

STATEMENT OF WORK

Modification of 3-Dimensional Imaging Flash Lidar Camera

1.0 Introduction/Background: Service contract for modifying a government owned 3-Dimensional Imaging Flash Lidar Camera.

2.0 Scope of Work: Perform necessary work on a government owned 3-Dimensional Imaging Flash Lidar Camera, model GSFL-16K, for achieving the following upgrades:

1. Eliminate frame-to-frame (, or laser shot-to-shot) range hopping.
2. Incorporate a programable 4 km range gate that can extend the effective operational range to 70 km with an absolute range error of less than 1 m.

3.0 Objectives: Extend the operational range of an existing 3-Dimensional Imaging Flash Lidar Camera from 4 km to 70 km while eliminating the range hopping between the image frames.

4.0 Description of the Work/Contractor Tasks: The contractor shall modify the firmware and hardware required for simultaneously extending operational range to 70 km, eliminating shot-to-shot range hopping, and achieving an absolute range error of less than 1 m. The contractor shall conduct the necessary functional checkout tests to verify the camera's nominal operation over the extended range.

5.0 Deliverables: Modified government owned 3-Dimensional Imaging Flash Lidar Camera.
