

Single Source Justification (Simplified Acquisition)

Section A: General Contract Information

Contracting Activity: 502d Contracting Squadron JB-SA-Randolph, TX

Project/Program Name: Phillips Corp Maintenance

Purchase Request/Identification Number: F3P3BD6056AQ01

Estimated Contract Cost (including Options): [REDACTED] (BY + OPY4)

Section B: Description of the Supplies/Services Required

The 502d Trainer Development Squadron (TDS) on Joint Base San Antonio – Randolph, designs, develops, manufacturers, and maintains training devices and simulators for the entire Department of War (DoW) community. The machines to be serviced are a critical component in TDS's unique and highly specialized mission to create the simulated training devices used by flying, fighting, air mobility, technical, and aeromedical training operations throughout the Air Education Training Command (AETC), United States Air Force (USAF), DOW, and by partnered Allied Nations through Foreign Military Sales (FMS). For these project efforts and for over 20 years, the 502 TDS has utilized numerous Haas machines from Phillips Corp, including over 6 Haas Vertical Machining Centers and a large true 5-axis CNC milling machine specifically for the fabrication of aircraft-sized and exact aircraft-replicas for trainers. Under the contemplated contract, Phillips will provide five years (base + four ordering periods) of annual Performance Assurance (preventive maintenance) with Comprehensive Calibration Analysis, Reactive Services (unscheduled maintenance/repair) and Replacement Parts as needed for eight Haas machines (six Mills and two Lathes) and two Trunnion Rotary Table attachments. Factory-trained and approved technicians will conduct all the major maintenance checks recommended by Haas to include Vibration Analysis, Drawbar Force Test, Geometry Inspection, and Renishaw Ball Bar Test.

Section C: Justification for Soliciting from a Single Source or Brand Name

Phillips Corporation (Phillips) is the sole and exclusive distributor of Haas CNC Machine tools, and any associated factory certified service maintenance agreements, training, and applications work for US Government facilities. Since the 502 TDS is already pure fleeted with the Haas Vertical Machining Centers and had separate warranty contracts for its existing Haas equipment, TDS would incur additional costs in training and in the purchase of new tooling, accessories, and software which would be required if other brands of machines were purchased. TDS estimates that approximately \$[REDACTED]K would be required for additional training while also experiencing diminished productivity during the learning period, and that \$[REDACTED]K would be required in additional tooling, accessories, software, and after-warranty maintenance. Over the course of its lifetime, buying another branded machine would cost more than \$[REDACTED]K to \$[REDACTED]K in expenses, not including the initial cost of the equipment. Purchasing and installing another vertical machining center via another manufacturer would not be in the best interest of the Government, both financially and performance-wise. Due to the number of Haas Vertical Machining Centers that TDS utilizes and the inability to replace all with another brand, the TDS requires the continued utilization of Phillips Corp to perform the maintenance and assurance for these machines. Phillips Corps was and remains the only company available to perform these required functions.

Section D: Efforts to Obtain Competition

Market research was performed; however, Phillips does not maintain a network of other authorized service providers within the regional area capable of providing the required annual maintenance and repair services. All service technicians are employed by Phillips and certified by Haas automation. This preserves warranty terms, ensures the reliability and functionality of the equipment by certifying only those personnel who have been expertly trained in specific machine intricacies, and more importantly, secures the safety of the personnel responsible for operating the machines.

Section E: Steps to Preclude Future Single Source or Brand Name Awards

Until other manufacturers can provide equipment that is compatible with the 502 TDS' existing system, including maintenance and upgrades that meet the Government's needs, it would be neither reasonable nor feasible to consider any other brand. The 502 TDS will continue to evaluate the capabilities of the other manufacturers through continuing market research and the changing needs of the current system. Continued efforts in this regard will ensure that the Government is getting the best value at a fair and reasonable price by ensuring the Government utilizes the most efficient and economical components and support. Of final note, and as stated above, Phillips still remains the sole and exclusive distributor of Haas CNC Machine Tools and associated factory certified service and training. Reference attached letter from Haas Automation, Inc.

Section F: Technical Personnel Certification of Accuracy

The supporting data, which forms the basis of this justification, has been certified to be complete and accurate to the best of my knowledge and belief, and by the appropriate management level of my organization.

Date	Typed Name and Rank/Grade of Technical Personnel	Signature of Technical Personnel
02/20/2026	[REDACTED]	[REDACTED]

Section G: Contracting Officer's Determination

I have determined, in accordance with FAR13.106-1(b)(1), that the circumstances of this contract action deem only a single source is reasonably available.
