

SPECIAL NOTICE: 34T BREAK BULK TRAILER ACQUISITION STRATEGY

1. THE MISSION NEED

GSA is releasing this Notice concerning its intended technical and procurement strategy for the upcoming 34T Stake Breakbulk Trailers requirement. The Purchase Description (PD), is attached to this Notice. Please pay specific attention to **ATTLA Air Transportability** and **Tractor Interface** requirements in the PD.

2. THE EVALUATION SHIFT (HTRP)

GSA is leveraging the flexibilities of the Revolutionary FAR Overhaul and is departing from the "Best Value Tradeoff" model. The basis for the award is intended to be **Highest Technically Rated with a Fair and Reasonable Price (HTRP)** (see RFO-2025-Part 15.103-3).

- **Technical is King:** We intend to rank proposals from "Best" to "Acceptable." The award goes to the #1 ranked technical firm, **provided their price is fair and reasonable.**
- **No Tradeoffs:** GSA will **not** be comparing a "good" trailer at a lower price against an "excellent" trailer at a higher price. GSA simply wants the **best technical solution that the market can reasonably justify in price.**

3. INTENDED NEW INSTRUCTIONS FOR QUOTES

When submitted, your quote must be "Decision Ready" upon submission:

- **Prove Capability:** Don't just promise to meet the PD; provide the drawings, weight estimates, and past ATTILA data requested in the PD.
- **Justify Price:** You will be requested to provide "prices paid" examples from commercial or open-market sales (non-MAS or non-Federal Supply Schedule procurements). This allows us to make an immediate "Fair and Reasonable" determination without lengthy back-and-forth.

- **4. SELF ASSESSMENT QUESTIONS**

In preparation for responding to the subsequent RFQ, please consider your ability to address the following critical areas:

1. Technical Precision & Compliance

- **How will your technical proposal go beyond "statement of intent" to provide demonstrable evidence (e.g., existing test data, CAD models, stress analysis) that your trailer meets the 34T Stake Breakbulk requirements?**
- **Can you provide documented evidence of previous ATTILA certifications for trailers of similar weight and dimension?**
- **How does your design specifically address the tractor interface clearances defined for the four specific Navy prime movers listed in the PD?**

2. Price Reasonableness

- **Do you have at least two recent (within 3 years) open-market or commercial sales of similar heavy-duty trailers to justify your proposed price?**
- **If your commercial sales differ in scope (e.g., lack the military paint or ATTILA engineering), can you provide a price bridge to explain the delta between those sales and this requirement?**
- **Are you prepared to submit this data as "Data Other Than Certified Cost or Pricing Data" immediately upon request?**

3. Supply Chain & Supportability

- **How do you manage your spare parts data? Are you prepared to provide a comprehensive parts library or Illustrated Parts Breakdown (IPB) that aligns with Navy supportability goals?**
- **What is your current production lead time, and how will you ensure delivery meets our urgent timeline despite current global supply chain fluctuations for steel and specialized axles?**

4. Risk Mitigation

- **What do you identify as the highest technical risk in this PD, and what specific engineering steps have you taken in your design to mitigate it?**
- **Given that this is an HTRP selection, what "Technical Strengths" (e.g., superior corrosion resistance, enhanced load securement, or digital twin modeling) does your firm offer that would justify ranking you as the #1 technically rated offeror?**
