

Soldier Touchpoint (STP) – Operational Effectiveness

All test methods and quantities are approximations and are subject to change.

Participants Required. Up to 15 Users.

Hardware. Participants may be outfitted with combat helmet, eye protection, gloves, hearing protection, body armor with plates, and ammunition.

Approximate Ammunition Resources (Per Vendor):

Users	TP Rounds (Per User)	CQB Rounds (Per User)	CD Rounds (Per User)	CUAS Rounds (Per User)
10	54	54	36	54

Procedure.

- 1) Overview and Training of Equipment: Government personnel will provide initial remarks to participants explaining the need for the capability increase and what it entails. Users will then transition to New Equipment Training (NET) for the weapon system. NET will be conducted by government personnel who have participated in the Instructor & Key Personnel Training (I&KPT). NET will consist of non-live fire instruction for basic weapon handling and usage instructions.
- 2) Overview and Training of Procedures: Government personnel will provide explanation to participants pertaining to what they will be expected to do and the types of targets they will be searching for and engaging during the test.
- 3) Once the participants have met the basic criteria to serve in this effort and have been briefed on the test activity, they will proceed with range familiarization with course of fire prior to engaging in live fire (e.g., dry fire).
- 4) All weapons will be zeroed. Zeroing will be conducted according to Vendor-specific procedures and ammunition availability.
- 5) Participants will engage targets located at various ranges, in varying levels of defilade, and from various firing postures. Live-fire tasks may be conducted in both Day and Night conditions. Tasks will be determined based on ammunition types.
- 6) Target acquisition and engagement data (metrics TBD based on task and ammunition type) will be recorded.
