

CONTROLLED UNCLASSIFIED INFORMATION

Justification and Approval (J&A) for Other Than Full and Open Competition

Was a J&A approved for the preceding acquisition where that acquisition required a J&A? ☐ Yes ☒ No

Is this a new or amended J&A Document? ☒ New ☐ Amended (Prior to Award Only!)

Is this a Bridge Action as defined at [DAFFARS 5302.101](#)? ☐ Yes ☒ No

Dollar Value of this Acquisition: [REDACTED]

Contracting Activity: Directorate of Contracting, AFTC/PZZF, Edwards AFB, CA

Purchase Request (if available) / Local ID Number: TBD

Program / Project (and PE, if applicable): NGDE-Applications Ansys AGI Enterprise License

Program Type (PEO, Enterprise, of Operational): Enterprise

Authority:

6.302-1 – 10 USC 3204(a)(1), Only One Responsible Source - No Other Supplies or Services Will Satisfy Agency Requirements

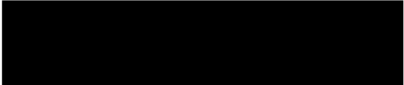

Estimated Contract Cost (including options): [REDACTED] J&A Type: ☐ Class ☒ Individual

COORDINATION ([DAFFARS 5306.304\(a\)](#))

Date 12 Aug 2025	Project Lead / Program Mgr / Requiring Activity [REDACTED]	Signature [REDACTED]
Date 08 Sep 2025	Contracting Officer Wendell W. Brown Jr. AFTC/PZZF / 661-277-8590	Signature [REDACTED]
Date 29 Sep 2025	Local Legal Reviewer [REDACTED]	Signature [REDACTED]
Date 20 Nov 2025	Chief of the Contracting Office (COCO) [REDACTED]	Signature [REDACTED]

Date 26 Nov 2025	Senior Contracting Official (SCO) [REDACTED]	Signature [REDACTED]

Justification and Approval (J&A) *for Other Than Full and Open Competition*

APPROVAL ([DAFFARS 5306.304\(a\)](#))

Date	AFTC Executive Director	Signature
17 Dec 2025		

Justification and Approval (J&A) for Other Than Full and Open Competition

I. Agency and Contracting Activity.

The contracting organization responsible for the proposed action is the Air Force Test Center (AFTC), Directorate of Contracting, AFTC/PZZF located at 5 South Wolfe Avenue, Edwards Air Force Base (AFB), CA 93524-1185. The contracting officer for the proposed action is Mr. Wendell Brown.

II. Nature and/or description of the action being approved.

The proposed action will result in a commercial, Firm-Fixed Price (FFP), Indefinite Delivery Indefinite Quantity (IDIQ) contract award to Ansys Government Initiatives, LLC (AGI), a large business concern:

220 Valley Creek BLVD
Exton, Pennsylvania
19341-2380, United States
UEID: XQLLG2X727C4
CAGE: 0LCT6

This contract is for AGI software licenses and ancillary engineering services for Edwards AFB and other AFTC locations.

III. Description of supplies/services required to meet agency needs.

The AFTC requires the continued provision of advanced modeling, simulation, and analysis (MS&A) software, comprehensive maintenance, and engineering services. This requirement is paramount to enhancing AFTC's core test and evaluation capabilities for complex weapon systems and ensuring seamless operational continuity within its legacy, comprehensive AGI software environment. This acquisition addresses the growing imperative to leverage proven, physics-based simulation technology to optimize test processes, mitigate strain on physical test infrastructure, accelerate development timelines, enhance security for sensitive programs, and ensure direct correlation with digital engineering models.

The following specific supplies and services are required:

1. CLIN 0001 AGI Software and Ancillary Supplies: This requirement includes the provision of AGI software licenses, core and modules, and technical data. In accordance with DFARS The Government shall receive Government Purpose Rights (GPR), which is the Government's right to (1) Use, modify, reproduce, release, perform, display, or disclose computer software or computer software documentation within the Government without restriction; and, (2) Release or disclose computer software or computer software documentation outside the Government and authorize persons to whom release or disclosure has been made to use, modify, reproduce, release, perform, display, or disclose the software or documentation for United States government purposes.
2. CLIN 0002 Engineering Services: Expert subject matter support, critical for AFTC scientists and engineers to effectively utilize the highly complex AGI software.
3. CLIN 0003 Software Maintenance: Required manufacturer-direct software maintenance and updates, including all core software and modules, security patches, and functional enhancements.
4. CLIN 0004 Training: Comprehensive online learning hub containing a robust knowledge base, tutorials, best

Justification and Approval (J&A) for Other Than Full and Open Competition

practices, and other resources.

IV. Demonstration that the contractor's unique qualifications or the nature of the acquisition requires use of the authority cited above.

Authority Cited: 10 U.S.C. 3204(a)(1) - Only one responsible source and no other supplies or services will satisfy agency requirements, as implemented by FAR 6.302-1.

AGI is uniquely positioned to fulfill the Air Force Test Center's (AFTC) requirements for advanced modeling, simulation, and analysis (MS&A) software, comprehensive maintenance as its software and intellectual property are proprietary to AGI. The combination of AGI's proprietary technology, deep integration within legacy system configurations at AFTC, ensure modularity and mitigates duplicative cost, and, schedule and performance risks. No other commercial vendor can offer the precise functionalities and integrated capabilities inherent to the AGI suite of tools (proprietary source code) which are essential for AFTC's unique mission sets.

AGI software and ancillary engineering services currently support high-priority Air Force platforms:

a. Legacy Platforms: [REDACTED]

b. Next-Generation Platforms: Expected future use on [REDACTED]

c. Weapon Systems: [REDACTED]

In accordance with FAR 6.302-1(a)(2)(ii), supplies may be deemed to be available only from the original source in the case of a follow-on contract for the continued development or production of a major system or highly specialized equipment, including major components thereof, when it is likely that award to any other source would result in substantial duplication of cost to the Government that is not expected to be recovered through competition; or, unacceptable delays in fulfilling the agency's requirements.

Transitioning to new software platforms would require duplication of highly sophisticated technical capabilities, proprietary algorithms, and datasets, followed by comprehensive verification and validation processes, creating significant project delays and generating redundant expenses that cannot be offset by competitive advantages.

The AFTC workforce has cultivated deep expertise in AGI software over many years, representing a valuable investment in specialized knowledge, and implementing new software would require extensive staff retraining, redirect essential personnel from active missions, and create challenging adaptation periods that would delay operations, diminish testing precision, and compromise critical mission effectiveness during the changeover—consequences that are incompatible with AFTC's essential testing mandate and rigid scheduling requirements.

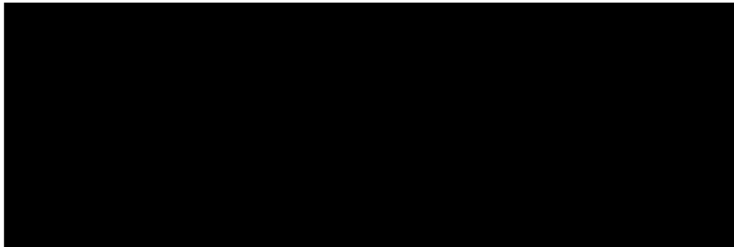

Adopting alternative software would fundamentally undermine the Air Force's priority of expediting capability assessments and would seriously obstruct [REDACTED] via testing and evaluation, as simulation development and digital modeling tools are fundamental to this strategic initiative and mandated software changes would create substantial barriers to accomplishing this essential mission.

Therefore, utilizing AGI products and services is essential for maintaining AFTC's mission effectiveness, preventing unacceptable operational delays, avoiding substantial and unrecoverable costs, and mitigating the significant risks associated with an unproven transition from a deeply integrated, mission-critical simulation environment.

According to AFTC Subject Matter Experts (SMEs), an other than requested (OTR) solution would need to be recreated in

Justification and Approval (J&A) for Other Than Full and Open Competition

order to match specific analytical scenarios currently provided by the AGI software applications and to provide similar functionality in direct duplication of work accomplished since 2022. It is estimated that approximately 9,443 man hours (estimate was calculated by dividing labor invoices from 2022-2025 by the average Government labor rate for each year), at an average Government labor rate of [REDACTED] would be required to recreate similar datasets generated by AGI software from 2022 to 2025. The fully burdened Government rate of [REDACTED] hour was determined by utilizing Civilian Pay rates provided by an analyst from 2022 through 2025 which were normalized and escalated by 3.4% based on the ECI rate. The labor hours for 2026-2029 were estimated for ten (10) full time engineers, two at each AFTC location, for the first year. Each year thereafter, the required full time engineer hours were reduced by 50%.

Should an OTR application be chosen in lieu of AGI software applications, the Government would incur approximately [REDACTED] (determined by summing the estimated labor costs for 2022-2025, the estimated government labor costs for 2026-2029, and AFTC's historical software cost of [REDACTED] from 2022-2025) in additional costs associated with new, peripheral software and ancillary hardware, and re-training AFTC analysts/engineers. OTR software would ultimately have a negative impact on the AFTC's ability to reduce costs and compress T&E schedules, which would decrease AFTC effectiveness and efficiency.

V. Description of efforts made to ensure that offers are solicited from as many potential sources as practicable, including whether a notice was or will be publicized as required by subpart 5.2 and, if not, which exception under FAR 5.202 applies.

A Sources Sought Synopsis (SSS) was posted to the Government-wide Point of Entry (GPE) at SAM.gov. The purpose of the SSS was to solicit capability statements from any interested parties who believe they can provide the unique combination of Ansys software licenses, comprehensive maintenance, and engineering support that is fully compatible with AFTC's legacy AGI environment, without the risks (costs, schedule and performance) associated with a transition. The notice was posted for a period of six (6) calendar days. The three vendors that submitted capability statements: [REDACTED]

[REDACTED] failed to demonstrate their ability to offer the required M&S tools, license replication and rapid deployment of classified engineering services. The response lacked sufficient detail and was therefore deemed unacceptable.

The [REDACTED] failed to demonstrate their ability to offer the variety of M&S tools, including TETK or STK model center, required to meet the requirement. The response lacked sufficient evidence that they can offer license replication and the ability to deploy classified engineering services. While they did have some experience with M&S it was individual based, not a suite of products. Therefore, [REDACTED] was found to be incapable of meeting the requirement.

[REDACTED] is a company familiar to AFTC and a good integrator of various software however, a new suite of tools would be introduced in addition to the AGI tools currently being utilized. The capability statement did not address their ability to rapidly deploy classified engineering services nor did it address the license replication and wide area network licensing required. [REDACTED] capability statement was found unacceptable.

IAW FAR 5.201 this acquisition will require a Synopsis of Contract Action (SOCA). The expected date of publication to the GPE (sam.gov) is no later than 07 October 2025 and will be posted no more than 15 days prior to the solicitation issuance.

VI. Determination by the Contracting Officer that the anticipated cost to the Government will be fair and reasonable.

The anticipated pricing may be determined fair and reasonable IAW FAR 15.404-1(b)(2)(ii), (iv) and (v). The Contracting Officer will compare the a.) proposed prices from AGI with prices paid on recent and relevant prior contracts for the same or

Justification and Approval (J&A) for Other Than Full and Open Competition

similar Ansys software licenses, maintenance, and support services; b.) proposed prices will be compared with competitive published pricelists offered by Ansys in the commercial marketplace; and, c.) proposed prices will be compared with the Independent Government Cost Estimate (IGCE) developed by SMEs within the AFTC.

VII. Description of the market research conducted and the results, or a statement of the reasons market research was not conducted.

AFTC has investigated and evaluated numerous tools and technologies for flight test data analysis, visualization, and real-time operational modification. These include:

1. **Internally Developed Tools:** This encompassed proprietary AFTC tools such as DIVA, and custom scripts developed using programming environments like Python and MATLAB.
2. **Contractor-Developed Tools:** Evaluation of specialized software developed by external contractors, including tools like IADS (Integrated Analysis and Display System), QMerge, and CMDP.
3. **Commercial Off-The-Shelf (COTS) Tools:** Investigation into various commercial software solutions, including general-purpose data analysis platforms (e.g., Virtualitics, Julia, other Python libraries) and standard office productivity suites (e.g., Excel).

Through operational testing, analysis, and direct application to AFTC's mission requirements, all of these alternative tools and technologies were found to be insufficient to meet the comprehensive breadth of existing capabilities and the requisite flexibility for modification required to address dynamic, day-of-mission needs.

Specifically, these alternatives collectively lacked:

1. **Integrated Physics-Based Simulation Fidelity:** The high-fidelity, multi-physics simulation capabilities essential for accurate flight test prediction, detailed post-test analysis, and robust weapon system design.
2. **Comprehensive Toolset Integration:** A unified environment capable of seamlessly handling diverse engineering domains (e.g., RF, EW, data links, GPS, optics, CFD) critical to AFTC's complex test missions, as opposed to disparate, non-integrated solutions.
3. **Agility for Real-Time Operational Needs:** The inherent flexibility and adaptability to rapidly modify simulations and analysis tools to support dynamic, real-time adjustments during live flight test operations, which is crucial for safety and mission success.
4. **Compatibility with Existing Data and Workflows:** The ability to seamlessly integrate with and leverage AFTC's extensive historical data, proprietary models, and established workflows without requiring costly, time-consuming, and disruptive re-engineering or data migration.

VIII. Any other facts supporting the use of Other Than Full and Open Competition.

The Ansys software licenses required for this effort are available exclusively through AGI. AGI has the sole authority to offer the licenses and they have no authorized resellers.

The proprietary nature of AGI software, interface control documentation and source code, along with AFTC's current investment, reinforce the determination that AGI is the only responsible source capable of meeting the Government's needs without significant duplication of cost and unacceptable delays.

Justification and Approval (J&A) for Other Than Full and Open Competition

IX. List of any sources that expressed, in writing, an interest in the acquisition.

Four vendors expressed, in writing, interest in the acquisition: [REDACTED] and [REDACTED]

[REDACTED] failed to demonstrate their ability to offer the required M&S tools, license replication and rapid deployment of classified engineering services. The response lacked sufficient detail and was therefore deemed unacceptable.

[REDACTED] failed to demonstrate their ability to offer the variety of M&S tools, including TETK or STK model center, required to meet the requirement. The response lacked sufficient evidence that they can offer license replication and the ability to deploy classified engineering services. While they did have some experience with M&S it was individual based, not a suit of products. Therefore, [REDACTED] was found to be incapable of meeting the requirement.

[REDACTED] is a company familiar to AFTC and a good integrator of various software however, a new suite of tools would be introduced in addition to the AGI tools currently being utilized. The capability statement did not address their ability to rapidly deploy classified engineering services nor did it address the license replication and wide area network licensing required. [REDACTED] capability statement was found unacceptable.

AGI confirmed its interest in the requirement and demonstrated its ability to provide the necessary Modeling & Simulation (M&S) tools, license replication, wide area network licensing, and the rapid deployment of classified engineering services essential to meet the Government's needs.

X. A statement of the actions, if any, the agency may take to remove or overcome any barriers to competition before any subsequent acquisitions for the supplies or services required.

AFTC will continuously surveil the commercial market to monitor advancements in the modeling, simulation, and analysis (MS&A) software industry. Engineers will assess new and maturing MS&A capabilities that could potentially meet the AFTC's requirements in the future. The AFTC will engage vendors to demonstrate their software at recurring data and digital engineering meetings. Currently, AFTC is tracking [REDACTED] all of which do not have the capabilities that meet or exceed AGI's capabilities [REDACTED]

XI. Certification by the Contracting Officer.

As evidenced by my signature above, I certify that this justification is accurate and complete to the best of my knowledge and belief.

XII. Certification by the technical/requirements personnel.

As evidenced by my our signature above, I certify that any supporting data contained herein, which is my responsibility, is both accurate and complete.
