

Request for Information (RFI) for a Family of Affordable Mass Missiles – Beyond Adversary’s Reach (FAMM-BAR)

ISSUING OFFICE:

Weapons Capacity Branch EBIW
Eglin Air Force Base, FL

DATE OF ISSUANCE:

17 April 2026

RESPONSE DUE DATE:

29 April 2026

SUBJECT: Request for Information (RFI) Regarding a Beyond Adversary’s Reach, Family of Affordable Mass Missiles (FAMM-BAR)

1.0 PURPOSE

The Portfolio Acquisition Executive for Weapons (PAE-W) is conducting market research to identify potential sources with the capabilities to design, develop, and manufacture an adaptable and affordable Family of Affordable Mass Missiles (FAMM). This RFI is issued to gather information from industry on their abilities to perform these tasks in an affordable and expedited manner.

2.0 BACKGROUND INFORMATION

The Air Force Life Cycle Management Center, Armament Directorate, Adaptive Weapons Division, Weapons Capacity Task Force (EBIW), Eglin AFB, FL issues this RFI to help determine the technical capability and qualifications of industry to meet a need to produce FAMM-BAR for the Government and Foreign Military Sales. The potential procurement objective is to produce an inventory for the Government and Foreign Military Sales. The expectation is that the annual production orders will range from 1000 – 2000 units per year for 5 years (procurement numbers will vary by year).

The program office seeks to streamline the battlespace by developing a single, common, air-to-surface munition that is affordable, adaptable, and possesses significant standoff range. The core concept is a singular design that allows for the primary deployment method via Palletized: For long-range strike from cargo aircraft. The Government is also presenting trade space for a secondary deployment method from the same singular design via Lugged: For long-range employment on fighter and additional aircraft.

The program office requests more information on your current design and if it includes the ability for the munition to be delivered from air to surface, and surface to surface by Army and Navy systems. This is not a request to change your current design to satisfy other services and strictly for information gathering nor is it a demand signal from the other services.

3.0 REQUESTED INFORMATION

All respondents must have the necessary organizational and technical experience, or the ability to obtain them in the necessary timeframe. Competence in these areas shall be demonstrated through written description of the vendors' past and/or current capability as well as currently supported program offices. The respondents interested in producing the FAMM-BAR should be able to complete a qualification program and produce the warheads in the expedited time frame. Respondents should tailor their responses based on their proposed team or company strategy. Citing prior experience relating to the questions will aid in the Government assessment of industry capability.

Describe your proposed solution to meet the following performance attributes. Your response should detail how your design will meet these requirements.

ATTRIBUTE	Requirement
Range	≥ 1000 NM
Speed	$\geq .7$ M
Deployment method	Palletized via cargo aircraft
Target Set	Slow moving maritime
Mid-course navigation	Yes
Manufacturing Rate Per Vendor	$\geq 1,000$ AUR per year

Respondents are requested to provide the following information. Please discuss your design philosophy and the trade-offs your company envisions to balance the following factors:

- a. Modularity: How will your design adapt between lugged and palletized configurations? Describe the kits or components required for conversion.
- b. Modularity: How does your design adapt between the three services in regard to air, ground and maritime configurations?
- c. Agreement Strategy: Must meet the criteria to be awarded an Other Transaction Authority Agreement (10 U.S.C. § 4022).
- d. Unitary lugged/palletized vs non-unitary: Are there any significant cost or performance risks associated with a unitary system?
- e. Aerodynamics & Size: How will you manage the aerodynamic and physical constraints for a weapon that must be both internally/externally lug mounted by fighters/bombers and deployed from a cargo pallet or for maritime operations on USN ships?

- f. Cost vs. Capability: What is your strategy for achieving the full range of aircraft integration and performance targets while remaining within the program's affordability goals?
- g. Affordability: With the package you are presenting what do expect the Fly-Away Cost at 1000 units to be? Keeping in mind this is part of the Family of Affordable Mass Missiles. Include your top 5 cost drivers.
- h. What will the specification for the recommended munition size be?
- i. What/how will you integrate the pallet (Such as the Deployment Assembly Subsystem (DAS)) 2.1 and/or vendor proposed solution? What is the loadout for vendor solution and how far out is it from it being integrated.
- j. Navigation, flight profile, and terminal attack logic within GNSS-denied environments.
- k. How will you approach the Networked Collaborative Autonomous (NCA) requirement?
- l. How will your design adhere to the use of the Weapons Open System Architecture (WOSA) Standard?
- m. Requesting information regarding leverage of existing/developing programs to assist in affordability, manufacturability, and showing maturity.
- n. Describe your company's manufacturing approach to a modular system and how you would achieve the specified production rates in various increments through the objective of 2000.
- o. Provide a Rough Order of Magnitude (ROM) cost estimate for the development and production of the flyaway cost. Identify a proposed production schedule and quantity bands with associated production costs and per warhead case costs.
- p. Provide a list of your top three long lead item concerns.
- q. Describe your approach in designing for Reliability, Availability, and Maintainability (RAM), to include project shelf life, operational reliability numbers, and maintenance philosophies.
- r. Provide a description of your proposed sparing concept and supply chain management plan for the life of the system.
- s. How will the system report its health status on the aircraft, in storage, or on a pallet?

- t. What is the system's ability to support a Prognostics and Health Management (PHM) strategy to optimize the maintenance lifecycle and reduce costs.
- u. Provide any peculiar support equipment (SE) required to support the weapon system through its life cycle.
- v. Provide an outline of your proposed approach to developing a complete TDP and the willingness to provide Government Purpose Rights.

4.0 SECURITY

The anticipated security level for this Agreement will be UNCLASSIFIED. Highlight any work in which your organization may be classified above this level, and the ability to handle and store at those levels within your response.

5.0 SUBMISSION INSTRUCTIONS

Respondents to this RFI should adhere to the following details. Interested parties are requested to respond with a white paper in the following format: Microsoft Word compatible; 10 pages or less (including cover and administrative pages); 1-inch margins; and 12-point font (or larger).

Interested parties should provide a company profile to include the following:

- a. Company Name
- b. Company Address
- c. Point of Contact
- d. E-mail Address
- e. Website Address
- f. Telephone Number
- g. Business Category as it relates to the North American Industry Classification System (NAICS) code 332993 numbers of employees
- h. DUNS number / CAGE Code

Interested sources should submit their information via email only. Please include "RFI Response: FAMM-BAR" in the subject line and reply no later than 1700 hrs on 29 April 2026 to the following email AFLCMC.EBIW.Contracting@us.af.mil. All submittals should be UNCLASSIFIED. Any questions should be emailed to the same personnel mentioned above. This RFI is for information and planning purposes only and does not constitute a Request for Proposal (RFP). It is not to be construed as a commitment by the US Government. The Government reserves the right to reject, in whole or in part, any private sector input as a result of this market survey. The Government is not obligated to notify respondents of the result of this survey. Proprietary information, if any, must be clearly marked. To aid the Government in its review, please segregate proprietary information. Please be advised that all submissions become Government property and will not be returned.

6.0 DISCLAIMER

This is a Request for Information (RFI) notice only. This RFI is for informational planning purposes, and it is not to be construed as a commitment by the Government for any actual procurement of materials, machinery, or services. This notice does not constitute a solicitation or a promise of solicitation in the future. This RFI does not commit the Government to a contract for any supply or service. Respondents are advised that the Government will not pay for any information or administrative costs incurred in response to this RFI. All costs associated with responding to this RFI are solely at the responding parties' expense. Respondents are solely responsible for properly marking and clearly identifying any proprietary information or trade secrets contained within their response. The Government will not be liable for or suffer any consequential damages for any proprietary information not properly marked or clearly identified. Proprietary information received in response to this RFI will be safeguarded and handled in accordance with applicable Government regulations. Responses to this notice are not offers and will not be accepted by the Government to form a binding contract or agreement. The Government will not be obligated to pursue any particular alternative because of this RFI. Responses to the RFI will not be returned. Not responding to this RFI does not preclude participation in any future solicitation, if one is issued, but will be used to invite participants for one-on-one industry day appointments.
