

Single Source Justification (Simplified Acquisition)

Section A: General Contract Information

Is this a Bridge Action as defined in the [AF Bridge Action Reduction Plan](#)? ☐ Yes ☒ No

Contracting Activity: AFTC/PZIOAD

Project/Program Name: F-22 HOTAS Hardware

Purchase Request / Local ID Number: F1T0BW6042A001

Estimated Contract Cost (including Options): [REDACTED]

Section B: Description of the Supplies/Services Required

The 36th EWS SWD Flight already possesses a F-22 HOTAS hardware unit; however, mission demands have indicated that another unit needs to be purchased, the previous unit was purchased via [REDACTED]. Hands-On Throttle And Stick (HOTAS) is a control system that allows pilots to access critical aircraft functions without removing their hands from the flight controls. It consists of a joystick and a separate throttle unit, both of which have multiple buttons and switches. This setup provides a more realistic and immersive experience for flight simulation by mimicking the controls of a real fighter jet.

HOTAS ASSEMBLY - DESKTOP STICK - F22

QTY: 1

HOTAS ASSEMBLY - DESKTOP THROTTLE - F22

P/N: 20B120890-1001

QTY: 1

Section C: Justification for Soliciting from a Single Source or Brand Name

The F-22 HOTAS hardware unit produced by [REDACTED] is the only model approved for the program's Authority to Operate (ATO) for entry/use in Room 303K. Therefore, procuring a F-22 HOTAS hardware unit from [REDACTED] is the recommended COA for acquiring this item. [REDACTED] is the only SAM registered company manufacturing military spec F-22 Hands on Throttle and Stick hardware. This hardware is needed for the 36th Electronic Warfare Squadron Virtual Air Combat Simulator (VACS) which runs realistic F-22 scenarios and aids in providing risk reduction for our Phase Testing of F-22 Mission Data. Being that the VACS is meant to emulate realistic scenarios, it uses the "real" controls and buttons of the F-22. Currently, simulation movements are performed by clicking on representative aircraft controls on the computer monitor, which is inefficient in terms of time and precision, and lacks the ability to provide multiple aircraft inputs simultaneously. The solution to this problem is acquiring a representative Hands-On Throttle And Stick (HOTAS) hardware unit. This will enable users to input aircraft movements and commands with high precision and zero latency, mimicking the experience of an actual F-22 pilot. Failure to procure this item may result in diminishing USAF capability to dominate the electromagnetic spectrum and provide a multitude of airframes with the ability to use the electromagnetic spectrum to their advantage.

Section D: Efforts to Obtain Competition

Market research indicated that 1 vendor actively registered on SAM could provide the requested item indicating that a single source purchase request is needed.

Single Source Justification (Simplified Acquisition)

Section E: Steps to Preclude Future Single Source or Brand Name Awards

Contracting will conduct updated market research if this requirement is needed in the future to see if other SAM.gov vendors have entered the market and are able to supply the HOTAS. If it appears another vendor can provide the HOTAS in the future, Contracting will attempt to compete this requirement. Additionally, Contracting will re-verify with the end user that Bugeye Technology is still the only model approved for the program's Authority to Operate (ATO).

Section F: Contracting Officer's Determination

I have determined, in accordance with [FAR 13.106-1\(b\)\(1\)](#), that the circumstances of this contract action deem only a single source is reasonably available.
