

DEPARTMENT OF THE AIR FORCE
OKLAHOMA CITY AIR LOGISTICS COMPLEX
(AFMC) TINKER AIR FORCE BASE OKLAHOMA

March 3, 2026

TO: AFSC/PZIM

FROM: OC-ALC/OBCA for 76 OB

SUBJECT: Sole Source Justification for Serv O26-060 AS9100/9110 Certification

1. The OC-ALC/QA (Quality Assurance) Complex requests a three (3) year contract for ISO 9001:2015 AS9100D:2016 initial certification and AS9110C:2016 recertification.
2. Performance Review Institute (PRI) is the preferred vendor in support of this service request. The impact of selecting a different vendor is listed below:

o [REDACTED] of bringing in a new contractor to do just the AS9100 audit (learning curve, extra cost, extra time, etc)

Engaging a new contractor introduces unacceptable risks to cost, efficiency, and [REDACTED]. [REDACTED] is to the existing AS9110C certification, following a clear chain [REDACTED]. A new auditor would be unfamiliar with the OC-ALC's quality system, which has been successfully audited by PRI since 4 April 2019. The new contractor would have to learn OC-ALC established processes at the Complex's expense, leading to a less efficient audit. Lacking established trust, a new auditor is more likely to misinterpret a minor nonconformance during the initial AS9100D audit as a [REDACTED] placing the entire shared Quality Management System under scrutiny. Such a finding would create a direct and immediate [REDACTED] to the existing, [REDACTED] AS9110C certification. The loss of the AS9110C certification would place the OC-ALC in violation of its contractual agreements with key partners, including Pratt & Whitney, Boeing, Lockheed Martin, and Raytheon Technologies. This contractual [REDACTED] would disqualify the OC-ALC from associated Maintenance, Repair and Overhaul (MRO) [REDACTED] making the retention of the AS9110C certification a strategic imperative for [REDACTED] and financial stability.

The OC-ALC/QAX can quantify the significant "learning curve" costs associated with educating a new contractor, which diverts their own subject matter experts from primary mission duties. The current provider (PRI) possesses deep institutional knowledge of the OC-ALC quality system's history and evolution, an invaluable asset that prevents the inefficient reauditing of established processes. Citing the precedent of [REDACTED] which lost workload after allowing its certification to lapse, demonstrates this is not a hypothetical [REDACTED] but a documented consequence. Ultimately, the savings are operational as well as financial, as a single annual audit minimizes [REDACTED] and ensures a consistent interpretation of standards that a new vendor simply cannot provide.

o Possible [REDACTED] to relationships with contractors like Pratt & Whitney.

Again, hiring a new contractor for AS9100D initial certification poses a [REDACTED] to OC-ALC established partnerships under AS9110C certification. An auditor unfamiliar with OC-ALC processes is more likely to misinterpret a minor as a major nonconformity, which would directly threaten the Complex's existing AS9110C certification. Since AS9110C certification is an existing OC-ALC contractual requirement for partners like Pratt & Whitney, its loss would constitute a [REDACTED] of contract. This could [REDACTED] business relationships and jeopardize [REDACTED]. The experience at [REDACTED] serves as a stark reminder of the stakes involved. When [REDACTED] lost their AS9110C certification, they consequently lost [REDACTED] that was contractually dependent upon that certification. This exact scenario is unacceptable for the OC-ALC, as the Complex's operations and partnership agreements are directly tied to maintaining AS9110C certification, making its retention a strategic imperative, especially for new workload.

o Time and funding savings achieved by going Sole Source to PRI.

The OC-ALC has successfully utilized a sole-source contract with the same provider (PRI) since 4 April 2019, renewing it every three years without any issues. This long-standing approach provides significant advantages by consolidating what would be two separate audits into a single, annual event. This streamlined process results in a 50% savings in both time and funding and is considerably less [REDACTED] to production operations. This approach directly embodies the principles of continual process improvement and cost savings that are foundational to ISO9001, AS9100D and AS9110C and the 'Art of the Possible' initiative. To force a redundant system with two separate contractors would be a clear regression, not a process improvement. Furthermore, utilizing a single registrar (PRI) has been the OC-ALC standard for the last seven years (2019), proven practice since the transition of OC-ALC AS9110C certification 15 years ago (2010) and mirrors the efficient audit models used at both Robins and Hill AFB.

o Any other information that will reinforce the justification for sole source.

With only five internal OC-ALC/QAX AS9100D-AS9110C auditors to sustain AS9110C certification and implementation of AS9100D certification while supporting an organization of 10,000 employees across [REDACTED] buildings, resources are already stretched [REDACTED]. Having to manage two separate, full-scale audits (AS9100D and AS9110C) instead of one integrated process would fundamentally shift the OC-ALC/QAX's posture from proactive quality management to a purely reactive one. The team simply lacks the personnel to effectively manage two distinct audit cycles, each with its own set of preparations and follow-up requirements throughout the year. Furthermore, introducing a new contractor would mean adapting to different, non-standardized expectations, creating [REDACTED] and inefficiency that the current streamlined process avoids. Retaining PRI as a sole-source provider (contractor) is not a matter of preference, but of [REDACTED]. Their unique and deeply-rooted institutional knowledge of OC-ALC's QMS, combined with the established efficiencies of the Complex's integrated audit process, provides a level of risk mitigation and cost-effectiveness that cannot be replicated by any new contractor without introducing [REDACTED] cost, and [REDACTED]. The continuity provided by PRI is a [REDACTED] of the OC-ALC's proactive quality management posture.

3. Due to the criteria listed above, the proposed vendor is the only vendor that can satisfy the Government's requirements.

Performance Review Institute, Inc.

Address: [REDACTED] Warrendale, PA [REDACTED]

Contact: [REDACTED]

Cage Code: 1N0B4

Type of Business: Large Business

4. Market research was performed reviewing System for Award Management (SAM) databases using North American Industry Classification System (NAICS) Code (541380) looking for companies that could provide a new ISO 9001:2016 AS9100 Certification under Federal Supply Code (FSC H999).

Request for Quote (RFQ) – 1790877 posted on General Services Administration (GSA) to 2,917 contractors, resulting in twenty-six (26) responses with no ROMs or Capability statements provided.

Previous recertifications were conducted under FA8132-21-P-0019 & FA8132-24-P-0023 for the AS9110 Certifications for over three years and awarded as sole source to Performance Review Institute, Inc. In review there is one (1) source that can provide this service for this acquisition.

5. The Government will continue to monitor the market and conduct market research surveys to determine potential future sources to try and avoid future single source acquisitions.
6. I have determined, in accordance with FAR 12.102(a), that the circumstances of this contract action deem only a single source is reasonably available.
