

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
1	5-Mar-26	PWS					Will subcontractors be required to hold a Facility Clearance for task orders issued under this IDIQ, or is it anticipated that clearance requirements will be determined on a task order basis? We did not see an FCL requirement specified at the IDIQ level and wanted to confirm how this will be handled.	19-Mar-26	The current IDIQ PWS does not require an Facility Clearance Level (FCL); however, any requirement for an FCL will be delineated to the task order level.
2	5-Mar-26	PWS					We are currently CMMC Level 1 self-assessed. We did not see a specific CMMC level requirement identified in the solicitation. Do you anticipate that CMMC Level 2 certification may be required for certain task orders, particularly as the CMMC program continues implementation beginning November 10, 2026?	19-Mar-26	CMMC Level 2 is anticipated for task orders.
3	5-Mar-26	PWS					My company is new to multiple award contracts. Will the Government explain how the PWS provided for the draft RFP will work for future task orders?	19-Mar-26	Each multiple award contract (MAC) holder will have the same PWS as an attachment to their respective contract award. The purpose of the IDIQ PWS is to provided the scope of end-to-end tasking allowable for the MAC. Specificity will be provided at each task order and incorporated into a task order PWS. IDIQs (D contracts) are often used when the Government anticipates recurring requirements (such as deployments) but cannot predetermine the precise magnitude or scale of the services required during the full performance period of the contract.
4	10-Mar-26	52.212-1	2		Bidscale Submission Portal Account Creation	Line 35	Recommend allowing a primary and backup Bidscale account for each offeror to reduce submission risk (single-account constraints can create avoidable schedule risk). Clarify support process and acceptable contingency steps if Bidscale access issues occur within 24 hours of due date.	19-Mar-26	4a and 4b. The Government will consider the recommendations as final revisions are incorporated for the combined synopsis/solicitation.
5	10-Mar-26	52.212-1	4		Page Size/Format; Line Numbering	Line 15	Clarify whether line numbering is required for all volumes and whether page limits apply per-volume or overall. Recommend allowing 0.5" margins and modern readable fonts (or explicitly confirm Times New Roman 12 is required) to reduce formatting disputes.	19-Mar-26	5a. Line numbering applies to all Volumes. 5b. Pursuant to 52.212-1 Section 4.0, Table 2 Page limits apply to the Volume unless an exception applies at 52.212-1 Section 3.1 to include title pages, cover pages, tables of contents, tab indexing, glossaries, and lists of tables and figures. 5c. The Government will consider the recommendation as final revisions are incorporated for the combined synopsis/solicitation.
6	10-Mar-26	52.212-1	2		Evaluation / Use of AI Tools	L105-L109 (anchor L107)	If AI tools are used to summarize proposals for evaluators, recommend adding guardrails: AI outputs are advisory only; final determinations are human; proposal data is not used to train models; retention limits for AI-generated summaries; and a documented review step for accuracy.	19-Mar-26	Pursuant to 52.212-1, Section 2.2, paragraph 4 "AI tools will be used solely as an administrative aid. All evaluation judgments and source selection decisions will be made by Government personnel."
7	10-Mar-26	PWS	4		Deployment Readiness Assessment	Line 143	Add a standardized 'Definition of Ready' checklist per site (network, identity, devices, training completion, change approvals) with a hard-stop gate prior to cutover. This reduces variability across sites and improves auditability.	19-Mar-26	Due to the unique requirements at the task order level, a standardized checklist is not feasible across all products for the IDIQ. See question 3.
8	10-Mar-26	PWS	2		Training	L41-L45 (anchor L43)	Specify training effectiveness metrics beyond attendance (role-based competency checks, scenario-based validation, and completion evidence). Recommend accessible training artifacts (508-compliant) and multilingual support where applicable.	19-Mar-26	Specific training metrics may vary by task order based on mission needs and product delivery. Offerors are encouraged to propose unique solutions during these competitions IAW the evaluation criteria. See question 3.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
9	10-Mar-26	PWS	9		Adoption and Change Management	Line 1	Recommend requiring an adoption plan with measurable outcomes (adoption KPIs, workflow adherence, ticket trends, and user satisfaction) and a post-go-live reinforcement cadence (office hours, refreshers, targeted coaching).	19-Mar-26	Offerors shall provide adoption plans based on mission needs and product delivery for respective task orders. See question 3. Specifically, for this proposal, refer to CDRL A003 Deployment Approach and 52.212-1 & 52.212-2.
10	10-Mar-26	PWS	5		Post-Deployment Stabilization Support	Line 28	Recommend defining a hypercare period (e.g., 30/60/90 days) with clear success exit criteria, escalation paths, and reporting cadence (issues, resolutions, root causes).	19-Mar-26	Post-Deployment Stabilization report may vary by task order based on mission needs and product delivery. Offerors are encouraged to propose unique solutions during these competitions IAW the evaluation criteria. See question 3.
11	10-Mar-26	PWS	5		Post-Deployment Stabilization Report; Lessons Learned	Line 32	Add a requirement for audit-ready deployment artifacts per site (readiness evidence, training completion, change approvals, cutover logs, and lessons learned) exportable as PDF + structured data for leadership and compliance review.	19-Mar-26	The Government will consider the recommendation as final revisions are incorporated for the combined synopsis/solicitation.
12	10-Mar-26	PWS	18		Security / Privacy / CUI Handling	Line 23	Recommend explicitly requiring least-privilege access, secrets management, and separation of duties for deployment actions. Include handling requirements for PHI/PII artifacts and secure storage/retention expectations.	19-Mar-26	Refer to PWS Sections 22 and 24 for minimum requirements.
13	10-Mar-26	PWS	14		Accessibility	Line 36	Recommend an explicit 508 compliance gate for deployment artifacts and end-user materials (training, job aids, PDFs). Include required testing (keyboard-only, screen reader) and documented remediation workflow.	19-Mar-26	Requirements may vary by task order based on mission needs and product delivery. See question 3.
14	10-Mar-26	PWS	5		Configuration, Validation, and Implementation; Interfaces	Line 10	Recommend clarifying dependencies and interfaces with existing healthcare systems at each site (identity, network, devices, local apps) and requiring an integration risk register and mitigation plan.	19-Mar-26	Due to the unique requirements at the task order level, clarifying dependencies and interfaces is not feasible across all products for the IDIQ. See question 3. Specifically, for this proposal and risk management, refer to CDRL A003 Deployment Approach and 52.212-1 & 52.212-2.
15	10-Mar-26	PWS	4		Change Control	L122-L126 (anchor L124)	Recommend including a formal change control process for deployment scope changes, site-specific variances, and configuration drift, with approvals and traceable decision history.	19-Mar-26	IAW PWS Section 3.1, the Quality Control Plan (QCP) shall establish a formal Change Control process to manage, document, and validate any modifications to the system or its configuration post-deployment. Additional requirements, if any, will be included in the task order PWS.
16	10-Mar-26	CDRL A003	1		Exhibit A003 Deployment Approach CDRL	N/A	Recommend that the Deployment Approach CDRL include: site readiness checklist, training plan + metrics, cutover plan, rollback plan, hypercare plan, and a governance/audit artifact package template.	19-Mar-26	Specificity such as this may vary by task order. See question 3.
17	10-Mar-26	PWS	48		Monthly Progress Report - SLA Metrics	Lines 1624–1626	Recommend defining measurable operational metrics (time-to-ready, training completion rate, cutover success rate, post-go-live ticket volume trend, time-to-stabilization) and requiring monthly dashboards.	19-Mar-26	Meaningful metrics may vary by task order. See question 3.
18	10-Mar-26	PWS	48		Monthly Progress Report - Personnel/Training Status	Lines 1613–1623	Recommend requiring a versioned runbook/knowledge base with approval gates and change history, so Tier 1/Tier 2 support can execute consistently across sites and reduce reliance on a small number of SMEs.	19-Mar-26	Specificity such as this may vary by product and task order. See question 3.
19	10-Mar-26	52.212-1&-2	2		Evaluation / Use of AI Tools (Admin Aid)	Line 52	Recommend limiting AI to assistive use cases that improve operational efficiency (ticket summarization, knowledge retrieval, reporting compilation) with mandatory human approval and full logging; prohibit autonomous changes in production without approvals.	19-Mar-26	The Government is unable to discern how this question relates to the 52.212-1 and 52.212-2 because the line number provided (52) references business days and proposal retention.
20	10-Mar-26	Solicitation	6		Factor 2 - Small Business Participation	Lines 254–283	Recommend clarifying how small business participation will be evaluated at the task-order level (teaming, subcontracting plans, and measurable participation targets) to encourage meaningful small business involvement.	19-Mar-26	The Government is considering the practicality of using Small Business Participation as an evaluation factor for the IDIQ competition.
21	10-Mar-26	Solicitation	7		OCI / Proprietary Handling; Support Contractor Access	Lines 301–325	Recommend clarifying the process for marking proprietary information in feedback and confirm whether OCI declarations are required for draft-feedback submissions or only for the formal solicitation response.	19-Mar-26	OCI declarations are not required for the draft RFP feedback submissions. Proprietary information should not be submitted as part of feedback, since all industry questions and comments will be published to SAM.Gov.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
22	10-Mar-26	52.212-1&-2	5		Factor 1 – Challenge Scenario 1a	223	Would Government please confirm and update the draft document clarifying whether, as part of the OCONUS medical center deployment, any datasets are expected to be exchanged with host-nation public health entities (e.g., for disease surveillance), including required data elements, cadence, standards, and sharing approvals.	19-Mar-26	No, this is not part of the Factor 1 Challenge Scenario.
23	10-Mar-26	52.212-1&-2	5		Factor 1 – Challenge Scenario 1a	229	Would Government please confirm and update the draft document clarifying the solution will be centrally hosted (CONUS) or regionally/edge hosted OCONUS, and establishing the latency assumptions/constraints to guide architecture and performance requirements.	19-Mar-26	For the purpose of Factor 1 Challenge Scenario 1a, the solution will be hosted CONUS. For the purpose of Factor 1 Challenge Scenario 1b, if the product is web hosted, it is located CONUS. If the product is not web hosted, it will be located at an individual site.
24	10-Mar-26	52.212-1&-2	5		Factor 1 – Challenge Scenario 1a	229	Would Government please confirm and update the draft document confirming any language and localization requirements (e.g., labels, patient instructions) and identifying applicable host-nation regulatory constraints that could impact design, content, and operations.	19-Mar-26	24a. For the purpose of Factor 1 Challenge Scenario, multilingual materials do not apply. 24b. For the purpose of Factor 1 Challenge Scenario, there are no regulatory constraints that could impact design, content, and operations.
25	10-Mar-26	52.212-1&-2	5		Factor 1 – Challenge Scenario 1b	244	Would Government please confirm and update the draft document indicating any constraints on remote administrative access into those networks, including requirements for jump hosts, multi-factor authentication (MFA), virtual desktop infrastructure (VDI), and approved administrative tools/controls.	19-Mar-26	For the purpose of Factor 1 Challenge Scenario 1b, offerors should assume disconnected, intermittent, and low-bandwidth (DIL) environments and no access to networks remotely.
26	10-Mar-26	52.212-1&-2	6		Factor 1 – Challenge Scenario 1b	241	Would Government please confirm and update the draft document indicating Service-specific networks/enclaves (by Service and environment) and identifying the designated network authority/owner for each to validate connectivity, access, and implementation decisions.	19-Mar-26	For the purpose of Factor 1 Challenge Scenario 1b, offerors should assume multiple Services are applicable.
27	10-Mar-26	52.212-1&-2	6		Factor 1 – Challenge Scenario 1b	249	Would Government please confirm and update the draft document by defining the minimum offline (potentially DDIL) clinical dataset required to meet mission needs (e.g., medications, allergies, notes, vitals, labs, imaging metadata), including required recency, completeness, and access constraints.	19-Mar-26	These details are not required for Factor 1 Challenge Scenario 1b submission.
28	10-Mar-26	52.212-1&-2	6		Factor 1 – Challenge Scenario 1b	241	Would Government please confirm and update the draft document clarifying the cost, licensing, and responsibility model for global multi-site deployments across EUCOM and INDOPACOM: whether each Service will fund and manage its own hardware/software (HW/SW) costs and licenses, or whether the Government expects an integrated service offering that bundles infrastructure, software, licensing, deployment, and sustainment across all sites and Services.	19-Mar-26	The Government is responsible for cost and licensing. For the purposes of Factor 1 Challenge Scenario, assume this would be provided. Offerors shall document any assumptions made within their proposed approach.
29	10-Mar-26	52.212-1&-2	6		Factor 1 – Challenge Scenario 1b	232	Would Government please update the draft document for each OpMed JOMIS deployed system (e.g. BATDOK-J, OpMed CDP, TBLD-M, etc.), with the primary installation platform(s) (rugged laptop, tablet, phone/handheld, edge/local server), required/approved OS and versions (Android, Windows, iOS/iPadOS, Linux), and current deployment counts by theater (EUCOM/INDOPACOM).	19-Mar-26	No, the Government will not provide deployment counts by theater. Offerors should assume that all platforms listed will be used as appropriate to Roles 1 through 3.
30	10-Mar-26	52.212-1&-2	6		Factor 1 – Challenge Scenario 1b	240	Would Government please confirm and update the draft document to include any targeted expansion counts/timeframe for JOMIS systems.	19-Mar-26	Targeted expansion counts and timeframes for JOMIS systems is not part of the Challenge Scenario.
31	10-Mar-26	52.212-1&-2	6		Factor 1 – Challenge Scenario 1b	232	Would Government please confirm and update the draft document by specifying Bluetooth/sensor gateway constraints, encryption expectations for pairing, and data-at-rest and in transit requirements.	19-Mar-26	Offerors should include this in their proposal based on their assumptions.
32	10-Mar-26	52.212-1&-2	6		Factor 1 – Challenge Scenario 1b	234	Would Government please confirm and update the draft document by specifying any pre-approved wearable or other sensors JOMIS systems integrate in the current operations.	19-Mar-26	JOMIS systems do not currently integrate with any wearable or other sensors.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
33	10-Mar-26	52.212-1&-2	6	Y	Organizational Conflict of Interest (OCI) Declaration and Disclosure	280	Would Government please confirm and update the draft document clarifying what "team members" includes for OCI (e.g., subcontractors, vendors/original equipment manufacturers (OEMs), affiliates) and whether "all tiers" extends to indirect suppliers, to ensure consistent coverage and compliance expectations.	19-Mar-26	52.212-1, Contract Documents, OCI Declaration and Disclosure provides offerors an opportunity to identify any known, potential, or perceived OCIs so the Government may perform an independent assessment. "Teams" refers to anyone directly employed by an offeror or anyone employed by a subcontractor.
34	10-Mar-26	52.212-1&-2	7	Y	Organizational Conflict of Interest (OCI) Declaration and Disclosure	303	Would Government please confirm what OCIs will exist with upcoming MHS GENESIS procurements that fall under HCDS including the PMO contracts (Technical Integration, Human Centered Design, Product Management) and the Services Contracts (End User Experience, Help Desk)?	19-Mar-26	At this time there is no known OCI with upcoming contracts. Potential OCI exists with awarded contracts that supports mid-office, back-office, or similar service contracts supporting internal business services. See question 33.
35	10-Mar-26		2	Y	Attachment 16: Organizational Conflict of Interest Declaration and Disclosure	3	"1) had access to non-public information regarding solicitation HT003826RE001 that would assist my Company in obtaining the contract resulting from the solicitation, and 2) has not provided services under any Government contract that put my company in a position to influence the competition under solicitation HT003826RE001." Would Government please confirm and update the draft document describing how the Government will identify organizational conflicts of interest, and providing clearer detail on the contracts, contract vehicles, or vendor relationships that could create an unfair competitive advantage which would result in a company unable to attest to this statement above.	19-Mar-26	See questions 33 and 34.
36	10-Mar-26	52.212-1&-2	6		Factor 2: Small Business Participation	267	Would the Government please clarify and update draft documents indicating that small business goals for this procurement are stand-alone and not cumulative. This is consistent with how small business goals have historically been structured, such that the total small business goal is 12% and any other small business category goals are subsets of the 12% and count toward the 12% goal rather than in addition to it. Additionally, requesting Govt explicitly confirm in the draft document that Total SB 30% is not applicable for evaluation or reporting under this requirement.	19-Mar-26	The Government is considering the practicality of using Small Business Participation as an evaluation factor for the IDIQ competition.
37	10-Mar-26	52.212-1&-2	6		Factor 2: Small Business Participation	267	Would Government please confirm and update the draft document to indicate the small business goals are based on total subcontracted dollars.	19-Mar-26	See question 36
38	10-Mar-26	52.212-1&-2	6		Factor 2: Small Business Participation	269	Factor 2 (page 6, line 256) allows offerors to claim small business credit for second- and third-tier subcontractors; however, it is unclear how offerors should apply for and substantiate that credit because the current reporting system (formerly eSRS) does not support second- or third-tier reporting and the Federal Acquisition Regulation (FAR) does not define a process. Would the Government please clarify and update the draft RFP to specify the required reporting method, reporting cadence, and required data elements needed to support second- and third-tier small business credit, and also confirm how the Government will verify that second- and third-tier subcontractors qualify as small businesses for credit.	19-Mar-26	See question 36
39	10-Mar-26	52.212-1&-2	6		Factor 2: Small Business Participation	281	Would the Government please clarify and update the draft document accordingly indicating what evidence is required to demonstrate prior achievement of small business subcontracting goals, including whether ISRs are required. Given the volume of contracts held by many large business Offerors, compiling ISRs across all prior contracts could result in an excessive number of pages for Government review. If ISRs are required, would the Government please consider limiting submissions to no more than three representative contracts and confirm this approach is acceptable for evaluation.	19-Mar-26	See question 36

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
40	10-Mar-26	52.212-1&-2	7		Factor 2: Small Business Participation	329	In accordance to FAR 52.219-Pursuant to FAR 52.219-9, subcontracting plans must include estimated dollar amounts to be subcontracted. Given that this procurement is an IDIQ contract, would the Government please clarify the basis Offerors should use to determine the total contract value for purposes of preparing the subcontracting plan such as the IDIQ ceiling, a Government-provided estimated ordering value, or another specified baseline.	19-Mar-26	See question 36
41	10-Mar-26	52.212-1&-2	N/A		General	N/A	Would Government please confirm how task orders will be structured under this contract? For instance, will there be separate task orders for all deployment efforts in particular regions and/or will there be task orders for specific functions included in the scope to allow for centralization, standardization, and efficiency of those efforts (e.g., training, adoption and change management)?	19-Mar-26	Task order requirements may be grouped by product, region, or other logical manner which supports end-to-end deployments. See question 3.
42	10-Mar-26	PWS	13		SOFA	Section 11	Would Government please update the PWS to indicate locations where Government expects contractors to travel as needed and/or relocate for the performance of the work.	19-Mar-26	Services are applicable to Continental United States (CONUS) and Outside Continental United States (OCONUS) locations, covering various roles of care and facility types as specified in individual task orders.
43	10-Mar-26	52.212-1&-2	2		2.2 Proposal Submission Instructions	64-65	What is the anticipated proposal timeline for this opportunity and other opportunities in the HCDS portfolio?	19-Mar-26	The Government anticipates posting the combined Deployment Solutions synopsis/solicitation in March 2026 for ten days. Contractors should continue monitor SAM.Gov for other opportunities.
44	10-Mar-26	52.212-1&-2	5		52.212-2: Evaluation, Basis for Contract Award	213	How does the Government intend to evaluate the scalability of deployment models?	19-Mar-26	The Government is revising 52.212-1 to define scalable, innovative, feasible, and coherent.
45	10-Mar-26	52.212-1&-2	5		52.212-2: Evaluation, Basis for Contract Award	213	The challenge scenarios request innovative and scalable deployment approaches. Please clarify how the Government intends to evaluate the relative quality, innovation, or maturity of approaches.	19-Mar-26	See question 44.
46	10-Mar-26	52.212-1&-2	6		Factor 1, Challenge Scenario 1b Scope	240-241	For Challenge Scenario 1b (52.212-1, Page 6, Lines 240-241): The phrase "over five sites/units" is ambiguous. We recommend the government provide a maximum number of sites to clarify the requirement.	19-Mar-26	This will be revised in the combined synopsis/solicitation.
47	10-Mar-26	52.212-1&-2	7	Y	Organizational Conflict of Interest	301-306	In the draft HCDS acquisition strategy published on December 22, 2025, the Government indicated potential OCI across the various workstreams. We request the government provide specific examples or guidance on what constitutes OCI as it relates to the Deployment Solutions contractor, product vendors, or other parties.	19-Mar-26	See Questions 33-34. An OCI with future contracts should be addressed as requested by that specific RFP. As the Government continues to refine future contract requirements, OCI will be further defined. As a general rule: To prevent an unfair competitive advantage, contractors and subcontractors performing "mid-office" or "back-office" support functions are generally prohibited from working on prime mission products. This is because their support role, which often involves providing strategic input and recommendations to the Government, could create an Organizational Conflict of Interest.
48	10-Mar-26	52.212-1&-2	8		52.212-2: Evaluation, Basis for Contract Award	374	Will task orders be competed among all contract holders using FAR 16.505 procedures?	19-Mar-26	Unless an exception applies the intent is to compete all task orders are competed. See Revolutionary FAR Overhaul (RFO) 16.507-2.
49	10-Mar-26	52.212-1&-2	8		52.212-2: Evaluation, Basis for Contract Award	362-365	Over what period will the minimum guarantee be ordered (e.g., within first 12 months)?	19-Mar-26	The minimum guarantee will be obligated within the ordering period of the IDIQ.
50	10-Mar-26	52.212-1&-2	8		52.212-2: Evaluation, Basis for Contract Award	n/a	Will the Government assess the offeror's prior operational experience or past performance when evaluating the realism and feasibility of challenge scenario responses?	19-Mar-26	No, pursuant to 52.212-2 Factor 1 Challenge Scenario to be rated Acceptable, the offeror's proposal must meet the minimum requirements for each applicable sub-factor.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
51	10-Mar-26	52.212-1&-2	8		Volume IV Contract Documents, Item (6)	351-355	Will "Addendum 3 - Pre-Award Identification and Assertion of Restrictions on Commercial Technical Data and Commercial Computer Software" be provided in a bidders library? What format/template should offerors use for data rights assertions if Addendum 3 is not available?	19-Mar-26	Addendum 3 Pre-Award Identification and Assertion of Restrictions on Commercial Technical Data and Commercial Computer Software will be provided in the complete terms and conditions within combined synopsis/solicitation. Addendum 3 was not provided in the draft RFP.
52	10-Mar-26	52.212-1&-2	9		52.212-2: Evaluation, Basis for Contract Award	413	Please clarify the specific objective criteria that will be used to determine whether a response to the challenge scenarios is feasible and coherent.	19-Mar-26	See question 44.
53	10-Mar-26	52.212-1&-2	9		52.212-2: Evaluation, Basis for Contract Award	373-376	What evaluation methodology will the Government use for task order competitions among multiple awardees (per FAR 52.212-1, Page 9, Lines 373-376)? For example, Best Value Trade-Off?	19-Mar-26	For each task order competition the Government will publish specific evaluation criteria for the unique requirement.
54	10-Mar-26	52.212-1&-2	9		FACTOR 1: CHALLENGE SCENARIO	420-465	Factor 1 Sub-Factors 1 & 2 require offerors to provide their approach to meet each line item in the sub-factor. Lines 421 and 430 state that: " <i>The proposal must describe...approach that ...</i> " Factor 1 Sub-Factors 3-5 requires offerors to demonstrate their approach. Lines 443, 454, and 462 state that: " <i>The proposal must demonstrate...approach that ...</i> " Does the Government want offerors to provide corporate experience or past performance demonstrating where they have applied their approach only for sub-factors 3-5 (and not 1 & 2)?	19-Mar-26	No, offerors should not provide experience or past performance in response to the Sub-Factors. The Government will revise Sub-Factors 3-5 accordingly.
55	10-Mar-26	52.212-1&-2	9		FACTOR 1: CHALLENGE SCENARIO	420-465	Factor 1 Sub-Factors 1 & 2 require offerors to provide their approach to meet each line item in the sub-factor. Lines 421 and 430 state that: " <i>The proposal must describe...approach that ...</i> " Factor 1 Sub-Factors 3-5 requires offerors to demonstrate their approach. Lines 443, 454, and 462 state that: " <i>The proposal must demonstrate...approach that ...</i> " To correctly address the different terms (describe vs demonstrate) used in the sub-factors, should offerors provide an approach to address sub-factors 1 & 2 and provide corporate experience to demonstrate where they have implemented their approach for sub-factors 3-5?	19-Mar-26	See question 54.
56	10-Mar-26	52.212-1&-2	10		M: Evaluation Criteria, Sub-Factor 4	459	How will the Government evaluate deployment and training approaches when determining whether a 'low-to-no touch' deployment model meets the Acceptable threshold?	19-Mar-26	The approach is feasible, coherent and has a reasonable expectation of successful performance.
57	10-Mar-26	52.212-1&-2	10		M: Evaluation Criteria, Sub-Factor 4	459	Will the Government provide CLINS to support purchase of ODCs required for deployment?	19-Mar-26	Yes, the combined synopsis/solicitation contains a schedule listing all anticipated CLINS to include ODCs and travel. For the Factor 1 Challenge Scenario offerors should assume hardware is provided.
58	10-Mar-26	52.212-1&-2	10		M: Evaluation Criteria, Sub-Factor 4	454-455	How will the Government evaluate the extent to which an approach "leverages existing curriculum" (52.212-1, Page 10, Line 455)?	19-Mar-26	Offerors should take into account curriculum exists, meaning offerors do not have to develop curriculum in its entirety in their proposed approach. However, based on the offerors assumptions, revisions to the existing training curriculum may be required.
59	10-Mar-26	52.212-1&-2	9, 10, 11		52.212-2: Evaluation, Basis for Contract Award	N/A	To support preparation of compliant and consistent responses, could the Government clarify the criteria evaluators will use to determine whether each evaluation factor meets the Acceptable threshold?	19-Mar-26	Pursuant to 52.212-2 Factor 1 Challenge Scenario to be rated Acceptable, the offeror's proposal must meet the minimum requirements for each applicable sub-factor. For Supply Chain Risk, to be rated Acceptable the offeror's proposal must meet the following minimum requirements provide a feasible and coherent approach to identify, assess, and mitigate supply chain risks associated with hardware, software, and firmware, and confirm compliance with DFARS 252.204-7017, DFARS 252.204-7018, FAR 52.204-8 Deviation, FAR 52.204-26, 52.240-90, and 52.240-91 requirements. See question 36 for Small Business Participation.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
60	10-Mar-26	52.212-1&-2	a		52.212-2: Evaluation, Basis for Contract Award	362-365	What are the IDIQ contract ceiling (maximum dollar value) and minimum guarantee (per awardee) for this procurement?	19-Mar-26	See clause 52.216-19 Order Limitations in the combined synopsis/solicitation when released.
61	10-Mar-26	52.212-1&-2	n/a		52.212-2: Evaluation, Basis for Contract Award	n/a	We recommend that the Government provide an estimated annual volume of task orders anticipated under the Deployment Solutions vehicle.	19-Mar-26	Due to the everchanging mission needs, an estimate of annual volume is not meaningful. An estimated volume is not necessary in either 52.212-1 or 52.212-2.
62	10-Mar-26	52.212-1&-2	n/a		52.212-2: Evaluation, Basis for Contract Award	n/a	Please clarify whether the Government expects offerors to provide specific deployment timelines, resource models, or staffing concepts in response to the challenge scenarios.	19-Mar-26	Offerors shall propose estimated deployment timelines based on the scenario provided, the offerors assumptions and the proposed response.
63	10-Mar-26	52.212-1&-2	n/a		52.212-2: Evaluation, Basis for Contract Award	n/a	Will price be evaluated at the task order level for deployment services.	19-Mar-26	Yes, price will be evaluated at the task order level.
64	10-Mar-26	52.212-1&-2	n/a		52.212-2: Evaluation, Basis for Contract Award	n/a	Will the Government establish standardized labor categories or rate structures that will apply to future task order competitions.	19-Mar-26	The Government does not anticipate establishing standardized labor categories or rate structures for the IDIQ.
65	10-Mar-26	52.212-1&-2	n/a		52.212-2: Evaluation, Basis for Contract Award	n/a	Does the Government anticipate task orders to include both Federal EHR deployment services and Operational Medicine deployment services under the same competition?	19-Mar-26	See question 41.
66	10-Mar-26	52.212-1&-2	n/a		52.212-2: Evaluation, Basis for Contract Award	n/a	Will task orders be structured around geographic deployments, facility-level deployments, or functional service areas such as integration, training, and sustainment?	19-Mar-26	See question 41.
67	10-Mar-26	52.212-1&-2	n/a		52.212-2: Evaluation, Basis for Contract Award	n/a	Will the Government provide surge support CLINS at the task order level?	19-Mar-26	A surge support CLIN is available for future task orders.
68	10-Mar-26	PWS	11		5 Transition Period	380-408	Is there a current incumbent contractor(s) providing DHMS deployment services under this or a related contract vehicle? If so: - What is/are the incumbent(s) contract number(s)? - Will the incumbent provide transition support (documentation, knowledge transfer) to awardees? - What historical deployment data, lessons learned, or SOPs will be made available during the 30-day transition-in period (PWS Page 11, Lines 381-387)?	19-Mar-26	68a. While not a direct follow-on, aspects of this acquisition have been performed under N0003915D0044 (Leidos, Inc.), HT003821D0001 (Cherokee Nation), HT003823C0009 (Ellumen, Inc.), HT003824C0004 (Accenture Federal Services, LLC), and HT003825C0003 (Advancia Aeronautics, LLC). 68b. Applicable historical deployment data, lessons learned, or SOPs (if any) will be provided by task order.
69	10-Mar-26	PWS	18		16.4 Cybersecurity Requirements	622-627	What CMMC level (Level 1, Level 2, or Level 3) is required for this contract? Per PWS Page 18, Lines 622-627, the requirement references DFARS 252.204-7021 but does not specify the maturity level.	19-Mar-26	See question 2.
70	10-Mar-26	PWS	7,8		3.5.4 Training	n/a	Is the deployment contractor responsible for providing and maintaining the training environment(s) in coordination with the product vendors?	19-Mar-26	Any requirement for the contractor to provide and/or maintain a training environment will be specified at the task order.
71	10-Mar-26	Solicitation	2		2.2 Proposal Submission Instructions for Bidscale	64-69	Please confirm the file size limitations in Bidscale.	19-Mar-26	1.5 GB per file
72	10-Mar-26	Solicitation	3		2.4 Amendments to Solicitation	140-142	How should amendments to the solicitation be acknowledged? We recommend the amendments be acknowledged in the cover letter of the proposal response.	19-Mar-26	Amendments to the solicitation, if any, shall be acknowledged by digital signature on the SF 30 Box 15 by the offeror's authorized person to sign binding documents.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
73	10-Mar-26	Solicitation	5		Section 3: Support Contractor Proposal Access Consent Form	n/a	Please provide a copy of the Support Contractor Proposal Access Consent Form. This was not attached in SAM.	19-Mar-26	The combined synopsis/solicitation will be revised to instruct offerors to include permission in the Cover Letter.
74	11-Mar-26	PWS	4		3.2 Deployment Planning and Execution	Lines 120–135	Observation: The PWS references deployment activities across multiple locations and operational environments but does not specify the anticipated deployment scale, concurrency, or operational tempo expected during the contract period of performance. Recommendation: We recommend providing additional context regarding expected annual deployment volumes, anticipated number of concurrent deployment waves, approximate number of users supported per deployment site, and expected geographic distribution of deployments (CONUS vs OCONUS). Value: Providing these parameters will enable offerors to design scalable deployment frameworks, develop realistic staffing models, and plan logistics, training, and site preparation activities in a manner that minimizes disruption to healthcare delivery operations while ensuring continuity of care during system transitions.	19-Mar-26	Specificity such as this may vary by product and task order. See question 3.
75	11-Mar-26	PWS	4		3.2 Deployment Planning and Execution	Lines 120–135	Observation: The PWS describes deployment planning activities but does not explicitly address strategies for maintaining continuity of clinical workflows during system transition events. Large healthcare system deployments frequently require coordination with clinical leadership to ensure that patient care delivery is not disrupted during system cutover and activation periods. Recommendation: We recommend clarifying whether deployment approaches should include clinical workflow transition planning, coordination with site clinical leadership, and strategies for maintaining patient care continuity during go-live events. Value: Incorporating clinical workflow continuity considerations into deployment planning will reduce operational risk, support clinician adoption, and ensure that patient care delivery remains uninterrupted during system transitions.	19-Mar-26	Please refer to CDRL A003 Deployment Approach.
76	11-Mar-26	PWS	4		3.2 Deployment Planning and Execution	Lines 120–135	Observation: The PWS describes deployment execution activities but does not address governance structures used to coordinate enterprise-scale deployments across multiple facilities and operational environments. Recommendation: We recommend clarifying whether offerors should describe a deployment governance framework that includes centralized program management, site coordination mechanisms, and escalation pathways for resolving operational issues encountered during deployments. Value: Establishing a structured governance model will help ensure consistent deployment execution across geographically distributed sites, improve coordination between Government stakeholders and deployment teams, and support effective risk management during large-scale healthcare system rollouts.	19-Mar-26	Specificity such as this may vary by product and task order; an overall approach to governance is required by CDRL A003 Deployment Approach. See question 3. Specifically, for this proposal, refer to CDRL A003 Deployment Approach and 52.212-1 & 52.212-2.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
77	11-Mar-26	PWS	4		3.2.1 Deployment Readiness Assessment	Lines 140–150	Observation: The PWS requires deployment readiness assessments but does not define the readiness framework or evaluation methodology used to determine site readiness prior to system implementation. Recommendation: We recommend clarifying whether a standardized readiness model will be applied that includes technical readiness (network infrastructure, hardware availability), operational readiness (workflow alignment and clinical governance), user readiness (training completion and adoption readiness), and cybersecurity readiness. Additionally, defining readiness scoring thresholds, remediation procedures, and Government approval gates prior to go-live would improve clarity. Value: Establishing a standardized readiness assessment framework will support consistent evaluation across deployment sites and reduce implementation risk associated with deploying clinical systems into environments that are not fully prepared.	19-Mar-26	Specificity such as this may vary by product and task order. See question 3.
78	11-Mar-26	PWS	5		Operational Medicine Deployment	Lines 220–238	Observation: The PWS describes deployment of Operational Medicine solutions across expeditionary environments such as theater hospitals, naval vessels, and forward resuscitative sites; however, operational constraints within these environments are not clearly defined. Recommendation: We recommend clarifying expected operational conditions including network availability, power constraints, environmental conditions, mobility requirements, and logistics support available for deployed hardware. Value: Providing greater visibility into the operational environment will enable offerors to design resilient deployment architectures capable of supporting reliable clinical documentation and patient care continuity across the full continuum of battlefield and expeditionary medical operations.	19-Mar-26	Offerors shall assume the minimum operational conditions are available. Disconnected, Intermittent, and Limited (DIL) network environments are the expectation for Operational Medicine deployments. Specificity such as this will vary by product and task order.
79	11-Mar-26	PWS	6		3.3 Hardware Delivery and Connectivity	Lines 245–252	Observation: The PWS requires systems to operate in Disconnected, Intermittent, and Limited (DIL) network environments but does not define technical thresholds that characterize those environments. Recommendation: We recommend clarifying expected bandwidth thresholds, frequency and duration of connectivity disruptions, synchronization tolerance levels, and offline data capture expectations. Value: Defining these parameters will allow offerors to design architectures that preserve data integrity, enable reliable synchronization, and support continuous clinical operations despite connectivity limitations.	19-Mar-26	See question 78.
80	11-Mar-26	PWS	6		3.4 Medical Device Connectivity and Validation	Lines 228–231	Observation: The PWS requires integration with medical devices but does not identify device categories, interface standards, or integration responsibilities. Recommendation: We recommend clarifying expected device categories (e.g., imaging systems, laboratory analyzers, patient monitoring equipment, infusion devices), applicable interoperability standards such as HL7, FHIR, and DICOM, and responsibilities for device integration validation and vendor coordination. Value: Providing this information will enable offerors to design integration architectures that ensure safe and compliant interoperability between clinical systems and medical devices.	19-Mar-26	Specificity such as this may vary by product and task order. See question 3.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
81	11-Mar-26	PWS	7		3.5 User Enablement Services	Lines 260–270	Observation: The PWS addresses training and user enablement but does not explicitly reference post-deployment stabilization activities commonly implemented following healthcare system go-live events. Recommendation: We recommend clarifying whether the deployment approach should include post-deployment stabilization or “hypercare” support periods during which deployment teams provide elevated operational support to resolve user issues, optimize workflows, and address system configuration adjustments. Value: Including structured stabilization periods following deployment will improve system adoption, reduce operational disruption, and allow healthcare personnel to transition more effectively to the new system environment.	19-Mar-26	See PWS Section 3.2.3 Stabilization and Transition.
82	11-Mar-26	PWS	7		3.5.4 Training	Lines 260–270	Observation: The PWS outlines training requirements but does not specify the scale or scope of training activities expected during deployments. Recommendation: We recommend clarifying estimated user populations per deployment site, distribution of clinical and administrative roles requiring training, training delivery modalities, and whether Government-provided training materials will be available. Value: Providing this information will allow offerors to develop scalable training programs that accelerate adoption while minimizing disruption to healthcare operations.	19-Mar-26	Specificity such as this may vary by product and task order. See question 3.
83	11-Mar-26	PWS	7		Global User Support	Lines 270–280	Observation: The PWS requires support for a globally distributed user community but does not define workforce coverage expectations across time zones and operational environments. Recommendation: We recommend clarifying expected operational support hours, requirements for on-site versus remote support models, and surge staffing expectations during concurrent deployments. Value: Clarifying these expectations will enable offerors to design workforce models capable of supporting continuous healthcare operations across geographically dispersed medical facilities.	19-Mar-26	Specificity such as this may vary by product and task order. See PWS Section 3.5.3 Consideration of Global User Community.
84	11-Mar-26	PWS	9		3.5.5 Adoption and Change Management	Lines 280–284	Observation: The PWS requires monitoring of user adoption and satisfaction but does not specify performance metrics used to measure adoption success. Recommendation: We recommend defining measurable adoption metrics such as training completion rates, workflow utilization metrics, user satisfaction benchmarks, and operational performance indicators. Value: Clearly defined metrics will enable contractors to implement data-driven change management strategies that improve adoption outcomes and ensure clinical workflows transition successfully to the new system.	19-Mar-26	Specific user adoption metrics may vary by task order based on mission needs and product delivery. Offerors are encouraged to propose unique solutions during these competitions IAW the evaluation criteria.
85	11-Mar-26	PWS	10		3.6 Data Management and Migration	Lines 285–289	Observation: The PWS requires migration of clinical and administrative data but does not specify expected data volumes, legacy system sources, or validation requirements. Recommendation: We recommend clarifying the anticipated scope of data migration, legacy data repositories involved, and Government expectations regarding data validation and reconciliation processes. Value: Providing this information will enable contractors to design migration strategies that preserve clinical data integrity and minimize operational disruption during system transitions.	19-Mar-26	Specificity such as this may vary by product and task order. See question 3.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
86	11-Mar-26	PWS	11		Cybersecurity / RMF Compliance	Lines 286–289	Observation: The PWS references compliance with the DoD Risk Management Framework but does not clarify system authorization responsibilities or security boundary expectations. Recommendation: We recommend clarifying whether deployed systems will operate under existing Government ATOs or require contractor-supported authorization packages and defining RMF documentation responsibilities. Value: Clarifying these requirements will align cybersecurity compliance activities with deployment schedules and reduce delays associated with security authorization processes.	19-Mar-26	The contractor will not be responsible for authorization packages or defining RMF documentation responsibilities. However, the contractor shall comply with any implemented security controls for the product being deployed.
87	11-Mar-26	52.212-1&-2	1		Solicitation Information	Lines 7–10	Observation: The solicitation indicates awards will be made to all technically acceptable offerors and that price will not be evaluated. Recommendation: We recommend clarifying the minimum criteria used to determine technical acceptability across each evaluation factor. Value: Providing additional clarity regarding evaluation thresholds will ensure consistent proposal evaluation and improve alignment between proposal responses and Government expectations.	19-Mar-26	52.212-2 provides the minimum criteria used to determine technical acceptability for each evaluation factor.
88	11-Mar-26	52.212-1&-2	4		3.1 Page Limitations	Lines 157–166	Observation: The solicitation establishes strict page limitations for proposal volumes but does not clarify how graphical content is treated within those limits. Recommendation: We recommend clarifying whether graphics, diagrams, architectural visuals, and tables count toward page limits when used to illustrate technical approaches as well as if smaller font is for graphical content is acceptable . Value: Clarification will ensure consistent proposal formatting across offerors.	19-Mar-26	88a. 52.212-1 Section 3.1 provides for the use of tables, charts, graphs and figures in the proposal in response to the evaluation factors. These are considered to be part of the offeror's proposal and are included as part of the maximum page limits. 88b. 52.212-1 Section 3.2 states that The font size limitation applies to all narrative elements, graphics, art, figures, imported charts, charts, and any other graphical representation that includes text (font type can be varied depending on the medium).
89	11-Mar-26	52.212-1&-2	2		Proposal Submission Instructions	Lines 96–99	Observation: The solicitation indicates that artificial intelligence tools may be used during proposal evaluation to summarize proposal content. Recommendation: We recommend clarifying whether AI tools will be used solely for administrative summarization or will assist evaluators in identifying evaluation themes. Value: Greater transparency regarding the role of AI will ensure fairness and maintain confidence in the evaluation process.	19-Mar-26	See question 6.
90	11-Mar-26	52.212-1&-2	2		Proposal Submission Portal	Lines 65–90	Observation: The solicitation requires proposal submission through the Bidscale portal but does not specify contingency procedures in the event of system outages or submission failures. Recommendation: We recommend clarifying whether alternate submission procedures will be authorized under such circumstances. Value: Providing contingency procedures will ensure fair submission opportunities and reduce risk associated with technical submission issues.	19-Mar-26	Offerors are responsible for completing proposal submissions before the closing date and time; therefore, early submissions are encouraged. Contingency instructions are located in 52.212-1 Section 2.2 Paragraph 3.
91	11-Mar-26	52.212-1&-2	5		Factor 1 Challenge Scenario	Lines 219–238	Observation: The solicitation requires deployment approaches for both Federal EHR modernization and Operational Medicine deployments but does not specify the expected level of operational detail. Recommendation: We recommend clarifying whether responses should emphasize conceptual deployment methodologies or detailed execution plans including staffing structures, logistics planning, and implementation timelines. Value: Clarification will help ensure proposals are aligned with Government expectations for the challenge scenario evaluation.	19-Mar-26	91a. Offerors should propose their deployment methodology/approach based on CDRL A003 and the Sub-Factors listed in the 52.212-2. 91b. The detail of the offerors proposed approach should be based on the details provided in 52.212-1 and 52.212-2, Factor 1 Challenge Scenario, the offerors proposed assumptions, and page limitations (52.212-1, Section 3).

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
92	11-Mar-26	52.212-1&-2	6		Factor 2 Small Business Participation	Lines 254–283	Observation: The solicitation requires evidence of subcontractor participation commitments but does not clarify the form of documentation required. Recommendation: We recommend clarifying whether letters of commitment are required at the time of proposal submission or whether subcontractors may be proposed without formal commitment documentation. Value: Clarification will help offerors structure compliant teaming arrangements while supporting small business participation goals.	19-Mar-26	52.212-1 provides offerors to include Teaming Agreements as part of the Contract Document Volume. For Small Business Participation see question 36.
93	11-Mar-26	CDRL A003	1		Deployment Approach Description	General	Observation: The Exhibit requires submission of a deployment approach but does not clarify the level of methodological detail expected. Recommendation: We recommend clarifying whether responses should address phased implementation activities such as planning, site preparation, deployment execution, validation, and post-deployment operational support. Value: Providing this guidance will ensure offerors present comprehensive deployment strategies aligned with Government expectations.	19-Mar-26	In the context of proposing to 52.212-1 Factor 1 Challenge Scenario, offerors shall propose the necessary details to meet the minimum evaluation criteria listed in 52.212-2.
94	11-Mar-26	CDRL A003	1		Deployment Planning	General	Observation: The Exhibit requires a deployment approach but does not specify whether estimated deployment timelines or milestone schedules should be included. Recommendation: We recommend clarifying expectations regarding deployment timelines, sequencing of activities across sites, and coordination with healthcare operational schedules. Value: Providing this clarification will allow offerors to present realistic implementation timelines that minimize operational disruption.	19-Mar-26	Specificity such as this may vary by product and task order. In the context of proposing to 52.212-1 Factor 1 Challenge Scenario, offerors shall propose estimated deployment timelines based on the scenario provided, the offeror's stated assumptions, and the offerors proposed response.
95	11-Mar-26	CDRL A003	1		Deployment Risk Management	General	Observation: The Exhibit requires a deployment approach but does not explicitly reference risk management planning. Recommendation: We recommend clarifying whether responses should include risk identification frameworks, mitigation strategies, and contingency planning. Value: Including risk management guidance will help ensure deployments are resilient to operational and technical disruptions.	19-Mar-26	Pursuant to 52.212-2 Factor 1 Challenge Scenario, Sub-Factor 1 Program Management and Governance, offerors shall address risk management.
96	11-Mar-26	CDRL A003	1		Technical Environment Integration	General	Observation: The Exhibit references deployment within existing medical environments but does not clarify expectations regarding infrastructure integration. Recommendation: We recommend clarifying expectations for network configuration, hardware integration, and interoperability with existing medical systems. Value: Providing this information will help ensure deployment approaches support safe integration into operational healthcare environments.	19-Mar-26	This is clarified in PWS Section 3.3.1 Network Integration and Configuration and not part of CDRL A003. Based on industry feedback, the Government is revising PWS Section 3. Specificity such as this may vary by product and task order.
97	11-Mar-26	CDRL A003	1		User Adoption Considerations	General	Observation: The Exhibit focuses on deployment execution but does not clarify whether user adoption and change management activities should be included. Recommendation: We recommend clarifying whether training, adoption support, and change management activities should be addressed within the deployment approach. Value: Incorporating adoption strategies into deployment planning will improve user acceptance and system utilization.	19-Mar-26	See box 16 of A003.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
98	11-Mar-26	CDRL A003	1		Multi-Site Deployment Coordination	General	Observation: The Exhibit requires a deployment approach but does not specify expectations for coordinating deployments across multiple locations. Recommendation: We recommend clarifying whether responses should address concurrent deployments, centralized program management oversight, and coordination across geographically distributed medical facilities. Value: Providing this clarification will help ensure offerors propose scalable program management structures capable of supporting enterprise-wide deployments.	19-Mar-26	Specificity such as this may vary by product and task order. In the context of proposing to 52.212-1 Factor 1 Challenge Scenario, offerors shall review the scenarios provided and provide an approach based on the offeror's business decisions.
99	11-Mar-26	CDRL A003	N/A		N/A	N/A	Document was not available to download or render	19-Mar-26	Other offerors were able to download this document. This issue is often related to browser settings for opening PDFs. For the combined synopsis/solicitation, should this occur try downloading the PDF and then opening in the adobe application.
100	11-Mar-26	PWS	2		Purpose and Scope	51-53	The PWS identifies a broad set of integrated deployment services including program management, configuration, training, adoption, and data migration. Does the Government anticipate issuing single task orders covering end-to-end deployment services, or separate task orders for individual functional areas (e.g., program management, deployment execution, training/adoption)? If separate task orders are contemplated, how will the Government ensure integration accountability across vendors, particularly where configuration, workflow design, and training must align to the underlying product selection?	19-Mar-26	The Government anticipates task order awardees to provide the end-to-end services required for a specific deployment, which will be delineated in the specific task orders. See question 3.
101	11-Mar-26	PWS	2		Desired Outcomes/Tasks/Objectives	61	In the event that other services are required from other vendors, does the government intend on contracting with those vendors directly, or are those services required to be contacted by the awardee?	24-Mar-26	IAW PWS Section 3, the contractor shall be responsible for all activities necessary to ensure a seamless transition from project initiation to full operational capability at each deployment site with minimal disruption to ongoing operations. However, specificity will be included in the task order and could include supplies/services to be provided by the Government.
102	11-Mar-26	PWS	3		Program Management	72	For the CDRL's requested, will the government provide the initial templates for these deliverables as well as any other deliverable required during the deployment services TO execution?	24-Mar-26	All CDRLs will be provided as Exhibits in the combined synopsis/solicitation. No additional templates will be provided.
103	11-Mar-26	PWS	3		Core Management Functions	88	The PWS includes both program management governance support and hands-on deployment execution activities. Does the Government intend for the same contractor to provide both deployment execution and program governance support, or are these functions expected to be separated across different task orders or vendors?	24-Mar-26	The program management and governance support functions will likely vary by task order mission need and/or complexity within the scope of the IDIQ PWS. Execution of this task is the responsibility of each task order awardee in the scope of the awarded task order. See question 100.
104	11-Mar-26	PWS	4		Deployment Planning and Execution	130-131	Many commercial health IT platforms employ vendor-specific implementation methodologies and deployment frameworks that are tightly coupled with the product's architecture and lifecycle management model. In some cases, these platforms are delivered with vendor-developed services and toolchains intended to be used together to ensure proper configuration, upgradeability, and sustainment. To what extent does the Government intend to allow contractors to leverage these vendor-developed deployment frameworks, toolchains, and associated services when implementing those platforms under this contract?	24-Mar-26	Specificity such as this may vary by product and task order. All vendor products for deployment will align to approved design patterns and system security requirements. Offerors are encouraged to propose unique solutions during task order competitions IAW the evaluation criteria.
105	11-Mar-26	PWS	5		Configuration, Validation, and Implementation	158	As new capabilities are introduced within the DHMS portfolio, would the Government consider requiring coordination with product vendors or vendor-authorized deployment partners when task orders involve newly introduced capabilities?	24-Mar-26	See question 101.
106	11-Mar-26	PWS	5		Configuration, Validation, and Implementation	164	Given the historical Program operation, will the government own and maintain the clinical workflow and testing requirements that will be utilized as part of the deployment services?	24-Mar-26	The Government anticipates owning and maintaining testing requirements, however, anticipated contractor activities includes product validation (see PWS Section 3.4.2).
107	11-Mar-26	PWS	5		Stabilization and Transition	183	Can the formal transition plan be provided for review for the criteria and process for transition?	24-Mar-26	See question 68.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
108	11-Mar-26	PWS	6		Hardware Delivery and Connectivity	187	Is the intent here to include any local hardware that may be necessary for this deployment (i.e. upgraded desktops, mobile devices, etc...) with the vendor procuring all hardware?	24-Mar-26	See question 101.
109	11-Mar-26	PWS	6		User Enablement Services	218	Section 3.5 outlines extensive training responsibilities for contractors. For commercial product platforms, does the Government anticipate that training curriculum and materials will be developed independently by contractors, or should training leverage product vendor-developed training frameworks and learning content?	24-Mar-26	The Government anticipates contractors will leverage existing product vendor-developed training curriculum whenever suitable. However, specificity such as this may be defined at the task order level. PWS Section 3.5.4 provides additional information related to the development of training materials.
110	11-Mar-26	PWS	11		Period of Performance	379	The period of performance indicates a 1 year and 4 optional years for services, with multiple awardees for the deployment services, should this PoP be aligned to the specific deployment activity?	24-Mar-26	The one-year base and four one-year option periods applies to the IDIQ and defines the maximum ordering period should an option be exercised. Each task order will have a specific period of performance determined based on the unique requirements of the task order.
111	11-Mar-26	52.212-1&-2	5		Factor 1: Challenge Scenario	223	The scope of services within the proposal will be based on 1 medical center, 2 community hospitals, and 5 clinics, with no enterprise services requested within the initial submission?	24-Mar-26	The Government does not understand the question as presented.
112	11-Mar-26	52.212-1&-2	6		Factor 2: Small Business Participation	254	In light of Presidential Executive Order 14173 (Ending Illegal Discrimination and Restoring Merit-Based Opportunity) prohibiting contractors from operating any programs that promote DEI in violation of federal anti-discrimination laws, will DHA modify this requirement of or the applicability of any terms related to the use of minority and women business enterprises as subcontractors to be compliant with the President's Executive Order?	24-Mar-26	See question 36.
113	11-Mar-26	52.212-1&-2	8		Teaming Agreements	346	Does the Government anticipate that contractors may participate as both prime and subcontractor across different task orders, particularly where deployment activities involve specific commercial platforms or technologies for which a contractor may serve as the product developer or specialized implementation partner?	24-Mar-26	The Government does not intend to limit how teaming arrangements are formed as long as it does not create an OCI.
114	11-Mar-26	52.212-1&-2	8		Evaluation Factors	389	Given that many DHMS capabilities are delivered through commercial healthcare platforms with vendor-specific architectures, does the Government anticipate that evaluation criteria will consider demonstrated experience deploying and configuring the specific platforms being implemented?	24-Mar-26	The Government does not intend to evaluate past performance at the IDIQ level. See questions 54, 55, and 132.
115	11-Mar-26	52.212-1&-2	8		Evaluation Factors	389	Many commercial healthcare platforms utilize vendor-developed deployment methodologies and implementation frameworks refined through large-scale commercial deployments. Will the Government consider evaluating the extent to which an offeror's approach aligns with vendor-supported implementation methodologies for the deployed platform?	24-Mar-26	The Government does not intend to evaluate past performance at the IDIQ level. See question 132.
116	11-Mar-26	52.212-1&-2	8		Evaluation Factors	389	For commercial healthcare platforms where the product vendor is responsible for long-term sustainment and lifecycle upgrades, how will the Government ensure that deployment approaches preserve alignment with vendor-supported configuration models and upgrade pathways?	24-Mar-26	See question 165.
117	11-Mar-26	52.212-1&-2	1		Header		Would Government please remove CUI//PROCURE markings from document, since it has been publicly released? Markings require us to handle it differently than other files and seem incorrect given public release of this file.	24-Mar-26	The Government will consider the recommendation as final revisions are incorporated for the combined synopsis/solicitation.
118	11-Mar-26	52.212-1&-2	4		1.1 Proposal Volumes	Table 1	The Table lists Volume I for Factor 1, but Factor 3 (Supply Chain Risk) is not explicitly mapped to a Volume. Please clarify which Volume should contain the Factor 3 narrative and if it is subject to the 20-page limit.	24-Mar-26	The Supply Chain Factor will be mapped to a Volume in the combined synopsis/solicitation and is subject to a 3 page limit.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
119	11-Mar-26	52.212-1&-2	6		FACTOR 2: SMALL BUSINESS PARTICIPATION	Line 254	Comment/Question: "The Factor 2 Small Business Participation goals currently include multiple socioeconomic sub-category targets (e.g., HUBZone, WOSB, SDB) that are typically tailored for large business subcontracting plans [Ref: Lines 261-267]. For a Small Business Prime Offeror that intends to maximize self-performance in accordance with FAR 52.219-14, these rigid sub-category MQRs (Minimum Quantitative Requirements) present an administrative and operational burden that disproportionately favors large businesses with broad subcontracting bases. Recommendation: To prioritize the use of capable Small Business Primes and encourage maximum self-performance, will the Government consider evaluating Factor 2 based on a Total Small Business Participation metric for Small Business Prime Offerors, allowing their primary socioeconomic status (e.g., SDVOSB) to satisfy the cumulative intent of the participation goals?"	24-Mar-26	See question 36.
120	11-Mar-26	PWS	10		Data Management & Migration	3.6	Please identify the primary databases and systems in scope, including where the data is hosted (e.g., on-premises, cloud environments, major platforms) and provide approximate data volumes, for purposes of staffing planning and rough-order-of-magnitude estimating? Rationale: Visibility into key databases, hosting environments, and data volumes will enable offerors to size data management, migration, integration, and performance-tuning efforts more accurately, improving cost realism and technical feasibility.	24-Mar-26	Specificity such as this may vary by product and task order. See question 3.
121	11-Mar-26	PWS	11		Period of Performance	4	Please provide the anticipated period of performance / ordering window for the IDIQ. Rationale: Understanding the anticipated overall contract duration helps offerors plan for long-term staffing, investments, and teaming arrangements, and supports development of lifecycle management and technology-refresh approaches aligned with the Government's planning horizon.	24-Mar-26	The one-year base and four one-year option periods applies to the IDIQ and defines the maximum ordering period should an option be exercised. Each task order will have a specific period of performance determined based on the unique requirements of the task order.
122	11-Mar-26	PWS	29		Minimum Background Investigation	22.2.1	Will the Government permit contractors to clear personnel at the IDIQ level, in anticipation of task order work, so that cleared staff are available to begin work immediately upon task order award? Rationale: Clarifying whether IDIQ-level clearance sponsorship is acceptable will allow offerors to plan clearance pipelines and readiness strategies that support rapid task order execution while aligning with Government security procedures.	24-Mar-26	Awardees shall contact the COR at time of award.
123	11-Mar-26	PWS	36	Y	Organizational Conflict of Interest	23.4	Will the Government specify all existing DHA contracts or programs that it considers to present an actual or potential organizational conflict of interest with this work, so that offerors can assess and disclose any relevant relationships? Rationale: Identifying contracts or program areas that the Government views as presenting OCI concerns will support more accurate and consistent OCI analyses and disclosures by offerors and help mitigate the risk of post-award OCI challenges.	24-Mar-26	The Government can not specifically identify all existing DHA contracts as requested. See questions 34 and 47.
124	11-Mar-26	CDRL A010	10		User Adoption & Change Management	463	Please provide a brief explanation of the intended use, user community, and high-level capabilities of the new product referenced in the requirements, including the general type of product (e.g., software application, platform enhancement, integration layer, or other). Rationale: A high-level description of the new product and its use case will enable offerors to better understand the operational context and dependencies, resulting in more targeted deployment, training, and change management approaches.	24-Mar-26	Specificity such as this may vary by product and task order. For this specific competition, please see 52.212-1 and 52.212-2, Factor 1 Challenge Scenario for details.
125	11-Mar-26	CDRL A010	10		Training	455	We recommend the Government share the existing training curriculum, if any, related to the product or capabilities in scope, including available course materials, job aids, or e-learning content? Rationale: Access to existing curriculum materials will allow offerors to understand the current training baseline, identify gaps, and plan for updates or enhancements without duplicating materials that already meet the Government's needs.	24-Mar-26	Specificity and materials/content available will be provided at task order level upon award.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
126	11-Mar-26	CDRL A010	10		Continuity and Logistics	449-450	We recommend the Government provide a detailed listing of hardware relevant to this effort (e.g., end-user devices, peripheral equipment, servers, or specialized appliances), including quantities and high-level configurations, where it is material to deployment and support? Rationale: A defined hardware baseline helps offerors plan deployment logistics, compatibility considerations, and support models, and reduces the likelihood of misaligned assumptions about the underlying infrastructure.	24-Mar-26	This will be determined at the task order level based on product and locations/environment.
127	11-Mar-26	PWS	9		Security & Compliance Boundaries		The draft PWS requires compliance with NIST SP 800-171, CMMC, RMF, and other cyber requirements, and states that ATO/ATO-C will be obtained and maintained as required at the task order level. Please clarify which systems or environments (e.g., contractor internal systems, Government-hosted environments, or both) are anticipated to be within the security authorization boundary for RMF, CMMC, and ATO expectations for this effort. Rationale: Knowing which systems fall within the security boundary allows offerors to scope compliance activities and associated investments accurately, supporting cost realism and reducing compliance risk for both parties.	24-Mar-26	See questions 86 and 2.
128	11-Mar-26	PWS	2		1. Background	44-47	The RFP describes the scope of the deployments to be supported as including "deployment to operational locations, and additional federal partners, as well as specialized environments where standard network connectivity is limited or unavailable." Does the scope also include the deployment of new, enhanced EHR capabilities to existing MHS GENESIS sites?	24-Mar-26	The scope is intended to include any deployments required by PEO DHMS.
129	11-Mar-26	PWS	2		2. Purpose & Scope	51-53	Will the Deployment Solutions vendor be responsible for negotiating and delivering software licenses for the capabilities being deployed?	24-Mar-26	See question 101.
130	11-Mar-26	Solicitation	6		Factor 2: Small Business Participation	259-266	Please clarify if the Small Business Subcontracting Goals are based on total contract dollar value or on total subcontracting dollars.	24-Mar-26	See question 36.
131	11-Mar-26	Solicitation	8		(5) Teaming Agreements	346-349	To allow flexibility for IDIQ awardees to form the strongest teams for future task orders, awardees should be allowed to add additional teaming partners and to team with other IDIQ awardees for proposals at the task order level.	24-Mar-26	See question 113. Awardees may add additional subcontractors after contract award.
132	11-Mar-26	Solicitation	8		2.0 Evaluation Factors	389-461	In order to assess whether vendors will be capable of actually delivering their proposed approach for the challenge scenarios, the government should consider incorporating an relevant, prime experience criterion as part of the evaluation of an acceptable approach. Alternatively, the government could incorporate experience as an initial evaluation gate.	24-Mar-26	The Government will consider the recommendation as final revisions are incorporated for the combined synopsis/solicitation.
133	11-Mar-26	Solicitation	7	Y	Volume IV (2)	301-306	Please clarify whether the Government intends to prohibit awardees of the Deployment Solutions IDIQ from participating in any other aspects of the combined HCDS acquisition (e.g., PMO activities such as Technical Integration, Human Center Design, or Product Management, or the non-PMO Products or Services work (e.g., End User Experience or Help Desk Tier 1/Tier 2, etc.). In other words, it would be helpful for DHA to clarify that no Organizational Conflict of Interest (OCI) exists between the Deployment Solutions scope and other aspects of the HCDS procurement and memorialize this in the RFP.	24-Mar-26	See question 47.
134	11-Mar-26	Solicitation	7	Y	Volume IV (2)	301-306	Aside from the Acquisition Support contractors (who may assist the Government with requirements development, acquisitions strategy, etc.), it would be helpful if the Government could provide clarification what other type of contracted work scope within the HCDS suite of contracts would conflict with the Deployment Solutions requirement that may result in a government determination that an unmitigable OCI exists.	24-Mar-26	See question 47.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
135	11-Mar-26	Attachment 16, OCI Declaration and Disclosure	2	Y	Offeror's OCI Declaration and Disclosure	Paragraph 3	Attachment 16 references only two types of potential OCIs: 1) an unequal access type of OCI (RFO 9.505-4) and 2) a biased ground rules type of OCI (RFO 9.505-2) and will require offerors to certify that the Company does not have either type of OCI. Does the government intend to omit from the first certification whether an offeror has an impaired objectivity OCI (RFO 9.505-3) or systems engineering and technical direction OCI (RFO 9.505-1)?	24-Mar-26	RFO 9.505-3 does not apply. Only the Government will evaluate proposals. The Government will revise Attachment 16 to provide additional clarity.
136	11-Mar-26	Attachment 16, OCI Declaration and Disclosure	2	Y	Offeror's OCI Declaration and Disclosure	Paragraph 4	Attachment 16 includes a double negative, which makes it difficult for offerors to determine the terms to which they are certifying in the Declaration ("... cannot declare that my Company, including any entity ¹ on my team, does not have an Organizational Conflict of Interest regarding solicitation HT003826RE001...") -- Please confirm whether the Government prefers the certification to be framed affirmatively (e.g., "The Company may have an OCI and is providing disclosure") rather than as an inability to certify the absence of one. --Please confirm whether the disclosure statement sufficient, or if a mitigation plan is also required at this stage.	24-Mar-26	136a. Based on industry feedback, the Government is revising Attachment 16 to be framed affirmatively. 136b. Reference footnote 2 in Attachment 16 associated with disclosure statement ² which reads "The document will identify the company, Governmental agency, contract number, dates of activity, the complete facts relevant to the potential type of conflict, mitigation plans, or other pertinent information for the Government's consideration and review."
137	11-Mar-26	Attachment 16, OCI Declaration and Disclosure	2	Y	Offeror's OCI Declaration and Disclosure	Paragraph 4	Attachment 16 references "information likely relevant to the Government's assessment of whether an OCI exists," which could capture information suggesting a conflict exists as well as information supporting a determination that no conflict exists. Please clarify the relevant standard as it pertains to the certification. Please also clarify whether the requested information is limited to actual OCIs or also extends to potential or perceived OCIs.	24-Mar-26	137a. It is recommended to adopt a broad interpretation of the disclosure requirement. The goal of the OCI declaration is to provide the Government with all necessary information to make an independent assessment. See question 33. 137b. The disclosure shall include any information related to actual, potential, or even perceived OCIs. RFO 9.504 requires the Government to avoid, neutralize, or mitigate significant potential conflicts. This means that even if a conflict is not yet "actual," if there's a reasonable chance it could arise, it must be disclosed. The same applies to "perceived" OCIs, as they can undermine the integrity of the procurement process.
138	11-Mar-26	PWS	N/A		Acquisition Strategy — General	N/A	If DoW elects to deploy new technologies that require net new hardware/devices (i.e., Dragon PowerMics or other non-medical devices), will those be procured by the government, a different contract, or will this be an assumed vendor responsibility. Clarity around this topic would be helpful for completeness of response. Recommendation: Establish a GFP framework for vendor-locked hardware categories, designate JOMIS tactical devices as GFE, and create separate CLINs for Government-directed proprietary hardware. We welcome the opportunity to discuss this further at the industry day.	24-Mar-26	See question 101. Based on early mission needs, an industry day is not planned.
139	11-Mar-26	PWS	N/A		Acquisition Strategy — General	N/A	Will new devices and technology be tested at the FFGAL Federal EHR Functional Governance & Acceptance Lab or a similar testing facility prior to rolling new features out to facilities or will that be assumed in the deployment methodology as provided by vendors. Clarity around this topic would be helpful for completeness of response.	24-Mar-26	Specificity such as this may vary by product and task order.
140	11-Mar-26	PWS	N/A		Acquisition Strategy — General	N/A	The draft PWS contains no small business (SB) set-aside pool, reserve mechanism, or mandatory task-order set-aside language. FAR 19.502-2 requires a determination on total SB set-aside feasibility before issuing unrestricted. . Comparable vehicles include dedicated SB provisions: OASIS+ (6 SB pools), T4NG2 (50% SDVOSB awards), DHA OMNIBUS IV (active SB on-ramp). Additionally, the absence of a SB pool reduces the competitiveness of niche/specialty/and non-traditional vendors from being directly accessible to the government. We recommends considering the inclusion of a SB pool in this procurement. We welcomes the opportunity to discuss SB pool structuring approaches at the industry day.	24-Mar-26	Market Research concluded that there is not a reasonable expectation of obtaining competitive offers from at least two responsible small business concerns.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
141	11-Mar-26	PWS	N/A	Y	Acquisition Strategy — General	N/A	The draft contains no provision limiting how many competing IDIQ teams a single firm may join. In the concentrated MHS GENESIS ecosystem, this silence permits a small number of firms to appear on every competing team, reducing meaningful task-order competition and creating unequal access to information OCIs under FAR 9.505-4. FAR 16.504(c) and 16.505(b) require fair opportunity at the task-order level. Comparable vehicles impose restrictions: SeaPort-NxG limits one MAC per corporate entity; Polaris bars competing offers by entities under common ownership (upheld in SH Synergy v. US, COFC 2023). We recommend the PEO consider limits on multi-team participation by a single corporate family to preserve meaningful task-order competition and require disclosure of all cross-team corporate relationships. We welcome the opportunity to discuss this further at the industry day.	24-Mar-26	The Government does not intend to limit how teaming arrangements are formed as long as it does not create an OCI.
142	11-Mar-26	PWS	8		3.5.4.1 — Training Program Development	Lines 265–266	Section 3.5.4.1 requires the contractor to 'establish a dedicated training environment that mirrors production.' For MHS GENESIS, this requires Oracle Health-provisioned tenant IDs, Oracle-managed database infrastructure, and production data synchronization tools that a deployment contractor cannot independently obtain without DHA and Oracle involvement. Additionally, the deployment vendor will not have context to licensing and sublicensing limitations of software for the non-Oracle components within MHS GENESSI. Recommend that the government limit contractor responsibility to training content development, configuration, and management and include assumptions of access/limitations on available technologies and interfaces in a non-production environment.	24-Mar-26	The Government will revise PWS Section 3.5.4.1, Training Program Development. Establishments of a dedicated training environment will be specified in individual task orders.
143	11-Mar-26	PWS	45–47		33.1 / 33.2 — IMS and CSP Reporting	Lines 1513–1563	Sections 33.1 and 33.2 require biweekly IMS submissions and monthly CSP reports uniformly across all task orders, regardless of size or complexity. Biweekly IMS reporting is associated with EVM-level contracts and higher-dollar cost-plus efforts, not routine services task orders. NDAA FY2024 §827 raised the DoD EVM threshold to \$50M, signaling Congressional intent to reduce oversight burden on smaller efforts. Uniform application of biweekly IMS and monthly CSP reporting disproportionately burdens smaller task orders and may price capable, lower-overhead firms out of competition. Recommendation: Tiered reporting by task-order value: below \$5M, simplified monthly status reports; \$5M–\$20M, detailed monthly reporting; above \$20M, biweekly IMS and full CSP. This aligns with DoDI 5000.74 and preserves Government oversight where it adds the most value.	24-Mar-26	IMS should be maintained at all times as basic project management. This is not EVM level review but ensures all stakeholders are kept abreast of good project management principles ensuring transparency as IMS should be continually updated as changes occur regularly.
144	11-Mar-26	PWS	6, 13		3.3 Hardware Delivery and Connectivity; 12.4.1 Procurement Integrated Enterprise Environment (PIEE), GFP Module 458 Application 13. Contractor Furnished Items and Services	187-191, 460-466, 497-500	The requirement that the contractor "manage the procurement...of all required hardware" and maintaining access to their procurement management tool (PIEE) would imply responsibility for procuring GFE. Does the contractor have authority to purchase on behalf of the Government? If so, what is the process for establishing hardware requirements, approval workflows, purchasing limits, etc. Clarity in this area would help responses.	24-Mar-26	The Government will revise PWS Section 3.3, Hardware Delivery and Connectivity.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
145	11-Mar-26	PWS	4 -5		3.2.1 Initiation and Planning	133-156	Other foundation elements of initiation/planning phase not explicitly mentioned here would be establishing budget/funding expectations, defining success criteria, and creating key stakeholder register. Recommend addressing those if not already contained within the D008 Deployment Readiness Assessment, CDRL A001 Quality Control Plan, or CDRL A003 Deployment Approach.	24-Mar-26	The Government will consider the recommendation as final revisions are incorporated for the combined synopsis/solicitation.
146	11-Mar-26	PWS	5-6		3.2.2 Configuration, Validation, and Implementation 3.4 Product Connectivity and Interface Validation 3.4.1 Medical Device Connectivity and Validation 3.4.2 Product Validation	157 - 171, 201 - 216	States "As specified in the task order, the contractor shall perform configuration, validation, and implementation activities required for deployment, culminating in the formal cutover event" - Recommend clarifying what constitutes sufficient/minimum "validation" prior to cutover, including Testing Documentation / Sign Off expectations. The current wording is vague and may lead to inconsistent interpretation. Product Validation Plan (D012) doesn't appear to address this either.	24-Mar-26	Due to the unique requirements at the task order level, a standardized checklist is not feasible across all products for the IDIQ. See question 3.
147	11-Mar-26	PWS	7		3.5.4 Training	245-294	Seems to focuses on end user training, but it is unclear whether technical / system maintenance training is also expected as part of deployment. Recommend clarifying whether technical/system administration training should be explicitly included in this section or incorporated into the Training Curriculum (CDRL A002)	24-Mar-26	Refer to revised PWS Section 3.5.4.2, Training Delivery.
148	11-Mar-26	PWS	4		Section 3.2.1 – Initiation and Planning	Lines 136-142	CDRL A003 (Deployment Approach) is due 5 days after task order award. This deliverable is described as the 'foundation' for the Implementation Plan and is expected to cover approach/methodology for deployment, training, user adoption, change management, and communications across multiple environments and products. Five calendar days is insufficient time to develop a meaningful, site-specific deliverable. Recommend extending the due date to at least 15 business days after task order award, or allowing submission of a preliminary approach with a final version due within 30 days.	24-Mar-26	Based on anticipated, compressed deployment schedules a 5 day delivery is necessary to ensure the offeror clearly understands the tasks and scope by having a framework presented to the government for feedback.
149	11-Mar-26	PWS	5		3.2.1 Initiation and Planning	Lines 143–151	Please clarify acceptance criteria and approval authority for Readiness Assessment prior to go-live.	24-Mar-26	Specificity such as this may vary by product and task order. See question 3.
150	11-Mar-26	PWS	6		3.3 Hardware Delivery	Lines 186–191	Clarify whether contractors are expected to procure hardware directly or integrate Government-furnished equipment when provided, as this has cost and supply chain implications.	24-Mar-26	See question 101 and 144.
151	11-Mar-26	PWS	7		Section 3.5.2 – Operational Environments	Lines 230-237	The PWS requires the contractor to provide training and user support in 'theaters of war and other locations with DIL network connectivity.' It is unclear whether this requires contractor personnel to deploy to active combat zones. Request explicit guidance on the contractor's responsibility for operational/deployed environments.	24-Mar-26	International travel is expected; however, contractor personnel is not expected to travel to active combat zones. See question 78 for additional DIL information.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
152	11-Mar-26	52.212-1&-2	6		Small Business Participation	Lines 259–268	The solicitation provides minimum small business participation goals for subcontracting. However, because the IDIQ contract is structured as full and open competition and task orders will be competed among all awardees. Industry requests clarification on how these small business participation goals will be achieved and monitored at the task order level. In particular, small business IDIQ awardees may face significant challenges competing for task orders against large businesses with greater resources and deployment capacity. Industry requests clarification on whether the Government intends to encourage small business participation at the task order level through mechanisms such as task order set-asides, evaluation incentives for small business utilization, or other approaches to ensure meaningful participation by small business IDIQ holders.	24-Mar-26	See question 36.
153	11-Mar-26	52.212-1&-2	8		Evaluation Criteria	Lines 374–377	The solicitation indicates that all awardees will compete for task orders with no capability pools established. Industry requests clarification on whether task orders may be set aside for small businesses.	24-Mar-26	Small Business set asides are not anticipated at the task order level.
154	11-Mar-26	52.212-1&-2	4		Section 4.0 – Proposal Instructions (Factor 1 Challenge Scenario)	Table 2	The challenge scenario requires addressing multiple evaluation areas within an 8-page limit. Could the Government clarify whether the intent is for offerors to present a conceptual deployment framework or a detailed operational execution plan?	24-Mar-26	Pursuant to 52.212-1, offerors shall provide a (1) proposed Deployment Approach (A003) (Volume 1: Factor 1 – Challenge Scenario 1a) as well as a (2) proposed Deployment Approach (A003) (Volume 1: Factor 1 – Challenge Scenario 1b). The offeror's proposal must meet the minimum requirements for each of the five sub-factors in 52.212-2.
155	11-Mar-26	PWS	7		3.5.4 Training	Paragraph 1	The PWS describes multiple training-related activities including user enablement and training support. Could the Government clarify whether the proposal response should focus on a high-level training strategy or include detailed training program design elements?	24-Mar-26	For this source selection, offerors should focus on their high-level training strategy and approach as required by PWS Section 3.2.1, 'The Deployment Approach (CDRL A003)'. The proposal should demonstrate the offeror's comprehensive capability and methodology for designing, developing, and executing the full range of training services described in PWS Section 3.5. Detailed training program design elements, such as specific course outlines or schedules, are not expected in the proposal. These will be required at the individual task order level
156	11-Mar-26	52.212-1&-2	4		Section 4.0 – Proposal Instructions (Factor 1 Challenge Scenario)	Table 2	For Challenge Scenario 1b (OpMed in DIL environments), can you clarify if the three low-to-no touch remote training options must include hands-on simulations, or can they be fully virtual (e.g., AI-driven modules)?	24-Mar-26	Offerors may include this in their proposal based on their assumptions. The revised combination synopsis/solicitation will include a definition for "low-to-no-touch" in the PWS Definitions Section 17.
157	11-Mar-26	PWS	1-2		Section 1	Throughout	The PWS references potential expansion to non-DoD partners—could you elaborate on the types of facilities or user bases (e.g., scale beyond 5,000 users) to help tailor our proposed approaches?	24-Mar-26	The PWS establishes the broad capabilities required to support potential deployments to federal partners. The Government cannot speculate on the specific types, scale, or user base of future deployments. The specific scope for any non-DoW deployment will be fully defined at the task order level. Specific to the IDIQ competition see 52.212-1 Challenge Scenario Factor 1 for facility and user base details.
158	11-Mar-26	PWS	20		16.4.9 Supply Chain Risk	Paragraph 1	In Factor 3 (Supply Chain Risk Management Plan), what constitutes 'feasible and coherent' compliance with DFARS 252.204-7017—e.g., must we include specific tools like vulnerability scanners?	24-Mar-26	Pursuant to 52.212-2, the Government will evaluate a statement of compliance to the listed regulations and the offerors approach to identify, assess, and mitigate supply chain risks when hardware, software, and firmware are contractor provided.
159	11-Mar-26	Solicitation		Y			Please clarify if DHMS PMO support contractor, Boston Consulting Group (BCG), or any of its subcontractors have an Organizational Conflict of Interest (OCI) related to this solicitation.	24-Mar-26	See question 47. The PEO DHMS Deployment Solutions RFP is considered "prime mission product."
160	11-Mar-26	Solicitation		Y			Please clarify if DHMS product developers supporting JOMIS or MHS GENESIS have an Organizational Conflict of Interest (OCI) with this solicitation.	24-Mar-26	See questions 47 and 159.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
161	11-Mar-26	Solicitation					Please clarify if Government will require Past Performance as part of the overall solicitation.	24-Mar-26	The Government does not intend to evaluate past performance at the IDIQ level. See question 132.
162	11-Mar-26	PWS	1		1. Background	9-10	Please expand on all of DHMS' current customers.	24-Mar-26	DHMS has customers within the Department of War (DoW), the Department of Veterans Affairs (VA), the United States Coast Guard (USCG), North Atlantic Treaty Organization (NATO)/Coalition partners, and other federal partners including efforts coordinated through the Federal Electronic Health Record Modernization (FEHRM) office
163	11-Mar-26	PWS	1		1. Background	24-26	Please explain the difference between DHMS' scope against the new Digital Health Integration Office (DHIO) scope.	24-Mar-26	PEO DHMS mission is to acquire, develop, and physically deploy specific health IT systems and products to the field. The DHIO mission is to create a single, unified strategy and governance structure for all digital health capabilities across the entire enterprise, ensuring they are clinically-led and integrated. DHIO is a customer to DHMS. DHMS requirements are generated from a functional level out of DHIO for the MHS.
164	11-Mar-26	PWS	1		1. Background	32-34	Please expand on Enterprise Intelligence and Data Solutions' (EIDS) mission similar to DHMSM and JOMIS.	24-Mar-26	The Government will consider the recommendations as final revisions are incorporated for the combined synopsis/solicitation.
165	11-Mar-26	PWS	2		2. Purpose & Scope	49-51	Please confirm that the scope of this PWS is limited to deployment of DHMS products and that the offeror will transition the work to sustainment vendor post stabilization of the site/hospital/clinic.	24-Mar-26	Confirmed. As stated in PWS Section 3.2.3, a core requirement of this contract is the 'Transition to Sustainment,' where the contractor shall 'execute a formal transition plan to hand off the fully deployed and stabilized product(s) to the Government sustainment and operations teams.' The scope of this PWS is focused on deployment activities, culminating in this hand-off. The ongoing, long-term sustainment of the products is outside the scope of this PWS.
166	11-Mar-26	PWS	6		3.3 Hardware Delivery and connectivity	186	Please provide the required hardware configuration for the DHMS products that need to be deployed. Our understanding is that the program office, along with the product developer, would have developed a hardware configuration plan.	24-Mar-26	Correct; hardware configurations are defined for DHMS products. However, specific hardware requirements, configuration details, and product technical specifications are dependent on the unique environment and scope of each deployment. Therefore, this information will be provided as Government Furnished Information (GFI) at the individual task order level. The PWS establishes the broad contractor capability to 'manage the procurement, end-to-end logistics, installation, and network integration of all required hardware' (PWS Section 3.3). The role of the contractor under this IDIQ is to execute the deployment based on the specific hardware and configuration requirements that will be provided for each awarded task order.
167	11-Mar-26	PWS	6		3.3 Hardware Delivery and connectivity	186	Please clarify if there approved vendors to purchase required hardware for DHMS products.	24-Mar-26	The Government does not maintain a list of exclusive 'approved vendors' for the procurement of commercial hardware. However, all hardware procured in support of this contract must comply with all relevant DoW and Federal acquisition regulations. See question 144. Specific hardware requirements will be defined at the individual task order level.
168	11-Mar-26	PWS	7		3.5.4 Training	244	Please clarify if the training content has been developed for DHMS products that need to be deployed.	24-Mar-26	The Government possesses an existing baseline of training curriculum and materials for currently fielded DHMS products. See question 109.
169	11-Mar-26	PWS	7		3.5.4 Training	244	If the training content has been developed for DHMS products that need to be deployed, please clarify where is the training content hosted and how can it be accessed for review before proposal submission.	24-Mar-26	Existing training materials are considered Government property and are hosted within Government-controlled information systems. Access to this content is not necessary prior to contract award.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
170	11-Mar-26	PWS	7		3.5.4 Training	244	Please clarify if the offeror have to improve or enhance the existing training content, or will that be done by the product developer who we assume to be the developer of the training content also.	24-Mar-26	Offerors should not assume that all new content development will be performed by the original product developer. While the Government possesses a baseline of existing curriculum, offerors should anticipate that individual task orders may require the tailoring, enhancement, or development of new training content to meet the specific needs of a given deployment environment, user base, or product version (see PWS Section 3.5.4.1).
171	11-Mar-26	PWS	7		3.5.4 Training	244	Please clarify if the training content been developed by the product developers.	24-Mar-26	See question 170.
172	11-Mar-26	PWS	9		3.5.5 Adoption and Change Management	301	Please clarify if the offeror will be responsible for new and/or adjusted workflows with new product adoption.	24-Mar-26	PWS Section 3.5.5.2 requires the contractor to 'actively and continuously manage the engagement of end-users throughout the design, planning, and implementation process, ensuring their feedback is documented and incorporated to create effective workflows.' The Government maintains final approval authority on all clinical and business workflows.
173	11-Mar-26	PWS	10		3.6.1 Data Migration Execution	367-368	Please clarify if the Government will provide access to legacy systems, data dictionaries, and existing migration tooling, or is the offeror expected to independently develop all extraction and transformation capabilities.	24-Mar-26	Specificity such as this may vary by product and task order.
174	11-Mar-26	PWS	11		3.6.2 Data Validation and Reconciliation	376	Please clarify the offeror's responsibility boundary for data validation versus Government acceptance testing.	24-Mar-26	Contractor's Responsibility: Data Validation. As outlined in PWS Section 3.6.2, the contractor is responsible for performing data validation and reconciliation. Specificity may vary by product and task order. Government's Responsibility: Acceptance Testing. Following the contractor's validation, the Government will perform its own acceptance testing. As described in the same PWS section, this involves Government clinical and administrative SMEs conducting their own spot-checking and analysis to verify and accept the contractor's work. This is a quality assurance function to confirm that the contractor's validation was successful and the data is fit for operational use.
175	11-Mar-26	52.212-1&-2	5		52.212-1, 4.0 Proposal Instructions. FACTOR 1: CHALLENGE SCENARIO	229	Please provide Service-specific hardware and/or networks that the system(s) will need to be integrated with.	24-Mar-26	See question 26.
176	11-Mar-26	52.212-1&-2	6		52.212-1, 4.0 Proposal Instructions. FACTOR 1: CHALLENGE SCENARIO	241	Please clarify what do Roles 1-3 mean with respect to Services in EUCOM and INDOPACOM.	24-Mar-26	See PWS Section 17 Definitions for the definitions of Roles 1-3.
177	11-Mar-26	52.212-1&-2	6		52.212-1, 4.0 Proposal Instructions. FACTOR 1: CHALLENGE SCENARIO	249	Please clarify if Government will provide the list of current hardware that needs integration or is this a 'greenfields' scenario where it is entirely up the offeror to provide.	24-Mar-26	For the purpose of the Challenge Scenario (1a and 1b), these items will be provided and imaged by the Government.
178	11-Mar-26	52.212-1&-2	6		52.212-1, 4.0 Proposal Instructions. FACTOR 3: SUPPLY CHAIN RISK	285	Please clarify if the program office has established standardized or approved hardware vendors and hardware components for hosting and executing the DHMS products.	24-Mar-26	See question 167.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
179	11-Mar-26	52.212-1&-2	6		52.212-1, 4.0 Proposal Instructions. FACTOR 3: SUPPLY CHAIN RISK	285	Please provide the approved hardware vendors and hardware configurations required for JOMIS and DHMS products.	24-Mar-26	See question 167.
180	11-Mar-26	52.212-1&-2	8		52.212-2, 1.0 Basis for Contract Award	362	The solicitation states all awardees will be eligible to compete for any task order with no pools or scope-based limitations. Please describe the anticipated task order evaluation criteria. Please consider to evaluate past performance, relevant experience, and demonstrated familiarity with DHMS products, workflows, and stakeholder ecosystems at the task order level.	24-Mar-26	For each task order competition the Government will publish specific evaluation criteria for the unique requirement.
181	11-Mar-26	52.212-1&-2	8		52.212-2, 1.0 Basis for Contract Award	362	Given that the Government does not intend to establish pools or scope-based limitations, an offeror rated Acceptable in only Challenge Scenario 1b could compete for Federal EHR fixed-facility task orders without having demonstrated capability in that environment. Please clarify how does the Government intend to ensure task order offerors possess the relevant experience and technical competence for the specific deployment type being competed.	24-Mar-26	See question 180.
182	11-Mar-26	52.212-1&-2	8-9		52.212-2, 2.0 Evaluation Factors	396	Given the mission-critical nature of deploying Federal EHR and OpMed products in OCONUS and disconnected and limited-connectivity environments — where failure directly impacts patient care and warfighter readiness — please clarify if the Government will consider adding a Past Performance or Relevant Experience evaluation factor to ensure awardees have demonstrated capability in comparable healthcare IT deployments.	24-Mar-26	See question 180.
183	11-Mar-26	52.212-1&-2	8-9		52.212-2, 2.0 Evaluation Factors	396	Please consider requiring offerors to demonstrate prior experience with MHS GENESIS or OpMed product deployments, or comparable EHR deployments in military treatment facilities, as a minimum qualification for contract award.	24-Mar-26	See question 180.
184	11-Mar-26	52.212-1&-2	9		52.212-2, 2.0 Evaluation Factors	405	Please clarify this paragraph and/or confirm that the culmination of Factors will determine if the bid is deemed 'acceptable'.	24-Mar-26	52.212-2, Table 4, applies to Factor 1. See question 59.
185	11-Mar-26	52.212-1&-2	9		52.212-2, 2.0 Evaluation Factors. FACTOR 1: CHALLENGE SCENARIO	415	Please clarify if Government requires a response to both Challenge Scenarios 1a and 1b, or can the offeror submit one without the other.	24-Mar-26	Both Challenge Scenarios 1a and 1b are required pursuant to 52.212-2, Factor 1 Challenge Scenario. The Government will conduct two separate evaluations of the offeror's proposed Deployment Approach (A003): one for Volume 1: Factor 1 – Challenge Scenario 1a and one for Volume 1: Factor 1 – Challenge Scenario 1b. Proposals with only one Challenge Submission will be considered incomplete. See 52.212-1 Section 2.1(a).
186	11-Mar-26	52.212-1&-2	9		52.212-2, 2.0 Evaluation Factors. Sub-Factor 1: Program Management and Governance	420	Please clarify if offeror will align to DHMS's current governance structures or is the offeror to propose new independent governance structures.	24-Mar-26	Offerors shall propose governance in accordance with the bullets provided in Sub-Factor 1: Program Management and Governance. This applies to the contractor's approach to governance of the Challenge Scenario.
187	11-Mar-26	52.212-1&-2	9		52.212-2, 2.0 Evaluation Factors. Sub-Factor 1: Program Management and Governance	420	Please define current governance structures.	24-Mar-26	See question 186.
188	11-Mar-26	52.212-1&-2	9		52.212-2, 2.0 Evaluation Factors. Sub-Factor 1: Program Management and Governance	420	Please clarify if Government anticipates the need for Functional approval of any/all products into deployment.	24-Mar-26	For the purpose of the Challenge Scenario, offerors should assume all products have gone through a standard process for build/config/test and that a validation will occur at functional level upon completion of deployment.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
189	11-Mar-26	52.212-1&-2	9		52.212-2, 2.0 Evaluation Factors. Sub-Factor 2: Deployment and Integration	433	Please define the accrediting Agencies anticipated for solutions in scenario 1a.	24-Mar-26	The Government expects offerors to research and identify accrediting agencies as part of its proposal.
190	11-Mar-26	52.212-1&-2	10		52.212-2, 2.0 Evaluation Factors. Sub-Factor 3: Continuity and Logistics	449	Please clarify if the offeror will acquire all hardware/software/materials or work with agencies to identify the hardware/software/materials needed.	24-Mar-26	See question 177.
191	11-Mar-26	52.212-1&-2	10		52.212-2, 2.0 Evaluation Factors. Sub-Factor 4: Training	455	Sub-Factor 4 requires offerors to 'leverage existing curriculum.' Please define what constitutes 'existing curriculum' and clarify whether this refers to Government-owned training content or the offeror's proprietary training materials and intellectual property. This distinction significantly impacts how offerors scope their training approach.	24-Mar-26	See question 58.
192	11-Mar-26	52.212-1&-2	10		52.212-2, 2.0 Evaluation Factors. Sub-Factor 4: Training	459	Sub-Factor 4 requires 'at least one option for 1a and three options for 1b' for low-to-no touch remote training delivery. Please clarify the distinction between remote training 'options' versus 'methods'. For example, please clarify if VILT, CBT, and self-guided learning each count as separate options, or does the Government expect three fundamentally different delivery architectures.	24-Mar-26	The Government is seeking contractors to propose innovative options. The definition for low-to-no-touch will be provided in the combined synopsis/solicitation. See question 156.
193	11-Mar-26	PWS	2		Section 2 – Purpose & Scope	Lines 48–56	The PWS states this is a non-personal services contract covering "on-demand deployment" but does not define what triggers a task order or the expected ordering cadence. For a global IDIQ supporting simultaneous deployments across CONUS, OCONUS, and austere environments, offerors need to understand whether task orders will be issued site-by-site, program-by-program (DHMSM vs. JOMIS vs. EIDS), or by functional domain. Without this, contractors cannot realistically staff or price the contract. We request the Government clarify the anticipated task order structure and ordering mechanism.	24-Mar-26	Task order requirements may be grouped by product, region, or other logical manner which supports end-to-end deployments. See question 3.
194	11-Mar-26	PWS	3–4		Section 3.1 – Program Management	Lines 82–86	The PWS designates the PM as the single Government POC for "all matters related to this contract and its subsequent task orders." However, the contract covers three distinct programs (DHMSM, JOMIS, EIDS) with separate PMOs, governance bodies, and stakeholder communities. It is unclear whether one PM can credibly serve as the authoritative contractor representative across all three programs simultaneously, or whether the Government envisions separate program-level PM structures under the IDIQ. We request clarification on whether the PM requirement is at the IDIQ level, the task order level, or both.	24-Mar-26	PWS Section 3.1 will be revised as follows: The contractor shall designate a primary Program Manager (PM) who will serve as the Government's single point of contact and be responsible for the overall management of the contract. While the contractor may designate other points of contact at the Task Order (TO) level, the primary PM is the one individual authorized to act on behalf of the contractor for all matters related to this contract. This primary PM is ultimately responsible for coordinating all contract performance, including resource allocation, risk mitigation, and ensuring clear communication with the Government's Contracting Officer's Representative (COR).

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
195	11-Mar-26	PWS	6		Section 3.3.1 – Network Integration and Configuration	Lines 192–200	The PWS requires the contractor to configure products to operate autonomously in DIL environments "encompassing the full range of operational platforms from server-based theater hospital products to mobile, point-of-injury data capture solutions." However, the PWS does not define who owns, provides, or manages the underlying network infrastructure (e.g., tactical communications networks, SIPRNet, coalition networks) and where contractor responsibility ends. In austere OCONUS environments, failure to clearly delineate the Government's network responsibilities from the contractor's integration responsibilities creates an unmanageable risk of scope disputes. We request the Government define the boundary of contractor network responsibility versus Government-furnished infrastructure in DIL environments.	24-Mar-26	The Government is responsible for providing and managing the underlying network infrastructure, including any tactical, strategic, or coalition communication networks (e.g., SIPRNet, tactical radio networks). This network infrastructure is considered a Government Furnished Service. The contractor's responsibility, as outlined in PWS Section 3.3.1, is to ensure seamless integration with this Government-furnished network infrastructure. The contractor is responsible for the configuration of the DHMS products and any associated deployment hardware to successfully operate over these networks. This includes testing all configurations and firewall rules needed for the product to function correctly within the provided network environment. The specific characteristics, limitations, and points of interface for the Government-furnished network will be defined at the individual task order level.
196	11-Mar-26	PWS	6		Section 3.4 – Product Connectivity and Interface Validation	Lines 201–216	The PWS requires the contractor to validate interfaces with "financial and administrative systems as specified in the task order" but does not identify what those systems are whether DEERS, AHLTA, legacy billing systems, or other DoW enterprise platforms. Interface validation with unknown downstream systems creates a significant unknown cost driver and technical risk at the task order level. We request the Government provide, even at a high level, a representative list of financial and administrative systems contractors should anticipate interfacing with under this contract.	24-Mar-26	The Government acknowledges the need for clarity on potential system interfaces. While the specific financial and administrative systems will be defined at the individual task order level, offerors should anticipate the need to validate interfaces with a range of standard DoW enterprise systems.
197	11-Mar-26	PWS	7–8		Section 3.5.2 – Consideration of Operational Environments	Lines 229–237	The PWS states the contractor "shall possess the capability to provide training, adoption, and user support services to users in operational environments, including theaters of war." However, it does not address contractor personnel safety, Rules of Engagement coordination, or force protection responsibilities when contractor staff are deployed in or adjacent to active combat zones. This is a material omission for any contractor considering OCONUS OpMed deployments at Roles 1–2. We request the Government clarify what force protection, casualty evacuation (CASEVAC), and duty-of-care obligations the Government assumes for contractor personnel deployed in active or near-combat environments, and whether a DoD-sponsored contractor status (e.g., SPOT registration) is required.	24-Mar-26	See question 151. Regulatory guidance for contractor international travel applies. Contractor personnel will be processed through the Synchronized Pre-deployment and Operational Tracker (SPOT) system. This process ensures that deploying contractor personnel are provided with the necessary Government support. Specific requirements for SPOT registration, pre-deployment preparations, and adherence to all theater-specific operational procedures will be explicitly defined in any task order requiring deployment into a designated operational area.
198	11-Mar-26	PWS	10		Section 3.6.1 – Data Migration Execution	Lines 366–374	The PWS requires "Data Seeding" as a critical pre-deployment task for field units, including pre-loading patient demographics, formularies, and clinical templates. However, the PWS does not address the data governance or authorization chain for pre-loading PHI onto mobile/ship-based servers prior to a unit's deployment. HIPAA and DHA Privacy requirements (Sections 24–29) require DSAs and PIAs for any PHI accessed or stored by the contractor. It is unclear whether the Government will have DSAs and system authorizations in place before each Data Seeding event, or whether the contractor is expected to initiate those agreements per task order. We request the Government clarify the pre-authorization framework for Data Seeding activities involving PHI, including who executes the DSA and at what point in the task order lifecycle.	24-Mar-26	It is not anticipated that contractors will need to store PHI/PII. Further data seeding responsibilities will be defined within the applicable task orders.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
199	11-Mar-26	PWS	11-12		Section 5.1 / 5.2 – Transition In/Out	Lines 382-408	The PWS requires Transition-In to be completed in 30 days and Transition-Out to begin 60 days prior to contract end. For an IDIQ with simultaneous active task orders across multiple sites and programs, the transition-in/out obligations could overlap or conflict particularly if a successor contractor is onboarding while the incumbent is still executing active deployments at other sites. The PWS does not address how overlapping task order performance and transition obligations will be managed. We request the Government address whether transition obligations are at the IDIQ level or the individual task order level, and how concurrent active task orders are handled during a contract-level transition.	24-Mar-26	Transition-In and Transition-Out activities apply at the task order level. See question 68.
200	11-Mar-26	PWS	13		Section 11 – Status of Forces Agreements (SOFA)	Lines 437-446	The PWS places the full burden of SOFA documentation completion on the contractor at least 90 days before travel, and states the Government will "identify SOFA POCs." However, for OpMed deployments in EUCOM and INDOPACOM with uncertain and rapidly changing schedules (as described in Challenge Scenario 1b), the 90-day lead time may be incompatible with operational tempo. More critically, SOFA status can change with geopolitical events entirely outside both the contractor's and the Government's control. The PWS does not address what happens to task order performance or contractor liability if SOFA conditions change or are denied after a task order has been issued. We request the Government address contractor recourse and schedule relief when SOFA conditions are not met through no fault of the contractor.	24-Mar-26	The Government acknowledges that obtaining the required approvals under a Status of Forces Agreement (SOFA) is a dependency for OCONUS travel and is subject to factors sometimes outside the contractor's direct control. In the event that a required SOFA approval is delayed or denied through no fault of the contractor, and this impacts the contractor's ability to meet the performance requirements of the task order, the issue will be handled in accordance with FAR Clause 52.249-14, Excusable Delays. The Contracting Officer will work with the contractor to determine an appropriate and equitable adjustment to the task order schedule and/or requirements.
201	11-Mar-26	PWS	8-9		Factor 1 – Challenge Scenario Evaluation	Lines 408-461	The evaluation states the Government will conduct two separate evaluations for 1a and 1b, and that an offeror is Acceptable if it receives Acceptable in either scenario. However, all awardees are eligible to compete on any task order regardless of which scenario they passed. This means an offeror with no demonstrated Federal EHR deployment capability (only 1b) could receive task orders for large fixed-facility OCONUS deployments, and vice versa. The stated rationale is that "pools or scope-based limitations" will not be established but there is no mechanism to ensure minimum technical competency for task order types. We request the Government clarify how technical differentiation between EHR-capable and OpMed-capable contractors will be handled at the task order competition level, to protect mission-critical deployments from contractors without relevant experience.	24-Mar-26	For each task order competition the Government will publish specific evaluation criteria for the unique requirement.
202	11-Mar-26	PWS	2		2 – Purpose and Scope	Lines 48-56	The PWS describes an on-demand deployment capability supporting both CONUS and OCONUS healthcare environments. Industry recommends clarifying expected deployment planning assumptions, including: estimated number of deployments per year, expected number of simultaneous deployments, typical deployment team sizes. This information would allow offerors to design scalable deployment frameworks capable of supporting surge operations.	24-Mar-26	Specificity such as this may vary by product and task order. See question 3.
203	11-Mar-26	PWS	3		3.1 Program Management	Lines 71-80	The PWS requires a program management framework with governance, risk management, and reporting responsibilities. Industry recommends clarifying the expected governance cadence, such as: Deployment Readiness Reviews Clinical Governance Boards Change Control Boards Executive Steering Committees. Providing this information will allow offerors to properly staff program governance functions.	24-Mar-26	Specificity such as this may vary by product and task order; an overall approach to governance is required by CDRL A003 Deployment Approach. See question 3. Specifically, for this proposal, refer to CDRL A003 Deployment Approach and 52.212-1 & 52.212-2.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
204	11-Mar-26	PWS	4		Risk and Issue Management	Lines 104–107	The PWS requires contingency planning for risks such as network failures and schedule delays. Industry recommends clarifying expectations for deployment contingency procedures, including: - system rollback procedures - offline documentation capabilities - synchronization of patient records after connectivity restoration. These considerations are particularly important for expeditionary medical environments.	24-Mar-26	The offeror's Deployment Approach (A003), as part of its risk management and continuity planning, should describe the contractor's proposed methodology for addressing these types of contingencies. The Government is seeking offerors who can demonstrate a robust, well-conceived technical and procedural approach to ensuring operational continuity in all deployment environments. The specific, detailed contingency procedures will be finalized as part of the Implementation Plan at the task order level.
205	11-Mar-26	PWS	5		Deployment Planning and Execution	Lines 136–143	The PWS identifies the Deployment Approach (A003) as the foundation for the Implementation Plan (A010). Industry recommends clarifying whether the Government maintains a standardized deployment framework for DHMS programs or whether offerors should propose their own methodologies. Standardized readiness frameworks improve consistency across multiple deployment waves.	24-Mar-26	The offeror's Deployment Approach (A003) should detail the contractor's own corporate methodologies, processes, best practices, and tools for executing the full range of services described in the PWS. The Government is seeking contractors who can bring innovative and efficient methodologies that are also adaptable.
206	11-Mar-26	PWS	6		Hardware Delivery and Connectivity	Lines 186–191	The contractor is responsible for procurement, delivery, installation, and network integration of hardware. Industry recommends clarifying whether hardware will be: - Government Furnished Equipment (GFE) - contractor-procured as ODCs - procured via separate acquisition vehicles. This clarification would significantly improve cost estimation accuracy.	24-Mar-26	See question 144.
207	11-Mar-26	PWS	7		User Enablement Services	Lines 217–221	The PWS requires global training support across a diverse user base. Industry recommends providing planning assumptions for: - number of users trained per deployment - number of clinical roles supported - expected instructor-to-student ratios. These assumptions will help offerors design effective training delivery models.	24-Mar-26	Specificity such as this will vary by product and task order.
208	11-Mar-26	52.212-1&-2	4		Table 2 – Proposal Volumes / Page Limitations	157–164 and 196–203	Factor 1 The 8-page limit per scenario (1a and 1b) has to cover all five sub-factors: Program Management, Deployment and Integration, Continuity and Logistics, Training, and User Adoption. That's a lot of required content for 8 pages each. Same concern as Factor 2 - page limit versus content density. The evaluation states an Acceptable in either 1a or 1b is sufficient for award, but also says all awardees compete for all task orders regardless of which scenario they passed. Industry may want clarification on whether task order scope will be differentiated by scenario performance in practice.	24-Mar-26	208a. Pursuant to 52.212-1, Volume I, Factor 1 Challenge Scenario page limit is 8 pages for Challenge Scenario 1a and an additional 8 pages for Challenge Scenario 1b. 208b. See question 36 regarding Factor 2 Small Business Participation. 208c. Awardees may submit No Bid submissions at the task order level. 208d. See questions 53 and 180 regarding task order evaluation criteria.
209	11-Mar-26	52.212-1&-2	4		Table 2 – Proposal Volumes	196–201	Factor 2 The 2-page limit for the Factor 2 narrative may be tight given everything required in that section (name, address, NAICS, complexity, % and \$ for subs up to 3 tiers plus the narrative itself). Could be worth raising as a comment.	24-Mar-26	See question 36.
210	11-Mar-26	52.212-1&-2	4		Table 2 – Proposal Volumes	196–201	Factor 3 3-page limit may be tight relative to the six specific regulatory clauses and full SCRM methodology required across a complex multi-environment deployment contract for Factor 3	24-Mar-26	Pursuant to 52.212-2, the Government will evaluate a statement of compliance to the listed regulations and the offerors approach to identify, assess, and mitigate supply chain risks when hardware, software, and firmware are contractor provided. The 3 page limit will remain unchanged for the combined synopsis/solicitation.
211	11-Mar-26	CDRL A003	1				As for the PWS, the Deployment Approach (CDRL A003) is due 5 days after task order award - that's very tight for a document described as the foundation for the entire Implementation Plan. Worth flagging. Also the fact that is isn't rendering for everyone.	24-Mar-26	See question 148 regarding the 5 day due date for CDRL A003. See question 99 for document rendering.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
212	11-Mar-26	PWS	5		3.2.2 Configuration, Validation, and Implementation	164	Can the Government clarify whether hardware supporting DHMS deployments will be provided as Government-Furnished Equipment (GFE), through OEM-provided solutions, or procured by the Deployment Solutions contractor? Understanding the expected hardware sourcing model will help offerors structure deployment, integration, and logistics approaches appropriately.	24-Mar-26	See question 144.
213	11-Mar-26	PWS	10		3.6.1 Data Migration Execution	373	The PWS references contractor responsibility for data migration activities including ETL, data seeding, and migration validation. Can the Government clarify whether migration tooling, integration platforms, or data transformation utilities will be Government-provided or expected to be contractor-provided?	24-Mar-26	Specificity such as this will vary by task order.
214	11-Mar-26	PWS	10		3.6 Data Management and Migration	363	Given the critical importance of clinical data integrity during EHR deployments, will the Government consider structuring task orders that support independent data quality validation activities separate from the primary deployment implementation team to provide objective verification of migration completeness and accuracy?	24-Mar-26	The Government will consider the recommendation for future task order requirements.
215	11-Mar-26	PWS	1		1. Background	27	The PWS describes deployments across operational medicine environments including naval vessels, field hospitals, and forward resuscitative units. Can the Government clarify the extent to which Service-specific infrastructure, networks, and deployment support will be provided by the respective Military Services versus the Deployment Solutions contractor?	24-Mar-26	See question 195.
216	11-Mar-26	Solicitation	8		1.0 Basis for Contract Award	34	Does the gov't anticipate setting aside task order for small business set asides?	24-Mar-26	The Government does not anticipate setting aside task orders for small business at this time.
217	11-Mar-26	Solicitation	8		1.0 Basis for Contract Award	34	Given the wide range of capabilities described in the PWS (e.g., deployment engineering, infrastructure readiness, data migration, training, and validation activities), does the Government anticipate structuring future task orders around functional capability areas or deployment phases?	24-Mar-26	No, see question 3.
218	11-Mar-26	Solicitation	6		FACTOR 3: SUPPLY CHAIN RISK	286	The evaluation criteria for the Deployment Solutions IDIQ appear to focus on the Challenge Scenario, Small Business Participation, and Supply Chain Risk factors. Can the Government confirm that past performance and corporate experience will not be evaluated at the IDIQ level?	24-Mar-26	The Government will not evaluate past performance at the IDIQ level.
219	11-Mar-26	1. Draft 52.212-1 and 52.212-2	4		4.0: Proposal Instructions	Table 2: Proposal Volumes	For Challenge Scenarios, please confirm that supporting materials, such as dashboards, can be submitted as appendices and are outside of the page limitations.	24-Mar-26	Incorrect; the use of tables, charts, graphs, diagrams, graphics and figures count as part of the page limits. See 52.212-1, Section 3.1.
220	11-Mar-26	1. Draft 52.212-1 and 52.212-2	5		Factor 1: Challenge Scenario	Lines 203 - 205	Should the Deployment Approach CDRL A003 be submitted as two distinct documents or can it be submitted as one consolidated document with clearly marked sections?	24-Mar-26	Pursuant to 52.212-1 offerors shall submit the Challenge Scenario as one consolidated document with clearly marked sections to distinguish between scenario 1a and 1b to include the sub-factors for each scenario.
221	11-Mar-26	1. Draft 52.212-1 and 52.212-2	6		Factor 2: Small Business Participation	Lines 269-277	Does the Government intend to provide a template for the small business participation attachment, or will offerors create their own file format?	24-Mar-26	See question 36.
222	11-Mar-26	1. Draft 52.212-1 and 52.212-2	6		Factor 3: Supply Chain Risk	Lines 285-289	For the Supply Chain Risk Plan, can the offerors stay general and specify process and supplement with names post-award or is it required to name exact hardware or software suppliers and component manufacturers at proposal submission time?	24-Mar-26	Offerors do not have to name exact hardware or software suppliers and component manufacturers at the time of the submission, but rather describe its processes for supply chain management as provided in the 52.212-1 and 52.212-2.
223	11-Mar-26	1. Draft 52.212-1 and 52.212-2	7	Y	Volume IV: Contract Documents	Lines 301- 306	Can the Government confirm: -All prime, subcontractor, and contingent team members should be listed in the OCI disclosure -Contractors can add members to the team post-submission for day one readiness?	24-Mar-26	223a. All prime, subcontractor, and contingent team members are not required to be listed in Attachment 16. As part of Teaming Agreements prime offerors may choose to include a similar declaration. 223b. Yes, team members may be added after contract award.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
224	11-Mar-26	Draft Exhibit A003 Deployment Approach CDRL	n/a		n/a	n/a	Does the Government intend to provide sample outlines or acceptance checklists for CDRL A003 or can the contractor use its own format, provided it covers the elements required?	24-Mar-26	Offerors are expected to use their own format within the constraints provided in 52.212-1, Section 3 Proposal Content.
225	11-Mar-26	52.212-1&-2	2		Instructions to Offerors	96	Overall Recommendation: The government should require bidders to certify that AI tools were not solely relied upon in the development of proposals. Certification must be supported by a signed attestation from contributors to ensure proposals are based on corporate experience and expertise, minimizing reliance on generative AI tools. The government asserts that AI will be used by the government to assess proposals (Line 97), but the government should establish a criteria that bidders cannot solely rely upon AI to generate proposals. This government criteria would result in improved bidder responses based on corporate experience and not solely AI research under a current "low bar" evaluation criteria. Risk: The government may receive "concept-only researched ideas" which are not based on prime bidder corporate experience.	24-Mar-26	The Government will consider the recommendations as final revisions are incorporated for the combined synopsis/solicitation.
226	11-Mar-26	52.212-1&-2	8		Basis for Contract Award: Single-Award w/ SB's	355; 367	Contract Vehicle: A Full & Open Single Award Contract structure provides the government with a single accountable prime integrator, ensuring mission continuity, streamlined governance, and clear responsibility for performance. This model also enables DHMS to drive effective small business participation through a structured subcontracting approach that delivers meaningful workshare while maintaining enterprise scale delivery assurance. By unifying delivery, and innovation under one prime, the government reduces lifecycle cost, eliminates duplication, and accelerates modernization while still benefitting from the specialized capabilities of small business partners. Risk: If DHMS does not adopt a Full & Open Single Award contract structure, the government risks diluting accountability across multiple primes, leading to fragmented delivery, inconsistent implementation standards, and slower modernization progress. This increases lifecycle cost, complicates governance, and heightens the likelihood of gaps in mission continuity—particularly during OCONUS or operationally critical deployments where unified oversight and an experienced, fully accountable integrator are essential.	24-Mar-26	The recommendation is noted. Pursuant to 52.212-2 the Government intends to make an Indefinite Delivery, Indefinite Quantity (IDIQ) multiple award contract to each and all qualifying offerors as defined in RFO 2.201 whose offer conforms to the solicitation requirements and is determined to be a responsible offeror in accordance with RFO Part 9 – Contractor Qualifications.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
227	11-Mar-26	52.212-1&-2	8		Basis for Contract Award; Evaluation Factors	363; 406	To strengthen the Government's ability to distinguish among offerors and ensure the awardee possesses the proven capability to meet the complexity and mission impact of this requirement, we recommend adding Corporate Experience as an evaluation factor, focused on the prime offerors relevant experience delivering similar scale, complexity, and scope. Including Corporate Experience as an evaluation factor would strengthen the Government's ability to assess an offeror's readiness to perform by verifying demonstrated success delivering programs of similar scale, complexity, and mission criticality. Corporate experience provides an objective indicator of an offeror's institutional maturity, proven methodologies, and capacity to manage risk across large, multi-year commercial and federal efforts—factors not fully captured through challenge scenarios alone. Incorporating this criterion enables the Government to distinguish between minimally acceptable bidders and those with a track record of sustained, high-quality delivery, thereby reducing performance risk and increasing the likelihood of consistent, mission-aligned outcomes throughout the life of the IDIQ. Risk: If DHMS does not adopt Corporate Experience as an evaluation factor, the government risks selecting an offeror whose proposal appears adequate in the challenge scenarios but lacks real world, institutional capability to deliver programs of comparable scale and mission importance. This increases the likelihood of performance shortfalls, schedule delays, and operational disruption because the evaluation would fail to differentiate between inexperienced bidders and those with a proven history of successfully executing complex, multi year federal and commercial deployments.	24-Mar-26	RFO 2.101 defines qualifying offeror, as an offeror that is determined to be a responsible source, submits a technically acceptable proposal that conforms to the requirements of the solicitation, and the contracting officer has no reason to believe would be likely to offer other than fair and reasonable pricing. Therefore, the Government has determined each evaluation factor will be evaluated as Acceptable or Unacceptable as defined in the tables provided in 52.212-2.
228	11-Mar-26	52.212-1&-2	8		Basis for Contract Award; Evaluation Factors	363; 414	To ensure offerors possess the demonstrated capability to perform the scale, complexity, and operational demands of the DHMS Deployment Solutions requirement, the Government should require evidence of prior contracts, as either a prime contractor, subcontractor, or member of a Joint Venture, that substantiate the Offeror's ability to execute enterprise wide deployments of Federal EHR and Operational Medicine solutions across geographically dispersed and operationally diverse environments. The Offeror shall provide contract or task order references relevant to the requirements described in the PWS that demonstrate experience delivering implementation, integration, configuration, modernization, and fielding of Oracle/Cerner based Federal EHR systems and operational medicine technologies in both fixed medical facilities and DIL operational environments. Each reference shall include a description of the work performed, contract number, contract value, period of performance, and customer information, along with a listing of sites supported and a summary of the specific activities performed by the Offeror. References should be supported by a SOW, PWS, or equivalent requirements document, and the Offeror shall identify, through page references, where the relevant experience is substantiated. Subcontractor experience may be provided only when supported by the subcontract's own requirements documents. Experience examples must reflect work performed by the Offeror, except in the case of a Joint Venture where the experience was performed by the proposing entity. The Offeror shall provide no more than five examples from the prime offeror that address the relevancy criteria below. Multiple related contracts within the same system may be combined as one example when supported by their associated requirements documentation and a summary narrative clearly linking the efforts. All examples must be ongoing or completed within the last five years. A single contract reference may address multiple relevancy criteria; however, relevancy criteria 1 and 2 must be addressed at least once across the set of submitted examples. Criterion 3 is considered relevant but is not required to receive a Satisfactory rating.	24-Mar-26	See question 227.

Q&A LOG
Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions
HT003826RE001
Date: 12 March 2026

Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
229	11-Mar-26	52.212-1&-2	9		Evaluation Factors	406	Implementing a phased, best value evaluation with Corporate Qualifications as the initial discriminator is a sound acquisition strategy because it ensures the Government focuses its detailed evaluation efforts on only those Offerors with a proven ability to execute the highly complex Deployment Solutions mission. By requiring Offerors to achieve a minimum rating of "Some Confidence" in Corporate Qualifications before advancing, the Government reduces the risk of receiving "concept only" proposals and increases the likelihood that those moving forward possess demonstrated success with large scale Oracle/Cerner Federal EHR deployments, multi hospital modernization efforts, and DIL operational medicine environments. This approach also improves evaluation efficiency by eliminating lower capability firms early, ensuring that technical scenario evaluations, small business assessments, and price trade offs are conducted only among Offerors with credible institutional experience. Placing Corporate Qualifications and Technical Scenario above Price—while maintaining a best value framework—enables the Government to prioritize mission assurance, operational readiness, and deployment quality over lowest cost alone. In a single award environment where performance risks cannot be distributed across multiple contractors, this weighting helps safeguard against award to a firm unable to deliver at the scale or complexity required. Finally, by clearly signaling that non Price factors are significantly more important than Price, the Government reinforces that depth of experience, technical credibility, and execution maturity are central to achieving successful enterprise wide DHMS deployments, which ultimately protects taxpayer investment and reduces lifecycle risk. As such, we recommend the following: The Government intends to make a single award. Any award will be made based on the best overall (i.e., best value) proposal that is determined to be the most beneficial to the	24-Mar-26	See question 227.
230	11-Mar-26	52.212-1&-2	9		Evaluation Factors	435	Recommend adding to scenarios' language to demonstrate prime bidder corporate experience: 1. "What are complexities in any environment that would cause mission failure?" 2. "Prime bidder must be able to support mission without failure while not requiring undo government oversight". 3. "Prime bidder must demonstrate ability to address large-scale OCONUS implementations concurrently to include mission risks and mitigation strategies". 4. "Provide demonstrated experience with this level of complexity in both the fixed facility and operational medicine environments" Risk: If DHMS does not add scenario language that explicitly probes mission failure complexities and requires bidders to demonstrate mission support without undue oversight, the government risks awarding to vendors whose concepts have not been adequately stress tested against real world failure modes. This increases the likelihood of unanticipated gaps during deployment, greater oversight burden, and elevated mission execution risk when conditions deviate from ideal plans.	24-Mar-26	See 52.212-2, Factor 1, Challenge Scenario, Sub-Factor 1 Program Management and Governance. See question 227.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
231	11-Mar-26	52.212-1&-2	9		Evaluation Factors	460	Recommend the government requires prime bidders be at least acceptable in both Scenarios 1a & 1b in order to be deemed a viable bid. Doing so will the focus the vendor pool, and realize a more manageable contract footprint for government. Risk: If DHMS does not require prime bidders to pass both Scenarios 1a and 1b, the government risks awarding to vendors who can perform only half of the mission—leaving critical gaps in either enterprise EHR deployment or operational medicine support. This increases the likelihood of uneven performance across task orders, greater government oversight burden, and reduced mission readiness in environments where both capabilities must function seamlessly together.	24-Mar-26	Pursuant to 52.212-1, Offerors shall provide a proposed Deployment Approach (A003) (Volume 1: Factor 1 – Challenge Scenario 1a) as well as a proposed Deployment Approach (A003) (Volume 1: Factor 1 – Challenge Scenario 1b). 52.212-2 provides, for purposes of Factor 1 (Challenge Scenario), an offeror will be rated Acceptable if it receives an Acceptable rating in either Challenge Scenario 1a, Challenge Scenario 1b or both. Offerors that receive an Unacceptable rating in either 1a or 1b, yet receive an Acceptable rating in either 1a or 1b will remain eligible for award.
232	11-Mar-26	52.212-1&-2	9		Evaluation Factors	413	The government should include Key Personnel as a critical component of corporate experience and prior performance. The IDIQ Program Manager, Deployment Lead, Military Clinical SME, and Technical Lead must demonstrate sufficient experience across relevant areas, including managing large-scale programs, and exposure to appropriate client communities. Key personnel should be current employees of the bidder to ensure continuity and expertise. Key Personnel should have sufficient experience and qualifications to ensure successful delivery of the program and reduce the risk of transition. Recommend qualifications: IDIQ Program Manager: -Program Manager shall serve as the primary point of contact for coordination of the Contractor with the Government Product Manager, and the COR. -Must possess 15+ years of experience in managing complex technology programs in the Military Health environment Deployment Lead: -Serves as the integration point for deployment activities and defines the deployment responsibilities and dependencies across the program and stakeholders. Develops and manages the overall deployment plans and roadmap, including timelines and resource allocations -Minimum of 10+ years of experience in deploying EHR and/or Military Health information technology solutions Military Clinical SME: -Drives clinical value by validating system's design and implementation to enhance patient care, safety, and outcomes. Analyzes clinical workflows, identifies pain points, and provides design, configuration, and standardization recommendations to streamline and optimize clinical outcomes and warfighter readiness. Proven understanding of	24-Mar-26	At the Government's discretion labor categories and/or key personnel could be included in the task order PWS. See question 53.

Q&A LOG
Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions
HT003826RE001
Date: 12 March 2026

Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
233	11-Mar-26	52.212-1&-2	8		Basis for Contract Award	356 - 387	Recommend that the Government adopt a tiered confidence rating scale—such as High Confidence, Some Confidence and No Confidence—in place of the current Acceptable/Unacceptable structure to provide a more meaningful basis for distinguishing between offerors. The complexity of the deployment requirements outlined in the solicitation warrants an evaluation approach that identifies not only whether a proposal meets minimum standards, but also the degree to which the Government can rely on the offeror's methods, maturity, and risk posture to successfully execute these scenarios. Implementing a multi tiered confidence scale would enhance the Government's ability to assess proposal quality, reduce performance risk, and promote stronger alignment between proposal evaluations and the operational demands of future task orders under the IDIQ. Risk: the government risks losing the ability to meaningfully distinguish between vendors who merely meet minimum requirements and those with mature, reliable, and lower risk approaches. This increases the likelihood of awarding to offerors who appear "acceptable" on paper but lack the proven capability, readiness, and methodological rigor needed to execute complex deployments, ultimately raising performance and mission execution risk across future task orders	24-Mar-26	See question 227.
234	11-Mar-26	52.212-1&-2	9		Evaluation Factors	413	Innovativeness: Evaluates the degree to which the proposed solution provides innovative, unique, and/or under-utilized capabilities in Government application. It is imperative the offeror clearly delineate how their proposed solution is innovative. Risk: If the government does not adopt this Innovativeness criterion, the government risks receiving solutions that are minimally compliant but lack meaningful advancement, resulting in deployments that fail to keep pace with evolving operational, clinical, and cybersecurity needs. This could limit DHMS's ability to leverage emerging technologies that improve efficiency, resilience, and long term mission performance.	24-Mar-26	Innovative will be defined in 52.212-1 in the combined synopsis/solicitation.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
235	11-Mar-26	52.212-1&-2	8		Evaluation Factors	389	We recommend a phased down select approach—beginning with Corporate Experience, followed by the technical scenario evaluations, and concluding with price—would significantly strengthen the Government's ability to identify responsible offerors capable of executing the highly complex deployment requirements defined in this solicitation. Starting with Corporate Experience ensures that only firms with demonstrated, hands on success delivering Oracle/Cerner Federal EHR deployments, large scale MHS GENESIS like implementations, and JOMIS/operational medicine capabilities in DIL and multi theater environments advance to technical evaluation, thereby reducing the burden of reviewing "concept only" proposals that cannot credibly perform. This sequencing also enables the Government to apply its resources efficiently, ensuring that detailed scenario evaluations and final pricing considerations are limited to offerors with proven institutional maturity, reduced performance risk, and a validated track record—ultimately increasing evaluation rigor, accelerating procurement timelines, and improving the likelihood of successful task order execution across the IDIQ. We recommend that the Government evaluate proposals utilizing a best value trade off evaluation of the following factors, listed in descending order of importance: Corporate Experience Technical Price Small Business Participation We recommend that the Corporate Experience and Technical Factor combined are considered significantly more important than the Price Factor. Evaluation Approach Recommendation: All proposals shall be evaluated by Government personnel, with support from non-Government advisors who will be bound by appropriate non-disclosure agreements.	24-Mar-26	See question 227.
236	11-Mar-26	52.212-1&-2	8		Evaluation Factors	389	Recommend the Government use Technical Factor ratings as part of the Evaluation Methodology that will be expressed as an adjectival assessment of Outstanding, Good, Acceptable, or Unacceptable. To receive consideration for award, a rating of no less than "Acceptable" must be achieved for the Technical Factor. This will allow the Government to focus awardees on the highest qualified bidders and ensure successful delivery on all contract requirements.	24-Mar-26	See question 227.
237	11-Mar-26	DRAFT_52.2 12-1&2_DeploymentSolutions_2026.03.04.pdf	6-7		Factor 1 – Challenge Scenario 1b; Sub Factor 2 (Deployment and Integration)	Lines 239–252 (Scenario 1b DIL description) and Lines 430–431 (Sub Factor 2.5)	For OpMed deployments in disconnected, intermittent, and low-bandwidth (DIL) environments, are there any mandatory technical standards or specifications for messaging protocols, data latency, sync windows, or store-and-forward intervals that our deployment approach must address? Or should offerors be allowed to define their own DIL synchronization patterns and performance assumptions, which can then be adjusted at the task order level?	24-Mar-26	For the purposes of 52.212-1 and 52.212-2, this information does not need to be included in the offeror's approach. The Government intends to maintain alignment with mandatory technical standards and specifications. Factor 1, Challenge Scenario 1b will be revised in the combined synopsis/solicitation.
238	11-Mar-26	DRAFT_52.2 12-1&2_DeploymentSolutions_2026.03.04.pdf	9		Factor 1 – Sub Factor 2 (Deployment and Integration)	Lines 430–433 (requirement for low /no touch remote deployment for OpMed)	For OpMed products' deployment, what level of automation is expected for the low-no-touch remote option? Does the government prefer a centrally managed, automated pipeline including remote imaging, configuration management, and over-the-air updates across Service networks, or would a model based on pre-configured 'kits' and gold images shipped forward with minimal local steps by unit personnel suffice to meet the low-/no-touch requirement? Please clarify the expected level of automation and remote control.	24-Mar-26	The Government encourages approaches that support different levels of automation. See question 156.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
239	11-Mar-26	DRAFT_52.2 12-1&2_DeploymentSolutions_2026.03.04.pdf	10		Sub-Factor 4: Training	Lines 452-459	Are there existing training curricula (A002) that must be reused, or may offerors propose new curricula aligned to current DHMS/JOMIS tools?	24-Mar-26	See question 58.
240	11-Mar-26	DRAFT_52.2 12-1&2_DeploymentSolutions_2026.03.04.pdf	10		Sub-Factor 5: User Adoption and Change Mgmt	Lines 461-465	Is the intent of the Government for the contractor to identify and implement a user sentiment or satisfaction tool(s) to measure user adoption? Or, is there an existing user sentiment or satisfaction tool(s) the Government would like the contractor to leverage for this purpose?	24-Mar-26	The Government is seeking contractors who can bring innovative and efficient methodologies for measuring user adoption. Offerors may include this in their proposal based on their assumptions.
241	11-Mar-26	PWS	6-7		Section 3.3 Hardware Delivery and Connectivity	Lines 186-201 (Hardware delivery, network integration, DIL)	To clarify, for both Federal EHR deployments at fixed-facilities (Scenario 1a) and OpMed deployments (Scenario 1b), will contractors be responsible for procuring and imaging all endpoint and infrastructure hardware such as workstations, laptops, tablets, servers, printers, medical device gateways, sensors, or will most clinical/IT hardware be provided by the government? If so, what would be the contractor's main responsibilities regarding configuration, logistics, and network integration, as specified in PWS 3.3? Additionally, please outline any differences in hardware responsibility between fixed facilities and operational/expeditionary environments.	24-Mar-26	See question 144 for the IDIQ PWS question. For the purpose of the Challenge Scenario (1a and 1b), these items will be provided and imaged by the Government. The Government is looking for an approach as to how the contractor will integrate with hardware, medical devices, and networks (see 52.212-2, Sub-factor 2, bullets 3 and 4).
242	11-Mar-26	PWS	7-8		Section 3.5.4 Training; Section 3.5.4.1 Training Program Development; Section 3.5.4.2 Training Delivery	Lines 244-294 (Training paragraphs under Section 3.5.4-3.5.4.2)	For user training and simulations applicable to both Scenario 1a and 1b, should offerors establish separate contractor-managed training environments for each task order or rely on standard training environments provided by the Government for Federal EHR and OpMed products? Furthermore, are there any specifications regarding the use of synthetic or de-identified data in these training environments beyond the already mentioned PII/PHI protections in the PWS?	24-Mar-26	See questions 70 and 142. Contractors will need to use de-identified data in training environment per the PWS Section 29.
243	11-Mar-26	PWS	10		Section 3.5.5.3: Adoption Measurement and Reinforcement	Lines 347-350	Is the intent of the Government for the contractor to identify and implement a separate tool(s) to monitor product usage and user proficiency post-cutover? Or, is there an existing monitoring tool the Government would like the contractor to leverage for this purpose?	24-Mar-26	No; specificity of tools will vary by product and task order.
244	11-Mar-26	PWS	11 & 49-51		Section 3 (Program Mgmt & Deployment); Section 33-36 (CDRLs & Deliverables)	Lines 71-377 References to CDRLs A003, A010, A011, A001, D009, D012, etc. in 3.1-3.6; Lines 1511-1648 Tables in 33-36	For the storage of multiple technical and non-technical deliverables like Deployment Approach [A003], Implementation Plan [A010], Product Configuration Data [D009], Product Validation Plan [D012], deployment artifacts (images, configurations, training materials), and other relevant CDRLs, is there a central Government 'storefront' or repository provided to publish, version-control, and retrieve these items by Government stakeholders and other contractors (e.g., sustainment teams)? If not, should offerors develop and manage their own repository/'storefront' for deployment packages and documentation? If so, what security/accreditation constraints (e.g., RMF, FedRAMP level, data residency) should be considered for that solution?	24-Mar-26	The Government will provide a central location for CDRL and non-technical deliverable submission, which will be specified in individual task orders.
245	11-Mar-26	PWS	1		1. Background	Paragraph 1	Q: Given the involvement of external federal partners and coordination through the FEHRM office, please describe whether contractor deployment efforts will require interagency coordination and data-exchange arrangements by the vendor or is this performed by the Government?	24-Mar-26	Interagency coordination for new requirements is the responsibility of the Government.
246	11-Mar-26	PWS	2		2. Purpose & Scope	Paragraph 1	Q: Could the Government clarify the term "on-demand deployment"? What triggers a deployment task order and how much lead time or notice will the contractor receive to initiate a new deployment under the IDIQ? Understanding the process and expected mobilization speed will help us design a responsive staffing and deployment approach.	24-Mar-26	Task order requirements may be grouped by product, region, or other logical manner which supports end-to-end deployments. See question 3.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
247	11-Mar-26	PWS	3		3. Desired Outcomes/Tasks/Objectives	Paragraph 1	Q: What objective criteria and measurable thresholds will the Government use to determine that a deployed solution is "fully functional and adopted" for final acceptance (e.g., user proficiency/usage targets, successful completion of required data exchanges, and post-go-live performance levels)? We recommend the Government provide current adoption metrics and end-user satisfaction survey results to establish a baseline for post-activation measurement?	24-Mar-26	Current adoption metrics and end-user satisfaction survey results (if any) will be provided by task order.
248	11-Mar-26	PWS	4		3.1 Program Management	Bullet 6 (Financial and Contract Reporting)	Comment: The PWS references a Monthly Progress Report "(D00)" under Financial and Contract Reporting, which appears to be a typo (likely intended as D006, matching Section 33.5). We recommend the Government confirm the correct CDRL number for the Monthly Progress Report to avoid confusion in deliverables tracking. (Q: Assuming it is D006, will a specific template or format for this report be provided?)	24-Mar-26	This will be corrected in the combined synopsis and solicitation. The Monthly Progress Report is D006; a template will be not provided.
249	11-Mar-26	PWS	5		3.2.1 Initiation and Planning	Bullet 3 (Implementation Plan & IMS – A010/A011)	Q: Are there specific tools or formats required for the Integrated Master Schedule (CDRL A011) and linked Implementation Plan (A010)? For instance, must the IMS be submitted in Microsoft Project format, and should it be resource-loaded or integrated with a Government master schedule? Also, will the Government expect the contractor to follow DCMA 14-point schedule assessment or similar quality metrics (as mentioned later in Section 33)? Knowing these details will ensure our scheduling approach meets all Government standards.	24-Mar-26	CDRL A011 specifies the Integrated Master Schedule should be submitted in Microsoft Project, Excel, and PDF. The CDRL will be provided with the combined synopsis/solicitation. The contract should propose an approach that is best based on the task order.
250	11-Mar-26	PWS	5		3.2.2 Configuration, Validation, and Implementation	Bullet 1 (Data Collection – D009)	Q: For Product Configuration Data (D009) collection, will the Government provide standardized data collection templates and guidance (e.g., site survey questionnaires)?	24-Mar-26	Whenever available yes, but templates may need to be generated or adapted to sites based on operational need and/or product.
251	11-Mar-26	PWS	5		3.2.2 Configuration, Validation, and Implementation	Bullet 2 (Product(s) Configuration)	Q: Please clarify if deployment contractor's implementation activities include unit and integration testing?	24-Mar-26	Unit and integration testing is not included; however, the contractor shall perform product validation as indicated in PWS Section 3.4.2.
252	11-Mar-26	PWS	5		3.2.3 Stabilization and Transition	Bullet 1 (Post-Deployment Stabilization Support)	Q: What is the typical duration of the post-deployment stabilization/support period as defined in task orders, and during that period what level and type of user support is required (e.g., 24/7 on-site "at-the-elbow" support versus extended-hours and/or remote helpdesk), including any specific activation requirements or expectations for providing at-the-elbow support in austere or otherwise constrained operational environments?	24-Mar-26	This time period will vary per site given world events and operational needs. See question 3.
253	11-Mar-26	PWS	6		3.3 Hardware Delivery and Connectivity	Paragraph 1	Q: Does the Government have an estimate of the hardware scope the contractor must provide and integrate? For instance, will the contractor be responsible for delivering end-user devices (workstations, handhelds), networking equipment, and servers for each site, or are some of these Government-furnished? Any information on expected quantities or types of hardware per deployment (even rough order of magnitude) would help in planning logistics and ensuring compliance (e.g., using only DISA-approved devices as required by Section 16.4.9).	24-Mar-26	See question 101, 144, and 206.
254	11-Mar-26	PWS	7		3.5.3 Consideration of Global User Community	Paragraph 1	Q: Will user training and support need to be delivered in languages other than English for any global users or international partners? If multinational or non-English-speaking personnel will use the system, should we plan for translation of training materials and multilingual support staff to ensure consistent understanding worldwide? Clarifying any language or cultural adaptation requirements in advance will improve our global support strategy.	24-Mar-26	Translation of training materials and multilingual support staff are not anticipated at this time. Specificity such as this may vary by product and task order.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
255	11-Mar-26	PWS	8		3.5.4.1 Training Program Development	Bullet 1 (Training & orientation plan)	Q: Are there any existing training needs assessments or user competency profiles that the Government can share for the EHR system? For example, does DHA have defined user roles and required competencies for MHS GENESIS or JOMIS products that our training plan should cover? Access to such information (or prior training curricula used) would enable us to build on proven content and ensure we address all necessary user skills.	24-Mar-26	Yes, some of these training assessments and user competency profiles exist and will be made available at the task order level.
256	11-Mar-26	PWS	8		3.5.4.1 Training Program Development	Bullet 5 (Dedicated training environment)	Q: Will the Government provide a dedicated training environment that mirrors the production EHR (e.g., a sandbox MHS GENESIS instance) or is the deployment solutions support contractor expected to provision, secure, and maintain the training environment?	24-Mar-26	See question 142.
257	11-Mar-26	PWS	8		3.5.4.2 Training Delivery	Bullet 1 (Qualified instructors & scenarios)	Q: Recommend the government provide criteria for "qualified instructors," including any required certifications or qualifications (e.g., EHR software vendor certification, clinical background for clinical workflow instruction, prior experience with military health systems, or formal training credentials), so offerors can ensure all proposed training instructors meet Government-mandated requirements?	24-Mar-26	Qualified instructors should be determined by the vendor based on the requirements specified in the task order PWS.
258	11-Mar-26	PWS	9-10		3.5.5.2 Communication and End-User Engagement	Bullet 3	Q: What is overall end-user turnover rate per year? Are there certain times of the year where we can expect higher rates of turnover? hirings/departures?	24-Mar-26	Due to the diverse types of deployments anticipated under this MAC, this question cannot be answered at this time.
259	11-Mar-26	PWS	10		3.5.5.3 Adoption Measurement and Reinforcement	Bullet 3 (User satisfaction surveys & AARs)	Q: Does the government have a platform for user satisfaction surveys and after-action reviews (for example, DHA's Enterprise Feedback system), or will we propose our own tools and methods for gathering this feedback?	24-Mar-26	Specificity such as this may vary by product and task order; however, recommendations for tools and methods are encouraged.
260	11-Mar-26	PWS	20		16.5 Risk Management Framework (RMF) for DoW IT	Paragraph 1-2	Q: For systems deployed under this contract (e.g., local infrastructure or configurations), is the contractor responsible for achieving and maintaining RMF accreditations (Authority to Operate) for each enclave or site, or will we be operating under an existing ATO? If new RMF packages are needed per site or system, that process (categorization, control implementation, security assessments, POA&Ms) can be time-consuming. Understanding how RMF will be applied (centralized vs. per-site) and who the Authorizing Official will be (DHA or individual base commanders) will help us allocate the right level of cybersecurity support and schedule the RMF activities appropriately in each deployment timeline.	24-Mar-26	See question 86.
261	11-Mar-26	PWS	5; 6; 11		3.2.2 Configuration, Validation, and Implementation; 3.4 Product Connectivity and Interface Validation; 3.4.1 Medical Device Connectivity and Validation; 3.4.2	158; 202; 205; 210; 376	The PWS references product validation, interface validation, and device connectivity testing. Can the Government clarify whether independent validation and testing services may be performed by specialized subcontractors or independent support contractors?	24-Mar-26	Yes, based on the contractor's business decisions, these services may be subcontracted. Based on industry feedback, the Government is revising PWS Section 3.
262	11-Mar-26	PWS	3		3.1 Program Management	80, 83	For mission-critical healthcare systems, independent verification and validation is often performed by organizations separate from the primary deployment integrator. Does the Government anticipate task orders that include independent testing and validation roles?	24-Mar-26	No; See question 261.
263	11-Mar-26	PWS	5		3.2.2 Configuration, Validation, and Implementation	157-171	Will deployment events include independent verification of device connectivity, interface performance, and clinical workflow validation prior to go-live?	24-Mar-26	Specificity such as this may vary by product and task order. Based on industry feedback, the Government is revising PWS Section 3.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
264	11-Mar-26	PWS	6		3.4.1 Medical Device Connectivity and Validation	207	The PWS includes validation of medical device integration and clinical workflow support. Can the Government clarify whether device certification and connectivity validation activities will be performed during deployment events or through separate validation activities?	24-Mar-26	IAW PWS Section 3.4.1, this is part of deployment. The Government expects offerors to propose their best method to minimize interruptions in clinical care. Based on industry feedback, the Government is revising PWS Section 3.
265	11-Mar-26	PWS	7; 9		3.5.4 Training; 3.5.5.2 Communication and End-User Engagement	249; 238	The PWS references training and user adoption activities. Will the Government include mechanisms for assessing user readiness or workflow adoption prior to deployment go-live events?	24-Mar-26	The Government expects offerors to include approaches for assessing user readiness and workflow adoption. See CDRL A003.
266	11-Mar-26	Solicitation	8		1.0 Basis for Contract Award	34	Given the wide range of capabilities required for DHMS deployments, including infrastructure readiness, device integration, testing, and user adoption activities, does the Government anticipate issuing task orders aligned to specialized capability areas to support best of breed expertise?	24-Mar-26	See question 53.
267	11-Mar-26	Solicitation	3		3.1 Program Management	85, 104	Given the mission-critical nature of DHMS deployments and the complexity of coordinating clinical workflows, infrastructure readiness, device integration, data migration, and user adoption across multiple deployment sites, does the Government anticipate structuring future task orders to allow for independent verification and validation (IV&V), data quality assurance, and user readiness validation activities that are organizationally independent from the primary deployment integrator?	24-Mar-26	See questions 261 and 262.
268	11-Mar-26	PWS	8		3.5.4.1 Training Program Development	Paragraph 5,6	Does the contractor need to replicate all production system configurations within the training environment, or will specific workflows and configurations be prioritized?	24-Mar-26	See question 142.
269	11-Mar-26	PWS	8		3.5.4.2 Training Delivery	Paragraph 2,3	Please clarify which tools are Government-provided or if bidders must develop proprietary tools for role-based simulations and "day-in-the-life" scenarios?	24-Mar-26	Specificity such as this may vary by product and task order.
270	11-Mar-26	PWS	8		3.5.4.2 Training Delivery	Paragraph 4	Are there specific proficiency metrics or standards (e.g., passing rates on assessments, competency benchmarks) that users must meet, or should the contractor develop these metrics as part of their training program?	24-Mar-26	See question 247.
271	11-Mar-26	PWS	9		3.5.5.1 Change Management and Leadership Engagement	Paragraph 1	How does the Government define "proven industry best practices and models" for change management? Is there an expectation for contractors to cite specific frameworks (e.g., Prosci, ADKAR)?	24-Mar-26	The offeror's Deployment Approach (A003) should detail the contractor's own corporate methodologies, processes, best practices, and tools for executing the full range of services described in the PWS.
272	11-Mar-26	PWS	9		3.5.5.1 Change Management and Leadership Engagement	Paragraph 2	For readiness surveys, is there a required format or timeline for deployment, and are scored results shared back with the Government for review?	24-Mar-26	There is no required format; timeline and results may vary by product and task order.
273	11-Mar-26	PWS	9		3.5.5.1 Change Management and Leadership Engagement	Paragraph 3	For equipping staff and clinical champions, can you clarify the Government's role in identifying these stakeholders? Is the contractor expected to develop criteria independently?	24-Mar-26	The Government expects contractors to provide a recommendation for the criteria needed to serve as a champion for a specific product. The Government will identify champions as applicable. Based on industry feedback, the Government is revising PWS Section 3.
274	11-Mar-26	PWS	10		3.6 Data Management and Migration	Paragraph 1	Please confirm whether data migration involves all legacy systems or only a subset specified per Task Order? Are there any systems excluded from this migration effort?	24-Mar-26	Specificity such as this may vary by product and task order.
275	11-Mar-26	PWS	10		3.6.1 Data Migration Execution	Paragraph 2	For the "Data Seeding" activities in field units, are there any data refresh frequency requirements?	24-Mar-26	Specificity such as this will vary by task order.
276	11-Mar-26	PWS	11		5.1 Transition-in Period	Paragraph 1	What metrics or benchmarks will the Government use to evaluate the Transition-In performance and completion of contractor onboarding activities?	24-Mar-26	Please refer to CDRL A004, Transition-In Plan which will be provided as part of the combined synopsis/solicitation.

Q&A LOG Program Executive Office (PEO) Defense Healthcare Management Systems (DHMS) Deployment Solutions HT003826RE001 Date: 12 March 2026									
Q#	DATE RECEIVED	Reference	Page#	OCI	Section Name	Paragraph/Line #	PROSPECTIVE VENDOR'S QUESTION	DATE OF REPLY	GOVERNMENT'S RESPONSE
277	11-Mar-26	Solicitation		Y			If a vendor is selected for this IDIQ, does that preclude that vendor from submitting a proposal and holding a future MHS GENESIS contract related to technical integration, human centered design or product management (as referenced in the HCDS Contract Strategy briefing posted to SAM on December 22, 2025)?	24-Mar-26	See question 47.
278	11-Mar-26	Solicitation					Can the Government please clarify if the intended acquisition strategy is to release six (6) separate procurements to support the MHS GENESIS program--technical integration, human centered design, product management, end user services, help desk and deployment? If so, can the Government outline the expected timeline for the release of those procurement opportunities?	24-Mar-26	The Government will provide updates via SAM.gov regarding other procurement opportunities.
279	11-Mar-26	Solicitation					Does the Government intend to issue a separate solicitation for Human Centered Design services or does the Government believe that scope is now included as part of this Deployment Solutions IDIQ?	24-Mar-26	Human Centered Design is not within the scope of the IDIQ PWS.
280	11-Mar-26	52.212-1&-2	6		Factor 2. Small Business Participation	Line 259 - 266	On page 6, line 266, in the Section "Factor 2: Small Business Participation", would the Government consider adjusting the category "vi. Woman Owned Small Business" to include other Minority Owned Businesses? So that category would be "vi. Women-Owned Small Business/Minority-Owned Small Business?"	24-Mar-26	See question 36.
281	11-Mar-26	52.212-1&-2	6	Y	Factor 2. Small Business Participation	Line 269	Is it acceptable to the Government for a small business to participate on multiple vendor teams pursuing the Deployment Solutions RFP in support of Factor 2: Small Business Participation?	24-Mar-26	Yes, subcontractors may participate on multiple teams as long as it does not create an OCI. See question 36.
282	11-Mar-26	52.212-1&-2	9		2.0 Evaluation Factors	Factor 1: Challenge Scenario	Given the complexity of the DHA environment and the scale of deployment solutions, we recommend that the Government consider including past performance as an evaluation factor to select qualified vendors that can both write a compelling solution in the Challenge Scenario and demonstrate proven success in delivering the work outlined in the PWS.	24-Mar-26	The Government does not intend to evaluate past performance at the IDIQ level. See question 132.
283	9-Mar-26	PWS					Our team is reviewing the requirements, specifically the technical challenges of data exchange in DIL (austere) environments and C2 Situational Awareness . Given our experience in these areas, we would appreciate a brief meeting or technical exchange with the program office to ensure our proposed approach aligns with your vision for the OpMed CDP and Medical Hub.	24-Mar-26	Responsibilities for the data exchange are executed under a different contract. For the purpose of Factor 1 Challenge Scenario, offerors should consider the necessary steps to verify receipt of data. Since this is a FAR based acquisition, one-on-one meetings, or one-on-one technical exchange, with potential contractors is not appropriate.
