA) for the following construction project. The construction project is for a facility/building. This project constructs a 20,100 SF , single-story Conventional Prompt Strike (CPS) weapons Test Facility (TF) on a reinforced concrete foundation. The TF is a single-story, insulated precast concrete and insulated metal wall panel building over a steel frame superstructure. The roof structure will include a single slope, mechanically seamed metal panel roof system. The building provides space for maintenance bays and one drive-through aisle. The building will also provide space for tool and parts storage, restrooms, office spaces for direct supervision (non-administrative), mechanical/electrical equipment rooms for building support and environmental control equipment to support high-capacity environmental control systems and all associated interior/exterior systems to support the building operations. Facility-related control systems include cybersecurity features in accordance with current Department of Defense (DoD) criteria. This project will provide Antiterrorism (AT) features and comply with applicable service and Geographic Combatant Commander policies and directive per Unified Facilities Criteria (UFC) for DoD Minimum Antiterrorism Standards for Buildings. Built-in equipment includes one bridge crane (25-ton), four air handling units with air cooled chillers, a compressed air system, a fire pump, and an emergency natural gas fired generator. HVAC systems for the building includes a chilled water system with air cooled chillers, air handling units (including redundant units for the operations space), and exhaust systems. Electrical utilities include underground utility distribution, secondary electrical distribution systems, lighting, and telecommunications infrastructure. Electronic security system infrastructure and fire alarm systems, along with lightning protection and grounding will be included with the project. Mechanical utilities include sanitary sewer lines with a lift station, potable water supply lines, compressed air system with piping, natural gas supply line and water main with fire hydrant. Environmental mitigation includes unexploded ordnance removal and other items to comply with state and local requirements. Demolition includes the removal of (1) Building 521, 831 m2 ammunition lab, (2) Building 522, 73 m2 explosive machine facility, (3) Building 523, 170 m2 explosive test facility, (4) Building 524, 18 m2 explosive storage, (5) Building 1459, 33 m2 boiler house, (6) Building 1586, 13 m2 explosive storage, (7) Building 534, 12 m2 inert storage, and (8) Building 633, 9 m2 chemical storage. The buildings will be demolished to clear the site for this project. The project will be design-build with the NAICS Code 236220. The magnitude of construction is anticipated to be \$25,000,000 and \$100,000,000. The general period of performance is anticipated to be approximately 1,000 calendar days.

A PLA is defined as a pre-hire collective bargaining agreement with one or more labor organizations that establishes the terms and conditions of employment for a specific construction project and is an agreement as described in 29 U.S.C. 158 (f). Revolutionary Federal Acquisition Regulation Overhaul (RFO) policy states: Executive Order (E.O.) 14063, Use of Project Labor Agreements for Federal Construction Projects, requires agencies to use PLAs in large-scale construction projects (defined as a construction projects with a total estimated cost at or above \$35M) to promote economy and efficiency in the administration and completion of Federal construction projects. When awarding a contract in connection with a large-scale construction project, agencies shall require use of a PLA for contractors and subcontractors engaged in construction on the project, unless an exception(s) at RFO 22.502-2(d) applies. Reference is made to: RFO Subpart 22.5 Use of Project Labor Agreements for Federal

Construction Projects; provision, RFO 52.222-33 Notice of Requirement for Project Labor Agreement; and to clause, RFO 52.222-34 Project Labor Agreement.

In consideration of the above factors, and any others which may be deemed appropriate, the public is invited to provide responses on the use of a PLA for this construction project utilizing the attached questionnaire.

This is not an announcement of the availability of a solicitation nor is it a means of generating a plan holder's list. This survey is for planning purposes only and shall not be construed as a Request for Proposal or as an obligation on the part of the Government. The Government does not intend to award a contract on the basis of this market survey or otherwise pay for the requested information. The Government will not provide a debriefing on the results of this survey. All information will be held in a confidential manner and will only be used for the purposes intended.

Responses shall be submitted on the attached questionnaire via email to ashlee.r.beggs.civ@us.navy.mil no later than 2:00 P.M. local time on 20 May 2026.
