

The Department of the Interior, United States Geological Survey, Land Satellite Data System (LSDS) Mission Operations Project (LMOP) has a requirement to purchase annual on-site maintenance and on-call phone and email support for the Landsat Ground Stations (LGS) 10-meter L3-Datron antenna. The USGS is aware of no other source that can provide 10-meter L3-Datron antenna maintenance. Therefore, the USGS intends to make an award to Fisica Applied Technologies Inc. unless the USGS is contacted by any vendor who believes they can provide a product that can meet the needs of this requirement. Vendors are invited to contact the Contracting Officer, Brian Baker via email at brian_baker@ios.doi.gov no later than 1:00 PM EST, Tuesday, March 31, 2026, with an affirmative answer.

The U.S. Geological Survey (USGS) considers employee signatures to be Personal Protected Information, and therefore all employee signatures have been redacted. By posting this document, the Contracting Officer attests all appropriate signatures have been obtained.

JUSTIFICATION FOR OTHER THAN FULL AND OPEN COMPETITION (FAR 13.1)

The following information is provided to demonstrate the proposed contractor's unique qualifications:

1. The Land Satellite Data System (LSDS) Mission Operations Project (LMOP) utilizes the 10-meter antenna to receive Landsat 8 & Landsat 9 satellite contacts. The maintenance services include scheduled preventative maintenance, troubleshooting, repairs, and technical support to ensure uninterrupted antenna operations.
2. Due to being the original 10-meter antenna manufacturer, Fisica Applied Technologies Inc. possess unique technical knowledge, proprietary design details, and specialized equipment required for maintaining this asset. No other vendor has equivalent expertise or access to OEM resources, making Fisica Applied Technologies Inc. the only source reasonably available to perform this maintenance.
3. The USGS will continue to review opportunities to increase competition by monitoring industry capabilities and engaging with potential vendors through market research.
