

Statement of Need

1. Introduction

The Office of Protective Services (SIP) has a need for the procurement of Police Duty Footwear.

2. Background

NGA's uniformed police officers perform duties in a dynamic environment, operating both within climate-controlled indoor facilities and in variable outdoor conditions. The nature of their mission demands footwear that provides exceptional durability, comfort, and safety across a wide range of scenarios, from routine patrols to critical incidents. The acquisition of this critical equipment ensures all officers are properly outfitted to perform their duties effectively and safely.

3. Salient Characteristics

The required police duty boots must meet the following minimum specifications:

- Officer footwear should be for both male and female officers.
- The boots shall be black in color.
- Women's footwear shall range in size from 4-11.
- Men's footwear shall range in size from 6-15.
- Traction and Stability:
 - Must feature an aggressive, slip-resistant rubber outsole.
 - Outsole must provide secure traction on varied surfaces, including wet pavement, linoleum, and uneven terrain.
- Comfort and Fatigue Reduction:
 - Must be equipped with a high-performance midsole (e.g., EVA or equivalent) for superior shock absorption.
 - Must include a cushioned, multi-density, or memory foam insole to reduce foot fatigue during extended periods of standing, walking, or running.
- Durability and Protection:
 - Constructed from durable materials such as full-grain leather, suede, ballistic nylon, or Cordura fabric to resist abrasion and extend service life.
 - May include a composite safety toe for impact and compression protection without the weight of a traditional steel toe.

- **Breathability and Moisture Management:**
 - Must feature an anti-microbial, moisture-wicking liner to keep feet dry and mitigate odor.
 - Upper materials should allow for adequate air circulation to enhance comfort in warm environments.
- **Supportive Design:**
 - Available in high-shaft or tactical designs that provide substantial ankle support to reduce the risk of injury during dynamic movements.
- **Functional Features:**
 - May include a side-zipper system to allow for rapid donning and doffing without compromising a secure fit.
 - Must utilize a secure lacing system to ensure a snug and customized fit for the wearer.
- **Environmental Suitability:**
 - The vendor must offer a range of boot options suitable for different operational environments, including models with waterproof membranes for wet or cold climates and highly breathable, lightweight designs for hot weather conditions.
