

c-sUAS Sunshade System

Shaw AFB, SC

Minimum Requirements

Shaw AFB is seeking a contractor to supply and install a double-layered netting system that shall enclose a single sunshade for aircraft at Shaw AFB, SC. The primary purpose of this system is to prevent intrusions by small Unmanned Aircraft System (sUAS).

No component of the proposed system shall be drilled into the pavement. The system shall be attached to the existing columns and horizontal spans of the sunshade structure. The netting for each bay shall be movable by a single, manual operator. Contractor has the option to decide if the netting for each bay shall slide open to one side like a shower curtain or part in the middle like a theater stage curtain. However, when in the open position, the netting system shall store neatly within a 1-foot clearance of the parking bay columns. The system shall be capable of being secured in both the open and closed positions. The system shall allow entry/exit of an individual aircraft while the netting for the remaining parking spaces stay securely closed. Netting material shall be UV-resistant, moisture-resistant, and fire-retardant, and it shall have a minimum expected lifespan of 5 years. Netting material shall be at least #36-gauge thickness. The netting system shall not significantly deform when subjected to wind gusts exceeding 110 miles per hour. Any gaps or openings in the barrier/netting system shall not be larger than 9 inches square. The sunshade covers individual parking bays. Approximate dimensions of each parking bay opening are listed below.

Approximate Dimensions

Parking bay **approximate** dimensions are:

- Width of each entry/exit bay opening: **65'**
- Clearance height of each entry/exit bay opening: **25'**
- Bay depth: **60'**
