
DRAFT AOI-2026-003_WICS II

AOI Title: Wing Information and Communications Support (WICS II)

Set-Aside: Total 8(a) Small Business – 100%

Close Date: TBD

Evaluation of White Papers: TBD

AOI CO: TBD

This AOI aligns with the consolidation effort, under the CNECTS initiative, that aims to break down operational silos, drive significant efficiencies, and establish a proactive, resilient, and secure digital foundation. We are seeking partners who can move beyond legacy management paradigms and introduce modern, data-driven, and automated approaches to IT service delivery, engineering, and mission support:

Background

The support for critical space operations and MILSATCOM systems is siloed from the base's foundational IT infrastructure. This creates a seam in cybersecurity monitoring, limits enterprise-wide situational awareness, and results in redundant support structures for network management and logistics.

Technical Focus Areas (TFAs)

Offerors must propose solutions aligned with each of the TFAs. All submissions should emphasize the technical aspects of their approach, with deliverables expected to provide production-ready systems, but may include prototypes, models, and/or experimental frameworks.

TFA 1: Integrated Mission Operations Center (MOC):

Desired Capabilities:

- Design and operate a consolidated MOC that unifies the monitoring and management of GBS, MILSATCOM, and base-level network services. This center should leverage shared tools and personnel to provide a holistic view of the entire communications enterprise.

TFA 2: Condition-Based and Predictive Maintenance:

Desired Capabilities:

- Implement a sensor and data analytics solution to monitor the health of MILSATCOM terminals and ground support equipment. Use this data to shift from a scheduled maintenance posture to a predictive model that addresses issues before they impact the mission.

TFA 3: Digital Supply Chain and Logistics:

Desired Capabilities:

- Propose a digital logistics platform that automates asset management, parts ordering, and supply chain visibility for all four contract areas, ensuring resources are shared efficiently across the enterprise.
-

Performance & Integration Considerations

Solutions must demonstrate a superior and innovative approach to enterprise IT management beyond standard industry practices. All TFAs are mission-critical focused; the Government seeks to assess feasibility, validate technical approaches, and inform transition paths for future IT capabilities.

Security Requirements

Phase I submissions shall be Unclassified. Subsequent phases may require submission and/or performance at higher classification levels, as specified in the AOI and any draft or final DD Form 254.

Submission Instructions & Evaluation

Per Attachments 1–2 (submission) and Attachment 6 (evaluation).

Funding Statement

The Government may fund all, some, or none of the proposed solutions, in whole or in part, subject to availability of funds.
