Arlington, VA 22204-1373

I. OVERVIEW

a. Program/Equipment Name		b. Amount <i>(Total price/cost to include options.)</i>		
Huntron Access DH2 Prober		[REDACTED]		
c. Authority				
10 USC 3204(a)(1) or 41 USC 3304(a)(1) as implemented in FAR 6.302-1 Only one responsible source and no other supplies or services will satisfy agency requirements.				
d. Technical Representative				
Name	Title	Email	Phone	Date
[REDACTED]	127th Wing AFREP Manager	[REDACTED]	[REDACTED]	
e. Contracting Officer				
Name	Title	Email	Phone	Date
Tami McKenney	Contracting Officer	tami.mckenney.1@us.af.mil	586-239-5989	
☐ Requirements Representative <i>(If different from Technical Representative.)</i>				
☒ Prepared by <i>(If different from Contracting Officer.)</i>				
Name	Title	Email	Phone	Date
Austin Parks	Contract Specialist	austin.parks.8@us.af.mil	586-239-5235	

II. REVIEWS

I have reviewed this justification and find it adequate to support other than full and open competition.

- ☐ Program Manager *(If applicable.)*
- ☐ Program Executive Officer *(When item is Program Executive Officer managed.)*

1a. CONTRACTING ACTIVITY

W50S85

b. Requiring Activity

127th Maintenance Group MXS/MXMVT

c. POC

2a. NATURE OF ACTION

Sole-Source

b. Contract Action

c. Contract Type

d. Fund Type

O&M, Air

3a. ESTIMATED TOTAL PRICE OF REQUEST (including options, if any)

b. If Applicable, Estimated Price of Supplies/Services

4a. Name of Requirement

Huntron Access DH2 Prober

b. Description of Requirement

The Huntron Access DH2 is a robotic "flying probe" system designed for automated testing and diagnostics of printed circuit boards and electronic assemblies. This equipment is essential for the Air Force Repair Enhancement Program (AFREP) mission, which involves component-level troubleshooting and repair of mission-critical assets. The probing station allows trained technicians to quickly and reliably diagnose failures on complex Circuit Card Assemblies (CCAs), enabling local repair, saving procurement and depot-level repair costs, and improving mission readiness.

c. Demonstrate, in Detail, Why This Specific Item or Service, is the Only One That Meets Your Requirements

The government's minimum requirements can only be met by the Huntron Access DH2 for the following reasons pertaining to standardization, interoperability, and the avoidance of substantial duplication of costs that would not be recovered through competition:

Incompatibility with Existing, Government-Owned Test Program Sets (TPS): The requiring activity currently possesses a substantial library of government-funded and validated Test Program Sets developed specifically for the Huntron hardware and software architecture. These TPS "files" are the core of the diagnostic and repair capability for numerous mission-essential CCAs. A competing manufacturer's probing station would be incompatible with this entire library. The acquisition of any other system would render this significant government investment obsolete and require an expensive and extensive effort to recreate, validate, and certify new TPS for every CCA currently supported. This would result in unacceptable delays and substantial, unrecoverable costs.

Standardization with Existing Mission-Critical Infrastructure: The AFREP and other military repair depots have been standardized on Huntron test equipment since 1986. The tools, repair procedures, and—most importantly—the governing Technical Orders (TOs) for CCA repair are predicated on the use of Huntron systems. Procuring a different system would introduce a non-standard piece of equipment, creating logistical and training burdens and potentially conflicting with the mandated repair procedures within the technical data.

Specialized and Non-Transferable Technician Training: Most AFREP technicians have undergone extensive, specialized training on the operation and programming of Huntron equipment, including the "Huntron User Development course." The skillset required to operate this system is not directly transferable to competing systems. Huntron offers this training when purchasing this equipment at the contractors expense. Acquiring another manufacturer's prober would necessitate a complete retraining of all personnel, incurring significant costs and a loss of operational readiness while technicians are brought up to speed on a new, non-standard system.

In summary, only the Huntron Access DH2 can integrate with the government's existing investment in test programs, technical procedures, and personnel expertise without causing mission disruption and incurring substantial duplicative costs.

5a. HAS THIS BEEN PREVIOUSLY PROCURED?

☐ Yes, details are below. ☒ No.

6a. AUTHORITY CITED

10 USC 2304(a)(1) or 41 USC 3304(a)(1) as implemented in FAR 6.302-1 Only one responsible source and no other supplies or services will satisfy agency requirements.

b. Reason for Authority Cited

Only the Huntron Access DH2 can integrate with the government's existing investment in test programs, technical procedures, and personnel expertise without causing mission disruption and incurring substantial duplicative costs.

7. POSTING REQUIREMENTS

Include justification with solicitation (FAR 6.302-1(c)(1)(ii)(C)), the justification shall be posted with the solicitation (see 5.102(a)(6)).

8. CONTRACTING REQUIREMENTS

a. Efforts to Obtain Competition ⓘ

Market research was conducted to identify other manufacturers of robotic probing stations. While other manufacturers exist (e.g., Keysight, Teradyne, SPEA), none can meet the government's minimum requirement for compatibility with the existing, validated library of Huntron-specific Test Program Sets. Therefore, soliciting offers from these sources would be of no value to the government, as they are incapable of meeting the essential requirement for interoperability. A search was conducted to find potential suppliers through various Internet searches and results were limited to the manufacturer and 2 distributors which were tied together TestEquity and TE Equipment. Both of the entities were large businesses under the selected NAICS 334515. Additionally, an GSA schedule was found to with the parent company TestEquity that distributed the equipment through this MAS, however this schedule has expired.

b. Actions to Increase Competition ⓘ

None

c. Market Research ⓘ

Market research was conducted to identify other manufacturers of robotic probing stations. While other manufacturers exist (e.g., Keysight, Teradyne, SPEA), none can meet the government's minimum requirement for compatibility with the existing, validated library of Huntron-specific Test Program Sets. Therefore, soliciting offers from these sources would be of no value to the government, as they are incapable of meeting the essential requirement for interoperability.

The SBA small business search revealed 485 companies in the NAICS 334515, 19 of which specialize in probe testing equipment. In the applicable 19 is Huntron the manufacturer of the requested item. Both Unicorn/FPI and AbilityOne did not reveal this product.

A basic search was conducted to find potential suppliers through various Internet searches and results were limited to the manufacturer and 2 distributors which were tied together TestEquity and TE Equipment. Both of the entities were large businesses under the selected NAICS 334515. Additionally, an GSA schedule was found to with the parent company TestEquity that distributed the equipment through this MAS, however this schedule has expired. Due to the expiration FAR Part 8 is not applicable. The acquisition is under the SAT therefore, is to set-aside for Small Business.

d. Interested Sources ⓘ

Huntron

e. Other Facts ⓘ

The mission of the AFREP is to create cost-avoidance for the Air Force. The cost to re-develop, test, and validate the entire TPS library would far exceed the cost of this acquisition and would defeat the cost-saving purpose of the program. Limited distribution of the particular equipment solidifies that this acquisition is best-suited for a sole source requirement.

9. REQUIRING ACTIVITY CERTIFICATION

Technical and Requirements

I certify that the supporting data under my cognizance, which are included in the justification, are accurate and complete to the best of my knowledge and belief.
