

CGCYBER IOM

Black Hat Intelligence Package

Opportunity • organization • contracts • competitors • relationships • red-team strategy

PURSUE AS PRIME — CONDITIONAL

Forecast F2026073117 | >\$100M | GSA Schedule | FFP
Forecast release: 23 September 2026 | Award: Q1 FY2027
Research current through 2 September 2026

CGCYBER Integrated Operations Management — public-source opportunity map

Authority • operating organization • adjacent contracts • competitors • capture actions | current 2 Sep 2026

SECTION 01

Intelligence cutline

Decision-ready answer first. The rest of the book shows the evidence, uncertainty, and actions behind it.

>\$100M	23 SEP	Q1 FY27	FFP
FORECAST VALUE	FORECAST RFQ	FORECAST AWARD	PRICING

VERDICT

Pursue as prime, but keep a hard gate. Sabre is vehicle-eligible and credible at scale; it does not yet have public proof of recent 24x7 Coast Guard SOC/CSSP delivery. The winning team must close that gap with a named operational partner, validated incumbent transition access, and a price-to-staffing model that survives FFP scrutiny.

What changed since the base assessment

FINDING	WHY IT MATTERS	CONF.
IOM is a consolidation, not clean greenfield work	The first APFS wording explicitly named CuOps, FuOps and Ops Support; archived standalone CuOps/FuOps forecasts then disappeared. [S1][S40][S41]	HIGH
Release risk is material	Forecast moved Apr 14 → May 28 → Jun 18 → Jul 30 → Sep 23; award moved to Q1 FY27 and value rose from \$50-100M to >\$100M. [S1]	HIGH
Four adjacent incumbency seams shape transition	OneOmega / IARMS, GovCIO / IMS-IPSS, Synergy / C5I apps, and Atlas / C5ISR engineering each control adjacent knowledge and workforce. [S11][S14][S17][S19]	HIGH
Historical NOSC incumbent is not current-incumbent proof	NetCentrics held the last public direct NOSC order found, ending Jan 2024. A bridge or successor has not been resolved. [S23][S24]	HIGH
The apparent CACI incumbent link is false	An aggregator mapped CuOps to CACI's unrelated \$1.2B CISA CDM bridge. Award agency, scope and ID prove it is not IOM lineage. [S42]	HIGH

Three gates before bid authorization

- Vehicle gate: confirm whether the RFQ is under 54151S, 54151HACS, specific HACS subgroups, or a restricted eBay pool. Sabre holds both 54151S and 54151HACS. [S27][S28]
- Delivery gate: secure verifiable 24x7 SOC/CSSP, DODIN, classified-environment, incident-response and transition credentials—preferably with named cleared staff.
- Economic gate: validate workload volumes and funded FTE. A >\$100M, ~5.25-year ceiling supports roughly 80-105 average FTE at \$190k-\$240k loaded annual pricing; 100-200 FTE is not yet supported by public data.

SECTION 02

Research rules and confidence

“Black hat” here means an adversarial capture lens applied to lawful public-source intelligence—not intrusion, impersonation, private-person targeting, or procurement interference.

LABEL	USE
FACT	Directly supported by an official or attributable public source.
INFERENCE	Analytic conclusion from multiple public facts; plausible but not confirmed by the government.
MEETING INTEL	User-provided note or market rumor; useful for collection priorities, not for external factual claims.
UNRESOLVED	Material question with no reliable public answer; must be closed through RFQ, Q&A, customer, or partner diligence.

Analytic standard

METHOD Evidence before narrative Award IDs, dates, organizations, current leadership and vehicle eligibility are checked against primary records where available. Aggregator data is treated as a lead and reconciled before use.	BOUNDARY People are stakeholders, not targets Only professional roles, public biographies and official contact routes are used. The report excludes private contact data, family, travel, credentials and other personal targeting material.
PROCUREMENT FIREWALL	Brian Campo's prior Sabre employment is a public relationship and credibility signal only. It is not evidence of inside access, favorable treatment, source-selection influence, or permission for off-channel contact. Engagement must follow official acquisition and ethics routes. [S8][S9]

Known research limits

- No public IOM PWS, RFQ, evaluation factors, bidder list, staffing matrix, service levels or transition plan was located as of 2 September 2026.
- GSA eBuy content may be visible only to eligible Schedule holders; public search cannot prove who received an RFQ or which SIN pool will apply.
- Current incumbent / bridge arrangements for CuOps, FuOps and Ops Support remain unresolved; public historical awards do not close that gap.
- Corporate capabilities and teaming interest are not proof of bid intent. Competitor ranks below are probability judgments, not confirmed bidder intelligence.

SECTION 03

Acquisition chronology and consolidation thesis

The repeated schedule movement, scope wording change and ceiling expansion are the strongest public signals of continuing requirement integration.

DATE	EVENT	PUBLIC SIGNAL
20 Feb 2026	Initial APFS	\$50–100M; CuOps, FuOps and Ops Support named; release Apr 14; award Q4 FY26
27 Feb	Scope generalized	Branch names replaced with “CG CYBER Branch”
11 Mar	Ceiling expanded	Dollar range changed to >\$100M
24 Apr	Release delay #1	Apr 14 → May 28
2 Jun	Term extended	Completion Jul 24 2031 → Jan 3 2032; release → Jun 18
25 Jun	Award slips	Release → Jul 30; award Q4 FY26 → Q1 FY27
10 Aug	Release delay #4	Release Jul 30 → Sep 23
2 Sep	Current assessment	No public RFQ/PWS located; forecast remains active

Consolidation model

SOURCE SCOPE	PUBLIC EVIDENCE	IOM INTERPRETATION	CONF.
Legacy CuOps	\$10–20M forecast; SDVOSB; 24x7 SOC, incident response, hunting, CGEMP/NIPR/SIPR	Likely absorbed into IOM operations core	HIGH
Legacy FuOps	\$10–20M forecast; SDVOSB; VETS 2; DCO planning, toolsets, web/apps, NIPR/SIPR/JWICS	Likely absorbed into IOM planning/engineering	HIGH
Ops Support	Named in initial IOM text; admin, budget/resources, security, training/exercises align to public CGCYBER department	Likely explicit IOM workstream	HIGH
CGCC-36 / -37 / AA	Public org contains DODIN, effects/protection and A&A; divisions; not all were named in original text	Possible interfaces or option scope	MED
BLMSS orphan scope	Cancelled vehicle included analytics, acquisition management, governance and IT infrastructure support	Some support tasks may migrate elsewhere, including IOM	LOW-MED

CAPTURE IMPLICATION

Write the solution as a single operating system for integrated cyber operations—mission-thread governance, current/future operations handoff, tool/data integration, workforce readiness, and no-loss transition—not as a collection of labor categories.

SECTION 04

Authority and customer organization

Two chains converge on IOM: the operational CGCYBER chain and the systems / acquisition / delivery chain created under Force Design.

ENTITY / PERSON	PUBLIC ROLE	WHY IOM CARES
Department of Homeland Security	Cabinet department	Parent department; APFS owner
U.S. Coast Guard	Armed service / DHS component	Mission owner and funding component
DCO → CGCYBER	Operational chain	Cyber mission execution; requirements and performance outcomes
RDML Jason P. Tama	Commander, CGCYBER	Command outcomes, mission risk, strategic direction
CAPT Joseph E. Meuse	Deputy Commander	Command integration and execution
CAPT Boris Montatsky	Director of Operations	Publicly identified operations leader; likely technical mission stakeholder
DCS — RDML Jon P. Hickey	Component Acquisition Executive / CAO	Enterprise acquisition, sustainment and lifecycle authority
James L. Knight	Executive Director for Systems / Deputy CAO	Cross-domain systems enterprise execution
Scott M. St. Pierre	PEO C5I/Cyber and CIO	C5I lifecycle, infrastructure and CIO authority
C5ISC — CAPT Benjamin Goff	Commanding Officer	C5I delivery command; transition and service dependencies
Kevin L. Achterberg	C5ISC Executive Director	Orchestrates >2,000-person C5I workforce
Brian D. Campo	Director, Technology Readiness / CDAO	Digital readiness, cyber readiness, architecture, data/AI transformation

Force Design structural consequence

Since 1 July 2025, PEO C5I manages the full acquisition-to-sustainment lifecycle and oversees C5ISC, while CGCYBER remains the operational cyber command. IOM therefore has to satisfy an operator-integrator dual customer: mission effectiveness for CGCYBER and disciplined service integration, architecture, security and transition for the systems enterprise. [S3][S4]

WHAT EVALUATORS MAY REWARD

A solution that turns cyber activity into observable mission outcomes—response speed, hunt coverage, readiness, exercise closure, workforce qualification, backlog reduction, control evidence and operational availability—while fitting C5ISC infrastructure and DCS lifecycle governance.

SECTION 05

CGCYBER and C5ISC operating structure

Public organizational truth is enough to build a credible work-breakdown skeleton, but not to assign names to every branch chief.

CODE	UNIT	PUBLIC / ANALYTIC MISSION
CGCC-2	Cyber Intelligence	Threat intelligence support to CGCC-3 and command; collaboration with CG, IC, DHS and DoD
CGCC-3	Operations Department	Umbrella for Current Ops, Future Ops, DODIN and Cyber Effects & Protection
CGCC-33	Current Operations	Likely center of 24x7 operational monitoring, response, coordination and battle rhythm
CGCC-35	Future Operations	Planning, requirements, exercises, operational design and future capability integration
CGCC-36	DODIN Division	Coast Guard portion of DODIN; NIPRNET/SIPRNET boundary is explicit in IOM
CGCC-37	Cyber Effects & Protection	Effects and protection capabilities; exact IOM boundary unresolved
CGCC-AA	Assessment & Authorization	Standardizes Coast Guard A&A; processes; direct interface with IARMS
Ops Support	Admin / budget / security / training	Named in original IOM scope and critical to staffing, clearance, readiness and exercises

C5ISC delivery interfaces

LAYER	COMPONENTS	IOM INTERFACE
Product lines	C2PL, COMPL, ISPL, MSSPL, OISPL, UCPL	Systems, applications, communications, intelligence, end-user and operational interfaces
Shared services	ALD, BOD, ESD, ISD, WFD	Logistics/finance, business operations, engineering, infrastructure, workforce/facilities
Highest IOM seams	ISD + ESD + BOD + MSSPL/OISPL/UCPL	Tool hosting, network/platform availability, engineering changes, service governance, application incidents

ORG-CHART CAVEAT

The foldout uses current public office names and current named senior leaders. Where no reliable public branch-chief name exists, the office—not an inferred person—is shown. [S2][S5][S6]

SECTION 06

Stakeholder and engagement map

Prioritize role-based discovery. Use only official acquisition, vendor-outreach and professional channels.

STAKEHOLDER	ROLE	DISCOVERY OBJECTIVE	PERMITTED ROUTE	PRIORITY
Shantia Allen	IOM POC	Acquisition status, RFQ mechanics, official Q&A;	APFS phone: 571-614-3267	HIGH
Jared Slizofski	Alternate IOM POC	Acquisition continuity and release	APFS phone: 703-313-6939	HIGH
Tanika Posey	Small Business / APFS coordinator	Subcontracting and small-business policy	APFS phone: 703-417-5568	MED
RDML Jason Tama	CGCYBER Commander	Mission outcomes and command priorities	Public command channel	HIGH
CAPT Joseph Meuse	Deputy Commander	Operational integration and readiness	Public command channel	MED-HIGH
CAPT Boris Montatsky	Director of Operations	CuOps/FuOps/DODIN operational outcomes	Public professional events / command channel	HIGH
Scott St. Pierre	PEO C5I/Cyber and CIO	Lifecycle, architecture and service integration	Official C5I channels	HIGH
CAPT Benjamin Goff	C5ISC CO	Delivery dependencies and transition	C5ISC official channel	MED-HIGH
Kevin Achterberg	C5ISC Executive Director	Workforce/service integration	C5ISC official channel	MED-HIGH
Brian Campo	Technology Readiness / CDAO	DTX, data, architecture, cyber readiness	Official CG-TECH channels only	MED
C5I Vendor Relations	Industry engagement office	Capabilities, routing and outreach	C5I-Vendor_Relations@uscg.mil [S7]	HIGH

ENGAGEMENT SEQUENCE

1) Confirm eBuy/SIN pool and release through the acquisition POCs; 2) route capability positioning through C5I Vendor Relations; 3) use public industry events and authorized customer meetings for mission discovery; 4) document every contact, source and restriction in the capture ethics log.

SECTION 07

Adjacent contract ecosystem — cyber and infrastructure

These awards do not prove IOM scope, but they identify the vendors, data, tooling, people and interfaces the IOM winner must cross.

PROGRAM	PRIME(S)	AWARD	VALUE / TERM	SCOPE	IOM SEAM	STAT E
IARMS	OneOmega (Alpha Omega + OneZero)	70Z04425DESD40001; first task 70Z04425FCAD20001	\$160M IDIQ / 5 years; first task reported ~\$45.9M	ISSO, ISSE, SCA, cyber compliance/readiness; site and vessel assessments	Direct cyber-adjacent; likely CGCC-AA / compliance seam	ACTIV E
IMS	Knight Point Systems / GovCIO; Blue Tech second BPA	70Z07923AISD20001 / 0002	\$345.3M task reported; program ceiling \$869M	Stabilize, secure and modernize enterprise IT; CSI integration	Upstream infrastructure, tools, networks, service management	ACTIV E
IPSS	GovCIO	Award metadata unresolved	Not publicly resolved	Vendor describes active Infrastructure Product Support Services	Likely IMS delivery / successor branding; validate	ACTIV E / UN RES.
VIA	Follow-on to Knight Point/GovCIO + Blue Tech IMS	Forecast F2025070444	>\$100M; planned 2026-2036	BOAs + single VIA-Sustain call; network, IT security, service desk, assets	Future infrastructure boundary; old forecast now stale	WATC H
NOSC support	NetCentrics	70Z07922FCYBR0002 / GS35F0579P	\$11.77M; public PoP ended Jan 2024	Network Operations Security Center support	Best public historical CuOps/NOSC lineage; current incumbent unresolved	HISTO RICAL
Cyber SME / CND	AveningTech	70Z07918FPNZ00200 / GS35F614GA	~\$5.6M; 2018-2019	NIPR/SIPR/JWICS CND, technical/operational/admin/sec urity	Language closely resembles IOM; legacy people/process knowledge	HISTO RICAL

OneOmega inconsistency to exploit analytically

The public solicitation was described as a new requirement with no incumbent, while Alpha Omega called the IARMS award a recompetes and retention. That does not invalidate the award; it indicates predecessor work or personnel history not cleanly represented in public metadata. Treat OneOmega as operationally embedded and demand transition-specific evidence from any teammate. [S11][S12][S13]

SECTION 08

Adjacent contract ecosystem — applications, C5ISR and transformation

The IOM winner will inherit dependencies beyond the SOC: application sustainment, engineering, OEM support, workforce and enterprise transformation.

PROGRAM	PRIME / INC.	ID	VALUE / TERM	SCOPE	IOM SEAM	STAT E
C5I sustainment bridge	Synergy	70Z0G326FESD30002	\$31.6M; Mar 2026–Mar 2027	Maintenance and support for CG-C5I systems/apps; one bid	Active app, DevSecOps, cyber and workforce knowledge	ACTIV E
Agile COMPASS STEW	Synergy incumbent; BPA call competitors unknown	F2026074167	\$50–100M; award Q1 FY27; to Jan 2029	Custom/legacy EIS design, development, optimization, audit mitigation	Concurrent procurement and staffing pressure; app incident/security integration	FORE CAST
C5ISR engineering	Atlas Technologies	N6523625F3024	\$220.9M; Sep 2025–Sep 2030; est. 234 FTE	Afloat/ashore C5ISR engineering, integration, testing, repair, training, sustainment	Maritime systems, field sites, engineering/configuration boundary	ACTIV E
PSSD	Public incumbent mapping says Patriot; verify	F2024066857	\$10–20M; stale 2025 forecast	Application incident lifecycle, accounts, training, transition	Ticket/case flow and user-facing service desk	WATC H
Microsoft Unified Support	Award unresolved	RFQ1665832 historical MRAS	Not resolved	Enterprise apps and systems; classified/unclassified OEM support	Microsoft platform escalation and classified environment	HIST./ WATC H
SANS training	Intended sole-source notice	SAM notice bd25...	3-year ordering period	Certification and continuing education	Cyber workforce qualifications / retention	ACTIV E / WA TCH
BLMSS	Would have replaced TeleSolv + D&G; support BPAs	Cancelled Jul 2025	\$500M planned	Analytics, acquisition mgmt, governance, cost, IT infrastructure support	Displaced support scope may reappear under IOM/DCS vehicles	CANC ELLED
DCS systems support	Java Productions incumbent	2026 forecast	>\$100M; OASIS+ SB	PM, analytics, transformation, architecture, logistics, governance	Parallel Force Design transformation and acquisition analytics	FORE CAST

TRANSITION DESIGN REQUIREMENT

Create an interface control plan naming each adjacent prime, system owner, queue, data feed, runbook, authority boundary, escalation path and acceptance test. The highest-risk bid is one that assumes IOM can operate independently of IARMS, IMS/IPSS, C5ISC apps and C5ISR engineering.

SECTION 09

Incumbent lineage, seams and OSINT traps

The strongest competitive intelligence is often the disciplined rejection of a convenient—but wrong—answer.

PERIOD	VENDOR	AWARD	VALUE	PUBLIC SCOPE	USE
2016	NetCentrics	CYBER-008-16	\$11.58M	CSOC-focused operations, IDS and technical support	Historical
2018–2019	AveningTech	70Z07918FPNZ00200	~\$5.57M	CGCYBER CND SME support across NIPR/SIPR/JWICS	Historical
2019–2020	NetCentrics	70Z07919FPNZ03200	\$5.20M	CGCYBER NOSC contractor workforce; sole-source bridge language	Historical
2020–2021	NetCentrics	70Z07920FPNZ03300	\$3.47M	NOSC support	Historical
2022–2024	NetCentrics	70Z07922FCYBR0002	\$11.77M	NOSC support; one offer; public end Jan 2024	Last direct public lineage
2025–2026	Unknown	Bridge / successor unresolved	Unknown	CuOps/FuOps/Ops Support performers not reliably public	Critical collection gap

FALSE CACI MAPPING — DISCARD

A market-intelligence page auto-linked the CuOps forecast to CACI award 47QFRA24F0005. The referenced award is a CISA Continuous Diagnostics and Mitigation DEFEND bridge, not a Coast Guard CGCYBER contract. Do not use it as incumbent evidence, past-spend lineage, or a reason to rank CACI as favored. [S42]

- Questions that resolve the incumbent
- What contract/order currently funds CGCC-33 watch floor, incident response, hunt and NOSC/CSSP functions?
 - Which incumbent personnel are government-designated key, badge-ready and likely to be captured?
 - What transition artifacts exist: shift rosters, SOPs, runbooks, data feeds, rules, dashboards, queues, exercise plans and knowledge repositories?
 - Does IOM replace, absorb, interface with or leave in place any IARMS, IMS/IPSS, C5ISC or DODIN labor?

SECTION 10

Competitive field —
probability-weighted

No bidder list is public. Rankings combine current Coast Guard adjacency, exact mission lineage, MAS eligibility, cleared workforce and likely ability to lead a >\$100M FFP order.

ENTITY	TIER	USCG ADJACENCY	VEHICLE	CG	CYBER	SCALE	FIT	BLACK-HAT READ
NetCentrics	T1	Historical NOSC / CG cyber TTPs	MAS 54151S / HACS claimed	5	5	4	3	Historical/probable legacy incumbent; current bridge unresolved
OneOmega	T1	Current \$160M IARMS	MAS 54151S; HACS not publicly listed	5	4	4	4	Embedded cyber-adjacent JV; exact SIN pool could constrain
GovCIO / Knight Point	T1	Current IMS/IPSS	GovCIO MAS 54151S / HACS	5	3	5	4	Owns infrastructure seam; direct SOC mission depth less visible
Synergy	T1	Current C5I bridge / COMPASS incumbent	MAS 54151S; HACS not found	5	2	4	4	Deep C5I app footprint; limited public 24x7 ops proof
Atlas Technologies	T2	Current \$220.9M C5ISR engineering	Vehicle fit for IOM unconfirmed	4	2	4	3	Maritime engineering scale; likely partner more than cyber prime
Booz Allen	T2	No IOM-specific proof found	MAS HACS / 54151S	2	5	5	4	Scale and cyber credibility; Coast Guard transition gap
GDIT	T2	No IOM-specific proof found	MAS HACS / 54151S	2	5	5	4	Large cleared operations bench; may price at scale
CACI NSS	T2	No valid IOM lineage found	MAS HACS / 54151S	1	5	5	4	Do not confuse CISA CDM bridge with USCG incumbency
AveningTech	T2 / sub	Historical exact-language CND SME	Current eligibility must be checked	3	3	2	3	Useful niche transition/history partner; old performance
MetTel	T3 / sub	No direct IOM proof found	Telecom / managed network strength	1	2	3	2	Meeting hypothesis; likely network/security supplier, not lead
Sabre Systems	SELF	Public USCG/federal civilian claims; NAVAIR cyber	MAS HACS / 54151S	2	4	4	4	Eligible, scalable; must close recent 24x7 CG SOC proof

Scoring: 1 = weak / unproven; 5 = strong. CG = public Coast Guard adjacency; Cyber = mission depth; Scale = >\$100M FFP readiness; Fit = likely IOM fit. Scores are analytic, not government ratings.

MOST LIKELY COMPETITIVE SHAPE

A Coast Guard-embedded actor leads or anchors each serious team, while a larger HACS-qualified integrator supplies scale, cleared staffing, proposal maturity and price confidence. The practical contest may be between transition knowledge and integrated operating-model credibility—not simply brand size.

SECTION 11

Tier 1 dossiers — how they win and where they break

These are the four firms / teams with the most consequential current or historical Coast Guard seams.

ENTITY	POWER BASE	VULNERABILITY / QUESTION	LIKELY MESSAGE	SABRE COUNTER
NetCentrics	Direct NOSC lineage; CG cyber TTPs; SOC/HACS positioning; cleared workforce	Last direct public NOSC PoP ended Jan 2024; current customer standing and staff retention unknown; PE ownership may sharpen growth and margin discipline	"Only we can transition the watch floor without mission loss."	Demand current—not historical—staffing, outcomes and recompute proof; outflank with transparent integration and measurable mission outcomes
OneOmega	Current \$160M IARMS; USCG cyber personnel, RMF evidence and vessel/site exposure; integrated JV	Potential delivery/transition load; IOM scope may create boundary/OCI questions; JV MAS shows 54151S but not public HACS	"We already own the cyber risk and compliance context."	Separate operations from assurance; make unbiased control evidence and incident-artifact handoff explicit; test SIN eligibility
GovCIO / Knight Point	Controls enterprise infrastructure, tools, networks and C5I integration under IMS/IPSS; scale and HACS	Infrastructure managed services are not the same as cyber command operations; possible boundary/OCI and FFP complexity	"We control the platform, so we can operate cyber most efficiently."	Turn platform dependency into a governed interface; show operator independence, joint service metrics and tool-neutral orchestration
Synergy	Deep C5ISC applications, DevSecOps, cloud and audit-remediation knowledge; active bridge and COMPASS incumbency	Thin public evidence of 24x7 watch-floor, hunt, incident command or DODIN operations; concurrent COMPASS pursuit/delivery load	"We understand the systems and application risk better than anyone."	Use Synergy as a likely interface/partner or attack the operations gap; emphasize SOC-to-app engineering closure and surge

Teaming posture

ENTITY	PREFERRED STANCE	CONDITION
NetCentrics	First-choice diligence target or primary threat	Only if it discloses current role, named staff, exclusivity, CPARS and prime intent
OneOmega	Selective interface / teaming dialogue	Resolve IARMS boundary, SIN eligibility, OCI and transition staffing
GovCIO	Infrastructure/interface partner	Avoid giving away prime control; document tool/data/service obligations
Synergy	Application/DevSecOps interface partner	Protect bid differentiation and manage concurrent COMPASS conflicts

SECTION 12

Tier 2 and wildcard dossiers

These firms can alter the field through scale, a specialist seam, or a teaming combination even without public IOM-specific incumbency.

ENTITY	STRENGTH	GAP	BLACK-HAT JUDGMENT
Atlas Technologies	Current \$220.9M USCG C5ISR engineering order; afloat/ashore integration and ~234 estimated FTE	Cyber ops / HACS prime fit not public	Strong maritime engineering or field-integration teammate; plausible prime only with cyber lead
Booz Allen	HACS, federal cyber scale, mission consulting and cleared talent	No public IOM/USCG operational lineage found in this research	Can lead a high-scoring technical narrative; needs transition anchor and price discipline
GDIT	HACS, very large network/cyber operations bench and staffing machinery	No public IOM-specific lineage; large-business cost structure	Can underwrite staffing and surge; strongest if paired with a Coast Guard incumbent
CACI NSS	HACS, scale, cyber and enterprise IT	The apparent CuOps mapping is demonstrably unrelated CISA work	Keep as credible generic bidder, not favored incumbent
AveningTech	Historical exact-scope NIPR/SIPR/JWICS CND and CGCYBER SME work	Performance is 2018–2019; current team, vehicle and customer standing need validation	High-value niche sub if it still holds personnel and references
MetTel	Managed network/security, SD-WAN/SASE and federal telecom capabilities	No direct IOM award or MAS professional-services prime evidence found	Meeting-note hypothesis; more credible as network/security OEM integrator than IOM prime

DO NOT OVERFIT THE HANDWRITTEN NOTE

GDIT, MetTel, Booz Allen and CACI appeared in the meeting note as market hypotheses. This research confirms general capability and, for Booz/GDIT/CACI, HACS eligibility—but not bid intent, eBuy access for this RFQ, customer shaping, or team composition.

Watch for late team formation

Because the ceiling grew and the release slipped, teams can still re-form around newly clarified scope. Monitor public hiring patterns, Schedule CTA announcements, partner press releases, SAM representations and official eBuy/RFQ distribution—without misrepresenting identity or soliciting procurement-sensitive information.

SECTION 13

Vehicle eligibility and teaming architecture

The RFQ's exact MAS SIN and subgroup decision could reorder the field immediately.

ENTITY	MAS CONTRACT	RELEVANT SIN(S)	HACS	IOM EFFECT
Sabre	GS-35F-366BA	54151HACS + 54151S	YES	Prime-capable; validate HACS subgroups in RFQ
NetCentrics	Company MAS page / current eLibrary detail to reconfirm	54151HACS + 54151S claimed	LIKELY	Strong mission/vehicle fit; obtain current contract evidence
OneOmega	47QTCA24D0084	54151S + OLM	NO PUBLIC HACS	Eligible if 54151S; may need CTA/member if HACS-only
GovCIO / Salient	47QTCA21D001Y	54151HACS + 54151S	YES	Prime/member eligible
Synergy	GS-35F-0495Y (public company materials)	54151S	NO PUBLIC HACS	Likely 54151S member; verify current terms
Booz Allen	GS-35F-386DA / 47QREA21D0001	54151HACS + 54151S	YES	Current unrestricted MAS path exists
GDIT	GS-35F-393CA	54151HACS + 54151S	YES	Prime-capable
CACI NSS	GS-35F-349CA	54151HACS + 54151S	YES	Prime-capable

Recommended Sabre structure

ROLE	CONTRIBUTION	NON-NEGOTIABLE EVIDENCE
Sabre — prime / CTA lead	Integrated operating model, program controls, digital engineering, cyber mission assurance, quality, price governance	Current MAS eligibility; >\$100M scale; named executive and PM accountability
24x7 cyber-ops anchor	Current operations, incident command, hunt, SIEM/SOAR/EDR, DODIN and cleared watch floor	Recent comparable CPARS, staffing roster, transition references, Schedule eligibility
USCG transition anchor	Incumbent people, runbooks, workflows, tools, badges and customer knowledge	Current—not historical—role, named personnel availability and no conflicting exclusivity
Specialists	FuOps/planning, data/automation, RMF interface, exercises/training, maritime/OT or JWICS as PWS demands	Task-specific proof and capped workshare

CTA DECISION

GSA permits MAS CTAs unless the buyer prohibits them. Use a CTA only if it materially closes SIN, past-performance or labor-category coverage. Otherwise, a prime/sub structure is simpler and preserves accountability. [S29]

SECTION 14

Black-hat red team — how competitors will attack Sabre

Assume evaluators hear the most damaging plausible interpretation first. Neutralize it with evidence, not adjectives.

ATTACK NARRATIVE	RISK	WHY IT LANDS	EVIDENCE-BASED COUNTER
"Sabre has no recent Coast Guard watch-floor incumbency."	HIGH	The public record supports this gap.	Add a current 24x7 federal SOC/CSSP anchor, named staff and referenceable outcomes; make transition evidence volume 1.
"NAVAIR cyber is engineering—not enterprise DODIN operations."	HIGH	Mission adjacency is real but not equivalence.	Map each requirement to exact outcomes, shift model, authorities, tools and incidents; avoid generic past-performance reuse.
"A former Sabre executive at USCG creates optics or ethics risk."	MED	The prior role is public and will be noticed.	Create a written firewall, counsel review and official-channel-only engagement. Do not imply access in any narrative.
"Sabre cannot staff 100+ cleared FTE quickly."	HIGH	Public evidence does not prove the IOM staffing engine.	Named transition roster, recruiting funnel, compensation bands, clearance aging, surge partners and retention guarantees.
"A newcomer will underprice FFP and fail transition."	HIGH	FFP plus unclear volumes creates credible risk.	Use workload model, productivity assumptions, service credits, staffing floor, controlled automation and phase-gate acceptance.
"The team is a logo parade with fractured accountability."	MED-HIGH	Likely if too many adjacent incumbents are recruited.	One operating model, single RACI, integrated governance, common tooling/data layer and outcome-based workshare.
"Sabre's Coast Guard relationship claims are stale or marketing-only."	MED	Public company claims alone are insufficient.	Only use validated contract facts and authorized references; clearly separate corporate experience from proposed-team experience.

Self-inflicted loss modes

- Treating the APFS forecast date as a committed release and mobilizing proposal cost too early.
- Letting an incumbent partner control customer narrative, staffing, price or proposal evidence without reciprocal exclusivity.
- Pricing the handwritten 100–200 FTE estimate before volumes, shifts, government-furnished tools and surge rules are known.
- Claiming RMF/IARMS work inside IOM without resolving role separation and organizational conflicts.
- Using the Brian Campo history as a win theme rather than a compliance-managed background fact.

SECTION 15

Sabre counter-strategy and win themes

Win on integrated operations, transition certainty and decision advantage—not on broad corporate capability.

WIN THEME	PROMISE	PROOF / MEASURE
Mission-time operations	Convert cyber operations into more minutes on mission, faster decisions and protected DODIN availability.	MTTD/MTTR, mission-impact minutes, hunt coverage, restore time, unresolved risk aging
No-loss transition	Treat workforce, access, runbooks, queues, detections, data and exercises as one transition baseline.	Day-1 watch coverage, badge/clearance readiness, retained incumbents, accepted runbooks, zero missed alerts
One operating system	Unify CuOps, FuOps and Ops Support through a common battle rhythm, workflow, data model and governance.	Handoff quality, plan-to-operation cycle time, exercise closure, staffing/qualification readiness
Boundary-by-design	Define clean service interfaces with IARMS, IMS/IPSS, C5ISC apps, C5ISR and OEM support.	Interface SLAs, escalation time, ticket rejection/rework, control evidence completeness
Evidence over theater	Automate authoritative reporting and trace every outcome to source data, decisions and controls.	Dashboard latency, auditability, false-positive reduction, report production effort
FFP resilience	Price observable workload and productivity—not an aspirational staffing number.	Cost per incident/hunt/shift, staffing floor, surge bands, automation yield, vacancy days

Recommended discriminator

CYBER MISSION
THREAD CONTROL
TOWER

A deployable operations-management layer that links mission priorities, threat intelligence, incidents, hunts, vulnerabilities, RMF evidence, engineering changes, staffing qualifications and exercises in one authoritative decision rhythm. The differentiator is not a new dashboard; it is the governance and data contract across existing government and adjacent-prime tools.

- Proof package to build before RFQ
- One-page no-loss transition storyboard with day 0 / 30 / 60 / 90 acceptance criteria.
 - Comparable 24x7 cyber-ops case with incidents, users/systems, networks, shifts, tools, clearances and measurable outcomes.
 - Interface-control matrix for IARMS, IMS/IPSS, C5ISC apps, C5ISR and OEM escalation.
 - Named staffing model with key personnel, cleared bench, capture targets, recruiting conversion and retention assumptions.
 - FFP basis-of-estimate that visibly ties labor, tools, travel/ODCs, escalation, surge and productivity to workload.

SECTION 16

Price, staffing and FFP stress test

The public ceiling supports a bounded workforce range; it does not validate the meeting-note estimate of 100–200 people.

ASSUMED CEILING	LOADED \$/FTE-YR	AVG FTE OVER 5.25 YR	INTERPRETATION
\$105M	\$190k	~105	Aggressive labor-heavy case; little room for ODC/travel/fee unless rates are lower
\$105M	\$215k	~93	Middle case before non-labor and management reserve
\$105M	\$240k	~83	High-clearance / senior mix; leaves little margin for 100+ average FTE
\$125M	\$215k	~111	Plausible 100+ average FTE if ceiling materially exceeds the minimum
\$150M	\$215k	~133	Could support large 24x7 organization; actual ceiling remains unknown
\$200M	\$215k	~177	Required for upper end of meeting estimate; no public evidence of this ceiling

Illustrative only: ceiling ÷ 5.25 years ÷ loaded annual price. It excludes the effect of non-labor cost, fee, surge, transition overlap and partial-year profiles.

FFP risk register

RISK	TRIGGER	MITIGATION / PRICING TREATMENT
Unbounded incident / surge volume	No historical volumes or surge CLIN	Volume bands, defined surge events, staffing floor/ceiling, separate surge CLIN if permitted
Tool/data dependency	Government or adjacent prime delays access	Assumption register, dependency SLAs, equitable adjustment language where allowed
Clearance and badge lag	Named staff cannot start	Pre-cleared bench, transition overlap, vacancy backfill commitments and pricing reserve
Incumbent capture premium	High compensation / retention costs	Targeted key-person bonuses, bounded salary bands, knowledge-transfer alternatives
Scope migration	BLMSS/VIA/IARMS tasks move into IOM	Map each task to CLIN, labor driver and change-control threshold
Automation overpromise	Savings assumed before data/tool access	Treat automation as earned productivity with pilot gates, not day-one price takeout

SECTION 17

Ten-day capture sprint

The near-term goal is not a finished proposal. It is a defensible bid gate, locked core team and evidence-backed operating model before the forecast release.

WHEN	OWNER	ACTION	OUTPUT
D0-1	Capture lead	Open ethics/contact log; verify eBuy access, MAS SINs and APFS release status	Vehicle gate + official inquiry
D0-2	Competitive lead	Resolve current CuOps/FuOps/Ops Support contract IDs and prime/sub performers	Incumbent lineage memo
D1-3	Partner lead	Diligence NetCentrics, OneOmega, GovCIO, Synergy, AveningTech and one scalable SOC alternative	Prime intent, exclusivity, conflicts, evidence
D1-4	Solution lead	Build CGCC-33/35/Ops Support operating model and adjacent-contract interface map	Solution v0.7 + RACI
D2-5	Staffing lead	Identify PM, Ops Director, watch leads, hunt/IR, FuOps, security, training and transition key staff	Named staffing heat map
D3-6	Pricing lead	Create workload-based FFP model at \$105M/\$125M/\$150M and 80/100/125 FTE	BOE and risk reserve
D4-7	Past performance	Select three exact-comparable references and map gaps	Evidence matrix; reference permissions
D6-8	Red team	Score likely evaluation, transition, price and OCI attacks	Discriminator and weakness closure plan
D8-9	Executive team	Run Gate 0: vehicle, customer, competition, team, solution, staffing, price, risk	Prime / sub / no-bid decision
D10	Capture lead	Lock team instruments and launch RFQ-response room	Signed teaming path + proposal calendar

Collection questions that change the bid

DOMAIN	DECISIVE QUESTION
Vehicle	Which SIN(s), HACS subgroups and eBuy pool apply; are CTAs permitted?
Scope	Which exact branches/divisions, networks, sites, tools and shifts are funded?
Incumbent	Who performs each function today under what award; what bridge exists?
Volumes	Incidents, alerts, hunts, systems, users, tickets, exercises, reports and surge history?
Security	Facility clearance, SCI/JWICS, DCWF/8140, citizenship and key-person requirements?
Transition	Government-furnished people/data/tools; overlap; acceptance; incumbent cooperation?
Interfaces	Boundaries with IARMS, IMS/IPSS, C5ISC apps, C5ISR, PSSD and OEM support?
Evaluation	Factors, relative weight, past-performance size/recency, oral/demo, staffing commitments?
Economics	Ceiling, CLINs, travel/ODCs, surge, escalation, staffing floors and service credits?

VERSION NOTE

This supplement supersedes the competitive ranking and adjacent-contract picture in the appended 1 September base assessment. The base report remains included for its deeper opportunity, risk, question-bank and handwritten-note reconciliation sections.

Appendix A — Core Opportunity Assessment

Previously built 22-page assessment: opportunity facts, mission, capture gates, solution, staffing, economics, risk, question bank and source-note reconciliation.

Integrated Operations Management (IOM)

Opportunity & Capture Assessment

A decision-ready report for Sabre Systems: acquisition facts, customer context, competitive posture, teaming choices, solution thesis, fixed-price economics, and a 10-day capture sprint.

>\$100M	23 SEP 2026	GSA MAS
APFS VALUE RANGE	FORECAST SOLICITATION	FFP · UNRESTRICTED

RECOMMENDATION	PURSUE AS PRIME — CONDITIONAL	72-hour Gate 0: vehicle visibility · Coast Guard proof · cleared scale · partner lock
----------------	----------------------------------	---

Prepared for Sabre Systems · 1 September 2026

INTERNAL BUSINESS DEVELOPMENT — NOT FOR EXTERNAL DISTRIBUTION
Open-source research plus unattributed meeting notes. Validate all assumptions before proposal use.

SECTION 01

Executive decision

A strong strategic target with a weak clock: prime only if Sabre closes four proof gaps immediately.

HIGH	MED	LOW-MED	HIGH
OPPORTUNITY ATTRACTIVENESS	STRATEGIC FIT	CURRENT WIN POSITION	EXECUTION RISK

BOTTOM LINE

Pursue as prime, conditionally. Sabre is vehicle-qualified and the requirement sits directly in its cyber / digital-engineering growth lane. But the forecast is only 22 days from this report, the public scope implies 24x7 cleared operations at scale, and Sabre's public record does not yet prove a Coast Guard cyber-operations program of this size. Run a 72-hour Gate 0. If vehicle access, customer proof, cleared staffing, and an operations-credible teammate do not clear, pivot early to a strategic-sub posture.

Decision logic

DECISION	ASSESSMENT
Why pursue	New, unrestricted GSA MAS requirement above \$100M; Sabre holds MAS SINs 54151HACS and 54151S; scope spans defensive cyber operations, analytics, management, and DoDIN defense. [1][3][4]
Why Sabre can matter	Relevant platform cyber, digital engineering, software/data, federal civilian delivery, CMMI ML3 and ISO service/security credentials. Sabre publicly lists USCG among civilian customers, but contract-level proof must be assembled. [19]-[23]
Why the win is hard	Late capture; likely 6-7 serious competitors per meeting intel; 100-200 FTE estimate is unverified; fixed-price 24x7 operations punish bad workload and relief-factor assumptions.
Best prime shape	Sabre owns program integration, evidence/data layer, workforce modernization, platform cyber, service control, and transition. A Coast Guard-embedded operations partner owns day-one CuOps credibility and labor capture.
Fallback	Become a high-value sub with a defined 15-30% workshare in integration, data/evidence, platform cyber, automation, training, or transition—before the winning primes finish their teams.

Analyst win range

Directional capture ranges only—not a statistical forecast. Use them to force gate decisions, not to claim precision.

The four must-win proofs

- Invitation and scope: confirm eBuy visibility, exact SIN/subgroup, acquisition office, and whether any RFI/RFQ was released privately.
- Past performance: identify two recent prime examples that map to 24x7 cyber operations, DoDIN defense, or an equivalently scaled FFP service.
- Day-one workforce: demonstrate a named cleared-staff pipeline, 24x7 relief factors, transition capture, and NCR compensation assumptions.
- Customer credibility: obtain compliant mission discovery and a teammate with verifiable CGCYBER operations outcomes—not merely Coast Guard adjacency.

SECTION 02

Opportunity facts & acquisition posture

The note is directionally right; the public forecast sharpens the value, vehicle, release date, and scope boundaries.

FIELD	PUBLIC POSITION	STATUS
Forecast ID	F2026073117	Verified
Title	Coast Guard Cyber Command Integrated Operations Management (IOM)	Verified
Component	USCG / CG-C5I	Verified
Status	New requirement; competition: yes; no set-aside / no small-business program	Verified
Vehicle	GSA Schedule; exact SIN and eBuy invitation pool not public	Verified / open
Contract type	Firm Fixed Price	Verified
NAICS	541519 — Other Computer Related Services	Verified
Value	Over \$100M; changed from \$50M-\$100M on 11 Mar 2026	Verified
Forecast release	23 Sep 2026; date has slipped four times	Verified
Forecast award	Q1 FY2027	Verified
Completion	3 Jan 2032; exact base / option structure not public	Verified / open
Place	Washington, DC	Verified
Public documents	No public RFI, PWS, RFQ, evaluation criteria, Q&A;, or interested-party list located	Research finding

Forecast history

ACQUISITION READ

The recurring slips suggest the requirement or acquisition package is still moving; they do not justify waiting. Because APFS specifies a GSA Schedule order, the operative document may appear in GSA eBuy rather than SAM.gov. Treat “full and open” as unrestricted within the eligible MAS / SIN pool, not as an open-market competition. [1][5]

Immediate official-channel questions

- Has the market-research or solicitation package been released in eBuy under another title or RFQ number?
- Which SIN(s) and, if 54151HACS, which HACS subgroups will be mandatory?
- Will the order use a single prime, a Contractor Team Arrangement (CTA), or permit both CTA and prime/sub structures?
- Is 23 September still the working release date, and will an industry day, draft PWS, or Q&A; precede it?

SECTION 03

What is fact, intelligence, or inference?

Every material assertion is tagged so the team knows what can go into a gate brief—and what must stay in an assumptions log.

A	B	C	D
PRIMARY-SOURCE VERIFIED	CORROBORATED SECONDARY	MEETING INTELLIGENCE	ANALYTIC INFERENCE

CLASS	ASSERTION	AUTHORIZED USE	CONF.
A	Value >\$100M; GSA Schedule; FFP; no set-aside; Sep 23 release; Q1 FY27 award; Washington, DC	Use in gate brief and pipeline record	High
A	Initial APFS text explicitly named CuOps, FuOps, and Operations Support; current text generalizes to 'CG CYBER Branch'	Use to build PWS hypotheses, not to lock workshare	High
A	Sabre MAS contract lists 54151HACS and 54151S	Use as vehicle-eligibility basis; verify exact RFQ subgroup	High
B	OneOmega won a five-year \$160M USCG IA/RMF IDIQ covering ISSO, ISSE, SCA, compliance/readiness	Treat as adjacent contract and competitor/teammate signal	High
C	100-200 FTE; 6-7 Tier-1 competitors; GDIT / MetTel / Booz Allen / CACI; team final in ~1.5 weeks	Capture urgency and staffing model only; validate	Low-Med
C	Legacy incumbent is failing	Do not repeat externally; identify the contract, task, measures, and source	Low
D	IOM consolidates prior CuOps, FuOps, and support requirements	Strong working hypothesis based on forecast lineage; not confirmed	Med-High
D	No public solicitation likely means eBuy/private release path	Actionable acquisition hypothesis; confirm with Authorized Negotiator	Medium

PROCUREMENT-INTEGRITY GUARDRAIL

Existing relationships—including a former Sabre executive now in Coast Guard technology leadership—can support lawful mission discovery and strategic context. They must not be used to seek nonpublic source-selection, evaluation, competitor, or procurement-sensitive information. Log all customer interactions and route acquisition questions through official channels.

Assumptions log — required fields

ASSUMPTION	OWNER	VALIDATE BY	EVIDENCE / DECISION IMPACT
Exact SIN and eBuy pool	Contracts	48 hours	Bid eligibility; CTA need
100-200 FTE and 24x7 footprint	Solution / HR	Draft PWS	Price, transition, clearance risk
IOM / IARMS boundary	Cyber lead	Customer / PWS	OCI, teaming, solution architecture
Legacy dissatisfaction	Capture	Customer interviews	Transition theme; incumbent strategy
Named competitor field	Competitive intel	Before black hat	Discriminators and price-to-win

SECTION 04

Likely requirement decomposition

The public record supports an integrated operations construct; the detailed task mix remains a hypothesis until the PWS arrives.

MISSION LANE	EVIDENCE	LIKELY WORK	SABRE POSTURE	CONF.
Current Operations / CGCC-33	Original APFS + legacy CuOps forecast	24×7 SOC, incident response, threat hunting, monitoring, operational reporting, battle rhythm	Partner-led day-one ops; Sabre service integration	High
Future Operations / CGCC-35	Original APFS + legacy FuOps forecast	DCO planning, security analysis, evaluations, control assessments, exercises, technical documentation, tool-data analysis	Sabre platform cyber, digital engineering, data	High
DoDIN / CGCC-36	Current APFS + public org	Protect and defend USCG NIPRNET and SIPRNET portions of DoDIN; cross-domain coordination	Joint Sabre + cleared ops partner	High
Cyber Effects & Protection / CGCC-37	Public org / mission context	Protection teams, cyber effects, MTS interfaces, expeditionary or maritime awareness	Niche OT / maritime partner; do not assume core IOM scope	Med-Low
Operations Support	Original APFS + public org	Training/exercises, security processing, resources, administration, readiness and reporting	Sabre PMO + workforce academy	High
A&A; / risk evidence	Adjacent org + IARMS	Operational evidence, ConMon feeds, risk dashboards, authorization handoffs	Integrate with IARMS; avoid duplicating ISSO/ISSE/SCA scope	Medium

Public scope anchor

APFS WORDING

The contractor will provide technical, operational, administrative, and security-management services plus analytical support and cyber SMEs for protection and defense of USCG systems, data, and infrastructure on NIPRNET and SIPRNET portions of the DoDIN. The initial record named CuOps, FuOps, and Operations Support; the current record uses the broader “CG CYBER Branch.” [1]

Scope traps to avoid

- Do not assume JWICS: it appeared in the earlier FuOps forecast, but not in the current IOM public description.
- Do not equate CGCYBER's maritime mission with an IOM requirement for vessel or port OT support; establish that only from the PWS.
- Do not duplicate OneOmega's IARMS ISSO/ISSE/SCA/compliance lanes. Design an evidence interface and a clear RACI.
- Do not price an FFP labor pool until service volumes, severity mix, operating hours, government-furnished tools, and transition conditions are baselined.

Likely evaluation center of gravity

FACTOR HYPOTHESIS	WHY IT SHOULD MATTER	PROOF TO PREPARE
Technical / operations approach	Mission continuity across multiple branches and networks	Integrated battle rhythm, runbooks, surge model, authority interfaces
Past performance	Scale and operational consequence	Recent comparable size, 24×7, cleared, FFP / service outcomes
Staffing / transition	100–200 FTE capture estimate and security processing	Named leaders, capture pipeline, relief factors, 30/60/90 plan
Management / quality	Multi-branch integration and fixed-price control	Service catalog, QASP mapping, CMMI / ISO, demand ledger
Price	FFP and likely labor-intensive order	GSA rate alignment, discounts, mix, escalation, contingency logic

SECTION 05

Customer, operators & influence map

Engage for mission outcomes and acquisition clarity; never infer source-selection authority from organizational seniority.

STAKEHOLDER	PUBLIC ROLE	DISCOVERY OBJECTIVE	STATUS
RDML Jason P. Tama	Commander, CGCYBER	Mission outcomes, readiness, operational risk, integration across departments	Verified [2]
CAPT Joseph E. Meuse	Deputy Commander	Execution governance, workforce/training perspective, command integration	Verified [2]
CAPT Boris Montatsky	Director of Operations, CGCYBER	CuOps/FuOps pain, operational measures, defense workflow, transition risk	Corroborated [26]
CGCC-33 / -35 / -36 / -37	Operations divisions	Workload, tooling, duty model, interfaces, surge, data and reporting	Verified [2]
Operations Support	Training, security, budget/resources, administration	Clearance process, qualification, exercises, readiness metrics	Verified [2]
CGCC-AA	Assessment & Authorization	IOM evidence consumption, control ownership, IARMS boundary, automation opportunities	Verified [2]
Brian D. Campo	Director, Technology Readiness / CDAO	Enterprise digital-readiness, data/AI, architecture and workforce context—not procurement inside information	Verified [24][25]
Shantia Allen / Jared Slizofski	APFS procurement points of contact	Release status, official package path, SIN, industry communications	Verified [1]

Organization-to-solution alignment

COMMAND	OPERATIONS	AUTHORITY / SUPPORT	ACQUISITION / TECH
RDML Tama mission assurance	CGCC-33 CuOps CGCC-35 FuOps CGCC-36 DoDIN CGCC-37 effects & protection	CGCC-AA Ops Support training · security · resources	CG-C51 / HCA APFS POCs CG-TECH / TRT
OUTCOME	INTEGRATED OPERATIONS	EVIDENCE + READINESS	ORDER + ARCHITECTURE

RELATIONSHIP ADVANTAGE—USE CORRECTLY

Brian Campo's former Sabre leadership is a legitimate context and access advantage: he now leads Coast Guard technology-readiness, enterprise architecture, cyber-readiness, data, and AI. Use the relationship to understand mission direction and how industry can deliver better outcomes. Keep opportunity-specific acquisition questions with the contracting channel, and never seek protected competitor or evaluation information. [24][25]

SECTION 06

Mission drivers shaping the buy

IOM is more than SOC staffing: Coast Guard strategy pushes integrated operations, workforce readiness, data speed, and maritime resilience.

DRIVER	WHAT IT SAYS	CAPTURE IMPLICATION
Force Design 2028	Strengthen CGCYBER; streamline contracting; create accountability; grow the military workforce by at least 15,000 by FY28; exploit advanced technology, data, and human-machine teaming.	Offer a scalable operating model with clear ownership, automation, and workforce transfer—not a collection of resumes. [10]
Digital Transformation Strategy	Increase “minutes on mission,” automate repetitive work, deliver near-real-time data, improve coordination, field capability faster, and build digital literacy.	Measure uniformed hours returned, decision-cycle time, automated evidence, adoption, and time-to-qualification. [11]
MTS cyber pressure	The 2025 rule created baseline cyber-plan, officer, detection, response, and recovery obligations. CGCYBER reported a 35% increase in OT-testing demand; phishing succeeded in 53% of CPT missions; 273 KEVs were found.	Design for maritime / edge constraints and operator training, while distinguishing IOM enterprise scope from external MTS support. [12][13]
Workforce transformation	Ready Workforce 2030 emphasizes recruiting, retention, modernized training, and member support. The CMS rating launched with 260 enlisted and 20 warrant billets.	Make contractor labor a force multiplier with mission-qualification pathways and progressive knowledge transfer. [14][16]
DoDIN integration	CGCYBER defends its portion of DoDIN and operates with DHS / DoD partners. DoD's CSRMC emphasizes automated, continuous, operational risk management.	Use CSRMC-aligned interfaces where applicable, while preserving DHS / USCG RMF and Authorizing Official authority. [1][2][17]

THE 1,200-PERSON CORRECTION

The note's “1,200 uniformed cyber staff” is almost certainly a reference to 1,200 active-duty Marine Science Technicians (MSTs) who were to receive training on cyber issues—not 1,200 CGCYBER operators. The proposal should not size IOM labor or a cyber academy around that number without PWS confirmation. [15]

Outcome language to mirror

TIME	SPEED	READY	RESILIENT
MINUTES RETURNED TO MISSION	THREAT-TO-DECISION CYCLE	MISSION-QUALIFIED WORKFORCE	OPERATE THROUGH DISRUPTION

Proposal thesis

CGCYBER does not need another labor pool that reports activity. It needs an integrated operating system that converts people, telemetry, authorities, and branch workflows into measurable mission capacity—while leaving uniformed members more time for inherently governmental and operational judgment.

SECTION 07

Contract lineage & adjacent scope

The strongest open-source explanation is a consolidation of previously forecast branch-level buys, with IARMS remaining an adjacent risk-management lane.

Working consolidation hypothesis

PRIOR / ADJACENT	PUBLIC SIGNAL	LIKELY RELATION TO IOM
CuOps Cybersecurity Services F2025070259	Recompete · \$10-20M · SDVOSB · 24x7 SOC, incident response, threat hunting · Washington, DC	Likely contributes current-operations workload, personnel, and transition dependencies. Forecast is no longer live at its original APFS URL. [8]
FuOps Support Services F2025070315	New · \$10-20M · SDVOSB · FFP · defensive ops, analysis, assessments, docs, DoD tools · NIPR/SIPR/JWICS	Likely contributes future-operations planning and technical-analysis work. JWICS must not be assumed for IOM. [9]
Operations Support	Named in initial IOM APFS record; public org includes training/exercises, security, resources, administration	Likely new integration / readiness lane under IOM. [1][2]
OneOmega IARMS	Five-year · \$160M IDIQ · ISSO, ISSE, SCA, compliance/readiness · facilities and vessels	Adjacent A&A; / RMF lane. Build a telemetry-to-evidence interface; avoid scope duplication and assess OCI. [6][7]

INFERENCE—NOT FACT

IOM's initial description explicitly named CuOps, FuOps, and Operations Support; two prior branch-level forecasts were due to start in 2026 and are no longer live at their APFS pages. This makes consolidation a medium-high-confidence working hypothesis. It does not prove which contracts, incumbents, personnel, or task boundaries will transition.

Why this matters for capture

- A “new requirement” can still contain incumbent people, tools, and branch practices from multiple legacy efforts.
- The winning transition plan must map staff and knowledge at the task level rather than treating “the incumbent” as one company.
- Legacy small-business primes may have superior customer intimacy and labor capture even if they cannot—or choose not to—prime the unrestricted IOM order.
- IARMS creates both a teaming bridge and a boundary risk. OneOmega may be a valuable partner, a formidable prime, or both.

Transition diligence map

DISCOVER	WHY	OUTPUT
Legacy contract / task IDs	Find actual employers, periods, and option cliffs	Incumbent map
Branch-by-branch billet roster	Separate essential staff from low-value labor	Capture / replace matrix
Tool and data ownership	Avoid transition failure from inaccessible workflows	GFE / license / interface register
SLA and workload history	Build defensible FFP volume assumptions	Demand baseline
IARMS RACI	Prevent scope collision and duplicated evidence work	Interface control document

SECTION 08

Competitive landscape

No bidders are publicly confirmed. The note supplies a plausible Tier-1 field; OneOmega is the highest-confidence Coast Guard-adjacent threat.

COMPETITOR	CG INTIMACY	CYBER OPS	SCALE	LIKELY STRENGTH	SABRE RESPONSE
OneOmega / Alpha Omega + OneZero	High	High	Medium	Current \$160M USCG IARMS footprint; RMF/IA access; Coast Guard retention win	Can prime or team; assess OCI, capacity, and exclusivity immediately
GDIT	Unverified	Very high	High	Massive enterprise network / cyber-ops scale; recent \$1.3B Guard network-operations award	Likely strongest on scale, staffing, and operations proof; differentiate on attention, integration, and price [18]
Booz Allen	Unverified	Very high	High	Cyber warfighting, zero trust, analytics, cleared workforce, strategic access	Expect strong mission narrative and talent bench; attack cost / bureaucracy and emphasize measurable transfer
CACI	Unverified	High	High	DoDIN / mission technology, cyber, cleared scale, operational execution	Expect technical credibility and aggressive capture; require branch-level customer proof
MetTel	Unverified	Med-High	Medium	Managed network, MTIPS, zero trust, federal network operations	Potential network / managed-service angle; test fit to integrated cyber command operations
Sabre	Published USCG experience; CGCYBER depth open	Medium	Medium	Vehicle eligible; platform cyber + digital engineering; nimble; growth posture; former executive connection	Needs day-one ops proof, labor scale, and Coast Guard task-level past performance

DO NOT BRIEF GUESSES AS BIDDERS

The handwritten “6–7 Tier-1” and company names are meeting intelligence, not a public interested-party list. The report treats them as black-hat candidates only. Ask each prospective teammate whether it intends to prime and whether it is exclusive—without representing that any company is confirmed in the competition.

Likely evaluator contrast

ARCHETYPE	ADVANTAGE	VULNERABILITY	WIN MOVE
Tier-1 scale	Large bench, transition machinery, broad past performance	High overhead, generic labor, diluted executive attention	Named leaders + outcome ledger + branch-integrated operating model
Coast Guard incumbent	Customer intimacy, people, tools, day-one continuity	May lack prime scale or integrated modernization story	Prime integration + protect key staff + elevate customer outcomes
Cyber boutique / JV	Specialized talent, price, mission intimacy	Depth, corporate controls, surge capacity	CMMI / ISO / large-program controls + niche partner
Sabre	Nimble systems thinking; vehicle; platform cyber; data / digital engineering	Late capture; scale / CGCYBER proof gaps	Close proof gaps, avoid broad “we do cyber” claims

Black-hat questions

- Who already employs the critical CuOps / FuOps leaders, and what retention or noncompete constraints exist?
- Which competitor can cite a recent FFP, 24×7, cleared cyber-operations program at \$100M+ scale?
- Who holds the strongest GSA HACS subgroups and negotiated labor rates for the likely task mix?
- What will a Tier-1 claim Sabre cannot do—and what proof neutralizes the claim?

SECTION 09

Sabre fit, gaps & proof plan

Sabre is eligible and relevant; the bid must turn adjacent capability into CGCYBER-scale operational proof.

Fit scorecard

DIMENSION	READ	EVIDENCE / GAP
Vehicle / NAICS	Strong	MAS GS-35F-366BA; NAICS 541519; SIN 54151HACS and 54151S; option through May 2029, ultimate May 2034 [3]
Cyber technical fit	Strong	Systems, platforms, networks, applications; red teaming, live-fire T&E; security engineering, offensive / defensive effects [20][21]
Digital / data integration	Strong	NAVAIR digital transformation, cloud, data, AI, automation, cyber engineering; relevant to integrated operations and evidence automation [19]
Large-program control	Moderate-Strong	Current \$199.98M NAVAIR digital-services IDIQ and CMMI DEV/SVC ML3; ISO 9001, 20000-1, 27001 [22][28]
USCG experience	Moderate / needs proof	Sabre publicly lists USCG among federal civilian customers; specific contracts, outcomes, recency, and reference availability are not public [21]
CGCYBER 24x7 operations	Gap	No public evidence located of Sabre leading a comparable CGCYBER SOC / DCO operation
100-200 cleared FTE mobilization	Gap	Capture estimate only; requires a quantified supply model and labor-capture partner
FFP operational economics	Gap / open	No PWS volumes, SLA regime, transition conditions, or shift model yet

Proof-pack workstream

PACKAGE	TARGET RELEVANCE	MINIMUM CONTENT
Past performance 1	24x7 / cyber operations / incident response	Contract, size, role, staffing, uptime, MTTR, customer rating, reference
Past performance 2	DoDIN / classified / platform cyber	NIPR/SIPR relevance, tool stack, control / risk outcomes, mission continuity
Past performance 3	Large integrated FFP service	Volume control, service levels, labor mix, transition, quality / cost outcomes
Corporate controls	CMMI / ISO / recruiting / security	Map each credential to a concrete performance control—not a logo wall
USCG credentials	Customer and mission access	Contract-level facts, outcomes, CPARS quotes if authorized, references, key personnel

STRATEGIC FIT

The opportunity is consistent with Sabre's post-acquisition growth posture: it is a large cyber / digital-engineering adjacency that can diversify beyond NAVAIR. Strategic fit alone is not a reason to prime. The gate must privilege proof, staffing, and fixed-price control over aspiration. [23]

Make / buy / partner

SABRE SHOULD OWN	PARTNER SHOULD PROVIDE	DO NOT INVENT
Program integration and mission outcomes	Current CGCYBER operations intimacy	An unidentified “incumbent”
Data / evidence fabric and automation	24x7 cleared SOC labor at scale	100-200 FTE as a fact
Platform cyber / systems engineering	USCG-specific tools, workflows, references	CSRMC authority over DHS systems
Workforce qualification and transition	OT / maritime specialist depth where PWS requires	Shipboard / JWICS scope without the PWS
Service control and continuous improvement	Targeted small-business depth and price leverage	A new JV this late

SECTION 10

Bid posture & teaming strategy

Default to a Sabre-led prime/sub team; use a MAS CTA only if eligibility or scope genuinely requires it.

POSTURE	WHEN	ADVANTAGE	RISK
A · Sabre prime + subcontractors	Recommended if Sabre is invited and can satisfy qualifications / past performance	Single accountability; clean program integration; Sabre controls proposal and price	Sabre must carry scale, FFP, and past-performance burden
B · MAS Contractor Team Arrangement	Use if multiple Schedule holders / SINs / qualifications are necessary	Combines complementary MAS scope; each member can perform under its Schedule	More agreement, pricing, privity, and order-administration complexity [5]
C · Strategic subcontractor	Fallback if Gate 0 or Gate 1 fails	Lower risk; preserve customer entry; focus on high-value differentiated lanes	Less account control and revenue; secure named workshare before team lock
D · New JV	Not recommended this late	Potential long-term strategic vehicle	Entity, vehicle, approvals, governance, and proposal timing are misaligned

Recommended team roles

PARTY	ROLE	VALUE	INITIAL WORKSHARE
Sabre	Prime / integrator	PMO, service control, data/evidence, platform cyber, workforce modernization, transition	35-45% target before PWS calibration
CGCYBER operations partner	Core sub	Day-one CuOps/FuOps workflows, key personnel, tool and branch intimacy	20-30%
Cleared workforce partner	Core sub	NCR recruiting, shift staffing, surge, retention, security processing	15-25%
OneOmega or equivalent	Partner / competitor	RMF / ConMon / USCG A&A; interface, IARMS boundary, incumbent references	10-20% if mutually beneficial
Maritime / OT + training specialist	Niche sub	Edge / vessel / port context, exercises, training design	5-10%, only to PWS need

Workshare principles

- Do not split the company or the ceiling evenly before the PWS. Allocate by task, proof, key personnel, and delivery accountability.
- Sabre must own the program's integrative center; otherwise it carries prime risk without controlling delivery.
- Offer exclusivity only for named key people, cited past performance, or a defined mission lane—not for a partner's entire capability catalog.
- Tie final workshare to proposal contributions, staffing commitments, rate competitiveness, and customer proof.
- Require disclosure of prime intent, existing exclusivities, OCI concerns, and IARMS scope conflicts before sharing sensitive capture material.

ONEOMEGA DECISION

OneOmega is the most obvious first call and the most dangerous assumption. Its current \$160M USCG IARMS win gives it access and relevant staff, but also a credible reason to prime. Run parallel paths: explore a bounded IARMS/evidence role while identifying an independent CGCYBER operations partner and an alternative RMF / A&A; specialist. [6][7]

SECTION 11

Solution thesis: Integrated Cyber Operations Fabric

A mission operating model that unifies branches, evidence, workforce, and service control without replacing government authority.

Design principles

PRINCIPLE	OPERATING MEANING
One mission rhythm	A single prioritized backlog and operational picture across CuOps, FuOps, DoDIN, and support—while preserving branch authorities.
Evidence once; consume many	Normalize telemetry, tickets, incident artifacts, control evidence, and decision logs so operations, ConMon, IARMS, and leadership reuse the same traceable facts.
Automate the repeatable	Automate triage, evidence collection, correlation, routing, and reporting; keep human judgment at decision and authorization points.
Train to mission qualification	Use task demonstrations, supervised repetitions, and readiness gates—not course completion alone—to qualify operators and transfer knowledge.
Design for contested / disconnected edges	Account for cutters, ports, classified networks, intermittent connectivity, and mission continuity where the PWS requires.
Control FFP with service data	Track demand, severity, backlog, shift coverage, rework, and surge so scope and capacity remain visible before service degrades.

Core artifacts

01	02	03	04
MISSION SERVICE CATALOG	EVIDENCE DATA MODEL	QUALIFICATION MATRIX	PERFORMANCE LEDGER

RACI boundary

ACTIVITY	IOM	IARMS / CGCC-AA	GOVERNMENT
Generate operational telemetry / incident evidence	R	C	A
Package reusable control evidence	R	C / R by task	A
Assess controls / SCA	C	R	A
Authorize / accept risk	I / C	C	A
Operational risk prioritization	R	C	A
Cyber response decisions	R / support	I	A

R = responsible support · A = government accountable authority · C = consulted · I = informed

SECTION 12

Workforce, transition & readiness

Treat staffing as an operational system: cleared supply, 24×7 relief, qualification, retention, and progressive transfer.

Headcount intelligence—use with caution

100-200 FTE

This range appears only in meeting notes. It is plausible for a >\$100M five-year cyber-operations buy, but value and FTE cannot both be treated as precise. A 100-FTE team at a \$210K annual fully burdened price consumes roughly \$105M over five years before many ODCs; 200 FTE consumes roughly \$210M. Validate average annual FTE, shift coverage, options, surge, and government-furnished support.

Illustrative five-year labor envelope (\$M)

AVERAGE FTE	\$180K / FTE-YR	\$210K / FTE-YR	\$240K / FTE-YR
100	\$90	\$105	\$120
150	\$135	\$157.5	\$180
200	\$180	\$210	\$240

Illustrative only; loaded-price treatment of fee, escalation, ODCs, travel, overtime, and subcontractor handling varies.

24×7 relief-factor rule

4.5-5.0	45-50	≥90%
FTE PER CONTINUOUSLY STAFFED SEAT	FTE FOR TEN 24×7 SEATS	TARGET SHIFT FILL / BACKUP COVERAGE

The exact relief factor must include leave, training, holidays, turnover, security processing, surge, and certification time.

30 / 60 / 90-day transition

PHASE	ACTION	EXIT TEST
Pre-award / Day 0	Capture critical incumbents; validate clearances; map tools/data; name shift leads; execute continuity rehearsals	Key-person acceptance; ≥80% conditional offers for critical billets
Days 1-30	Shadow / reverse-shadow; establish service baseline; freeze uncontrolled process changes; secure evidence / access	No missed watch; complete asset, queue, SLA, and risk baseline
Days 31-60	Assume service ownership by lane; automate high-volume handoffs; close knowledge gaps; qualify backups	Backlog stable or falling; all critical roles dual-covered
Days 61-90	Optimize demand / staffing; retire duplicate reports; launch continuous-improvement cadence	Government-accepted steady state; validated service and workforce dashboard

Workforce metrics

- Time to clearance / access; time to mission qualification; first-pass qualification rate; coverage by critical task.
- Shift fill, turnover, regrettable attrition, vacancy days, overtime, backup depth, and time to replace.
- Uniformed hours returned; task proficiency retained by government members; contractor-to-uniformed coaching ratio.
- Training-to-mission conversion: percentage of trained members who demonstrate the target task within 30 / 60 days.

SECTION 13

Fixed-price economics & risk control

Do not price headcount against a vague scope. Price a controlled service model with transparent volume, mix, and assumptions.

Top commercial risks

RISK	READ	CONTROL
Unknown work volume / severity	High	Baseline tickets, incidents, scans, exercises, reports, systems, and shift demand; price volume bands or explicit assumptions
24x7 and surge	High	Relief-factor model, on-call vs staffed-seat clarity, surge bands, premium-time treatment, minimum backup depth
Clearance / access delay	High	Conditional-offer pipeline, cross-trained bench, phased start, government delay assumptions, access dependency log
Incumbent transition	High	Staff capture, reverse-shadow, knowledge artifacts, data/tool access, transition CLIN or explicit phase
Tool / license / GFE uncertainty	Med-High	Responsibility matrix, interface inventory, license assumptions, government-furnished environment schedule
Scope boundary / IARMS	Medium	RACI, evidence interface, task acceptance criteria, change-control path
Wage / escalation	Medium	NCR compensation study, GSA ceiling / discount alignment, escalation logic, retention reserve

Price-to-win workplan

STEP	OUTPUT
1. Demand model	Work units by branch, severity, hours, locations, networks, and surge
2. Staffing model	Productive hours, relief, management span, certifications, clearances, attrition, training
3. Rate model	GSA ceiling, expected discount, teammate rates, mix, escalation, fee, ODCs
4. Competitor model	Incumbent retention cost, Tier-1 overhead, small-business rate advantage, likely automation claims
5. Risk corridor	Should-cost, target, walk-away; identify assumptions that change each by >2%

DO NOT ANCHOR AT \$100M

APFS says only “over \$100M.” It is neither a ceiling nor a government estimate that can safely anchor price. The staffing note could imply a materially larger value. Build the model from workload and labor mix, then reconcile it to the solicitation ceiling and evaluation method. [1]

SECTION 14

Win themes & discriminators

Each theme pairs a customer problem, a Sabre promise, and a proof requirement. No generic “innovation” language.

#	THEME	CUSTOMER TENSION	PROMISE	PROOF
1	More minutes on mission	Manual reporting, fragmented queues, uniformed time consumed by repeatable work	Automate evidence and reporting; measure uniformed hours returned and decision-cycle time	Data / automation outcomes; service baseline
2	One command rhythm	CuOps, FuOps, DoDIN, and support operate through separate priorities and artifacts	Integrated backlog, battle rhythm, surge model, and mission picture with branch authority intact	Comparable integration program; named mission lead
3	Evidence at operational speed	RMF / ConMon artifacts lag live operations; duplicated evidence work	Capture once, normalize, trace, and reuse evidence across ops, IARMS, and authorization	Prototype data model; IARMS RACI; automation metrics
4	A workforce multiplier	Recruiting, qualification, and retention cannot be solved by seat filling	Mission qualification, coaching, dual coverage, and progressive transfer to uniformed / civilian personnel	Qualification framework; retention outcomes
5	Maritime-aware defense	Enterprise and classified networks support distributed, mobile, and edge missions	Platform-cyber rigor and edge-aware operations that survive intermittent and contested conditions	NAVAIR / platform cyber proof; OT partner where required
6	FFP without hidden fragility	Low price can conceal vacancy, surge, and backlog risk	Transparent service catalog, demand ledger, relief factors, and early-warning capacity controls	FFP service outcomes; price assumptions traceability

Primary discriminator

MISSION CAPACITY LEDGER

A governed performance model that links demand, staffing, qualification, automation, backlog, operational risk, and mission time. It makes FFP capacity visible to both contractor and government—before queues, turnover, or surge become mission failures. This is more defensible than a tool dashboard because it connects delivery data to decisions and workforce readiness.

Candidate measures

OUTCOME	MEASURES
Mission speed	Detect-to-decision; MTTA / MTTR by severity; incident containment; decision-log age
Risk reduction	Repeat incident rate; KEV exposure age; control-evidence freshness; accepted-risk aging
Capacity	Backlog age; planned / unplanned ratio; demand vs staffed capacity; surge activation time
Workforce	Time-to-qualify; shift coverage; dual coverage; attrition; uniformed hours returned
Automation	% evidence auto-generated; manual touches per case; report cycle time; false-positive rework
Transition	% critical knowledge captured; access completion; retained key staff; missed-watch / service dip

Baseline the first 30 days, then propose improvement bands. Never promise arbitrary percentage gains without customer data.

SECTION 15

10-day capture sprint

The note says teams may lock in roughly a week and a half. Run the sprint now and preserve a clean pivot point.

DAY	WORKSTREAM	ACTION	OUTPUT
0-1	Eligibility & control	Name opportunity owner, capture lead, solution lead, pricing lead; check eBuy; confirm exact SIN; obtain APFS history; open assumptions log	Gate-ready vehicle / schedule brief
1-2	Customer & acquisition	Official POC questions; compliant mission discovery; validate branch pain, outcomes, transition, and IARMS boundary	Voice-of-customer matrix
1-3	Teaming	Call OneOmega / alternatives; identify CGCYBER ops incumbent(s); test prime intent, exclusivity, OCI, workshare, and key staff	Two viable team shapes
2-4	Workforce	Build 100 / 150 / 200 FTE model; 24×7 seats; clearance/cert mix; NCR supply; compensation; incumbent-capture list	Staffing feasibility and risk
3-5	Solution	Draft operating model, RACI, transition, workforce academy, evidence fabric, metrics, and automation backlog	Solution storyboard v1
4-6	Price-to-win	Build demand / mix assumptions, GSA rate model, competitor archetypes, should-cost / target / walk-away	PTW corridor v1
5-7	Team lock	Negotiate task-based workshare, key-person exclusivity, proposal duties, rates, references, and governance	Signed term sheets / LOIs
7-9	Reviews	Black hat, solution review, staffing stress test, transition rehearsal, FFP risk review	Closed critical gaps
10	Gate 1	Prime / sub / no-bid decision; approve investment and proposal readiness plan	Executive decision

First 72 hours — named decisions

OWNER	QUESTION	DECISION
Contracts	Can Sabre see / bid the RFQ under the exact SIN and HACS subgroup?	Yes / route to CTA / stop
Capture	Is there a current CGCYBER operations partner willing to commit?	Partner A / Partner B / sub posture
Delivery / HR	Can the team credibly cover critical shifts and clearances?	Feasible / conditional / not feasible
Operations	Which two past performances survive evaluator scrutiny?	Named references / gap
Finance	What cash, recruiting, and transition exposure does FFP create?	Risk corridor / walk-away

Customer-discovery prompts

- Which decisions are slow because data, branch handoffs, or evidence are fragmented?
- What operational work consumes uniformed time that a contractor should absorb or automate?
- Where does current performance break under surge, turnover, or after-hours incidents?
- What would make transition unacceptable on day one? Which people, tools, and routines are mission critical?
- How should IOM interface with IARMS, CGCC-AA, C5ISC, and technology-readiness initiatives?

SECTION 16

Gate plan, red flags & bid decision

A disciplined pursue decision protects the team from becoming trapped in a late, under-shaped prime bid.

GATE	PASS CONDITIONS	THRESHOLD	ACTION
Gate 0 · 72 hours	RFQ path / SIN confirmed; two relevant PP candidates; one CG ops partner; credible staffing lead; official schedule checked	All five	Pursue prime
Gate 0 failure	One or more fundamental eligibility / proof / staffing elements absent	Any critical miss	Pivot to strategic sub or stop
Gate 1 · Day 10	Team locked; task workshare; named leaders; 70% critical-role coverage; solution v1; PTW corridor; transition / FFP risk accepted	Executive approval	Fund proposal
RFQ + 72 hours	Scope, evaluation, clearances, SLAs, ceiling, and order terms align to team and price assumptions	No fatal mismatch	Final bid / no-bid

Red flags that force a sub pivot

- Sabre is not in the eBuy invited pool and cannot cure the issue through an acceptable team structure.
- No relevant prime past performance can withstand size / scope / complexity comparison.
- The team cannot credibly mobilize critical cleared roles before award / transition.
- A partner controls the customer, key people, and majority work while Sabre retains FFP accountability.
- The PWS transfers uncontrolled incident, surge, or tool risk without pricing or assumption relief.
- IARMS / other contract boundaries create unmanageable OCI or a materially hollow Sabre scope.

Recommended executive decision

PURSUE PRIME	WITH CONDITIONS	PIVOT EARLY
Vehicle + strategic fit	72-hour proof gate	If proof or scale fails

INVESTMENT POSTURE

Authorize a small, senior 10-day capture cell immediately—not a full proposal surge. Release major spend only after Gate 0. This preserves speed while keeping Sabre from underwriting an unverified 100–200 FTE FFP program with insufficient customer and workforce proof.

Next executive review

Gate 0 pack: one page each for eligibility, customer, competition, team, past performance, staffing, and financial exposure—plus an explicit prime / sub decision.

SECTION 17

Capture question bank

Resolve these in the PWS, Q&A; customer discovery, and partner diligence. Each answer changes solution, staffing, or price.

DOMAIN	QUESTION
Acquisition	What exact SIN(s) / HACS subgroups apply? Is eBuy the only release channel? What is the actual RFQ number? Is a CTA permitted?
Schedule	Is 23 September stable? What are quote due date, award date, transition start, base/options, and incumbent bridge?
Scope	Which branches and divisions are funded? Does scope include CGCC-37, CGCC-AA, MTS/OT, JWICS, exercises, or shipboard work?
Volumes	How many systems, users, sites, shifts, incidents, hunts, tickets, assessments, exercises, reports, and surge events?
Service levels	What are severity definitions, response / restore targets, uptime, reporting, backlog, staffing, and key-person requirements?
Tools / data	Which SIEM, SOAR, EDR, vulnerability, ticketing, case, asset, data, and collaboration platforms are government furnished?
Networks	What work occurs on NIPRNET, SIPRNET, DoDIN, JWICS, cloud, endpoints, OT, cutters, or disconnected edge?
Clearances	What facility clearance, individual clearance, SCI, polygraph, access, 8140 / DCWF, certification, or citizenship requirements apply?
Workforce	Is 100–200 FTE accurate? Average or peak? Government / contractor mix? Onsite / remote? Which positions are 24×7?
Transition	Who performs each legacy task? Which people, data, runbooks, licenses, and queues must transfer? What constitutes no-loss transition?
IARMS boundary	Who owns ISSO, ISSE, SCA, compliance, ConMon, evidence packaging, control remediation, and incident artifacts?
Authority	How do DHS 4300A, NIST RMF, DoD / USCG policy, CSRMC, reciprocity, and AO decisions apply to covered systems?
Price	What ceiling, funding profile, CLIN structure, escalation, travel / ODC treatment, surge mechanism, and GSA discount method apply?
Evaluation	What are factors, relative importance, page limits, oral / demo elements, past-performance recency / size thresholds, and staffing commitments?
Small business	What subcontracting goals, reporting, mentor-protégé / JV limitations, and socioeconomic evaluation credits apply?
Legacy performance	What specifically is unsatisfactory—service levels, vacancies, speed, integration, training, innovation, reporting, or cost—and what evidence supports it?
Outcomes	Which command outcomes matter most: mission time, readiness, risk, response speed, backlog, workforce qualification, or transition continuity?

Partner diligence — minimum before exclusivity

CHECK	EVIDENCE
Prime intent / exclusivity	Written disclosure of teams, named exclusive people / references, conflicts
Past performance	Contract facts, role, size, recency, outcomes, reference permission, CPARS availability
Staffing	Named key people, incumbent relationships, cleared bench, recruiting metrics, compensation
Rates	Applicable Schedule / subcontract rates, discounts, escalation, fee / handling assumptions
Delivery	Task ownership, RACI, quality, reporting, service measures, transition commitments
Risk	OCI, IARMS or other scope conflicts, IP / data, noncompete, organizational restrictions

SECTION 18

Handwritten note reconciliation

The source note was useful, but several items required correction or careful confidence labels.

NOTE ITEM	NORMALIZED INTERPRETATION	STATUS
“\$100M / 5 year / full & open”	APFS says >\$100M, no set-aside, GSA Schedule, completion 3 Jan 2032. Exact base/options are unknown. “Open” means the eligible MAS pool.	Mostly verified [1]
“RFP end of Sept”	APFS forecast solicitation date is 23 Sep 2026. On MAS, an RFQ via eBay is more likely than an open-market RFP.	Verified / terminology corrected [1]
“100–200 FTE”	No public confirmation found. Parametrically plausible but economically material.	Meeting intelligence
“6–7 Tier 1 competition”	Read as six to seven—not sixty-seven. No public bidder list exists.	Meeting intelligence
“GDIT, MetTel, Booz, CACI”	Plausible black-hat candidates; none is publicly confirmed as a bidder.	Meeting intelligence
“Two members / a JV / OneOmega”	OneOmega is the Alpha Omega / OneZero Solutions JV and won the \$160M IARMS contract.	Verified [6][7]
“ISSO / ISSE / RMF / ConMon”	Directly maps to adjacent IARMS services; not proof that IOM includes those tasks.	Adjacent scope verified
“Incumbent is failing”	IOM is formally a new requirement. Performance dissatisfaction may concern legacy branch contracts; contract and evidence unknown.	Unverified; do not repeat externally
“1,200 uniformed cyber staff”	Most likely 1,200 active-duty Marine Science Technicians being trained to recognize cyber issues—not CGCYBER operators.	Corrected [15]
“CG2030 document”	Likely Ready Workforce 2030, which emphasizes recruiting, retention, training modernization, and member support.	Likely match [14]
“Brian Campo — former Sabre”	Current USCG Director of Technology Readiness / CDAO; public sources confirm prior Sabre VP role.	Verified [24][25]
“CAPT Boris — director of operations”	CAPT Boris Montatsky is publicly identified as CGCYBER Director of Operations.	Corroborated [26]
“Week and a half until team is final”	Treat as a capture deadline, not a government deadline. It drives the 10-day sprint.	Meeting intelligence

NAMES AND ILLEGIBLE FRAGMENTS

Several handwritten names and short phrases could not be read with reliable confidence. They are intentionally excluded from the stakeholder record. Validate them with the note author before entering contacts, competitor claims, or teaming commitments into CRM.

Evidence-handling rule

Only primary-source facts should appear as factual statements in executive and proposal materials. Meeting intelligence belongs in the capture assumptions log with a source, date, confidence, owner, and validation action. Analytic inferences should be stated as hypotheses and retired when the solicitation resolves them.

SECTION 19

Sources & research notes

Primary government and company sources are prioritized. All links were checked during research on 1 September 2026.
