

U.S. Space Force (USSF)
Space Systems Command (SSC)
International Affairs (IA)
Los Angeles Air Force Base, California (LAAFB, CA)

Space Domain Awareness (SDA)
Request for Information (RFI)
SSCIA-26-FMS01

A. OVERVIEW

- 1. Purpose/Context:** Space Systems Command (SSC) International Affairs (IA) has a Letter of Offer and Acceptance (LOA) with a Partner Nation (PN) including investigation of Space Domain Awareness (SDA) Command and Control (C2) capabilities. As a result, SSC/IA is conducting market research to respond to PN's request. The PN for this Request for Information (RFI) is the Canada Department of National Defence (CAN DND). International companies, including Canadian, are welcome to respond.
- 2. Non-Binding Commitment:** In accordance with FAR 15.201(e), this RFI is for market research purposes to obtain price, delivery, or capabilities for planning purposes and will not result in an award. Furthermore, there is no guarantee that this RFI will result in a solicitation. Nor should this be construed as a commitment by either the United States Government (USG) or the PN Government to issue a solicitation or ultimately award a contract. Responses will not be considered as proposals, and hence no award will be made as a result of this inquiry. All information contained in this RFI is preliminary and subject to change.

B. REQUIREMENT DETAILS

1. Background

SSC/IA seeks to identify and assess industry, allied, and academic SDA capabilities that may inform future CAN DND acquisition options.

The intent of this effort is to produce **System of Systems (SoS)** options based on the following criteria:

- **In Scope:**
 - Data ingestion and management across multiple security domains
 - Cross-domain solutions and interoperability with allied systems
 - Analytics, visualization, dashboards, collaboration tools, and mission planning applications
 - Artificial Intelligence/Machine Learning (AI/ML) for exploitation, anomaly detection, decision support, and workflow optimization
 - Resiliency measures, cybersecurity, and lifecycle sustainment
 - Capabilities including, but not limited to, observation processing, object characterization, and orbit determination and dissemination

- **Out of Scope:**
 - Telemetry, Tracking, and Command (TT&C) functions
 - Direct tasking or commanding of satellites or payloads
 - Ground station operations

2. Technical

As space becomes increasingly contested and congested, effective SDA requires an enterprise-level approach that can ingest, fuse, and share data across multiple domains and classification levels.

The envisioned SDA system is therefore not about commanding satellites directly, but rather it must:

- Access and fuse SDA data from diverse sources
- Enhance command and control at different echelons
- Ensure interoperability for space, joint, and combined operations
- Provide mission assurance and continuity of operations
- Automate processes to replace and/or augment current manual processes
- Adapt to changes within the space domain
- Account life cycle sustainment

This effort will provide the means to transform disparate data into coherent operational insight, enabling faster, evidence-based decision-making while also supporting joint and coalition commanders in contested and uncertain environments.

3. Requested Information

Vendors are invited to provide information on existing or planned solutions at **Technology Readiness Level (TRL) 6 or greater** that could support the in-scope areas listed in Section B1. We are looking for information on products that can do the following:

- Orbit Determination
- Catalog Maintenance
- Safety of Flight Applications (Conjunction Assessment, Radio Frequency Interference deconfliction)
- Force Enhancement (reentry assessment)
- Event Products
- Catalog Products

Partial responses are welcome. Responses should include cost and schedule rough order-of-magnitude (ROM) costs for licensing, integration, and sustainment, as well as typical timelines for adaptation or deployment in a government context.

C. SUBMISSION GUIDELINES

1. Format Details:

- a. Include a cover sheet with company name, address, date, Points of Contact (POC(s)) with an email address and phone number. If clarifications are necessary, the submitted POC(s) listed on the cover sheet will be contacted to schedule a virtual meeting.
- b. Responses shall not exceed thirty (30) pages.
- c. Responses will use 8.5 x 11-inch portrait format pages with single-spaced Times New Roman 12-point font with 1-inch margins. The landscape format is acceptable for charts and graphs only.
- d. Responses must be delivered as either a Portable Document Format (PDF) or Microsoft Word document.
- e. Proposals or unnecessary brochures will not be considered.

2. Security Classification:

The overall submission classification should not exceed TS/SCI/, in which case advance coordination with the USG of classified submission is required. UNCLASSIFIED responses are preferred. If a classified response is provided, information on the original classification authority is required.

3. Technical, Cost/Pricing, and Schedule Information:

All respondents are requested to provide the following:

- a. Capabilities statement addressing the requested requirements. Responses do not need to address all the requirements.
- b. Estimated cost/price to provide services/supplies.
- c. Estimated schedule to provide services/supplies.

4. Response Deadline and Transmission:

Responses are due no later than **1700 PST on ~~February~~ March 20, 2026**. Unclassified responses can be transmitted to SSC/IAF Market Research at ssc.iaf.marketresearch@spaceforce.mil.

5. Questions:

Transmit any unclassified questions to SSC/IAF Market Research at ssc.iaf.marketresearch@spaceforce.mil. Please do not submit classified information or questions to this mailbox.

D. RELATED DISCLOSURES

1. **Expenses Notice:** The USG and the PN Government do not intend to pay for information received in response to this RFI. Respondents to this invitation are solely responsible for all expenses associated with responding to this RFI.
2. **Proprietary Information:** To ensure confidentiality, please refrain from disclosing any proprietary information. Any proprietary information or trade secrets should be clearly marked as "Proprietary." All submitted materials designated as such will be handled and protected accordingly.

3. **Intended Use Statement:** This RFI is issued solely for information and planning purposes only. Similar requests are anticipated from other PNs, therefore the market research garnered from this RFI may be repurposed to respond to future LORs.
4. **Handling Statement:** All responses become USG property and will not be returned. Acknowledgement of receipt may or may not be confirmed.
5. **Notice of Non-Government Advisors:** The Government intends to use USG personnel to review the RFI responses. The Government reserves the right to use contractor personnel, including, but not limited to, SSC Federally Funded Research and Development Centers (FFRDCs) and Systems Engineering and Technical Assistance (SETA) contractors. Non-Disclosure Agreements (NDAs) will not be required as responses to this RFI will be considered an implicit acknowledgment and acceptance that non-Government advisors will be assisting the Government.

E. ACRONYMS/ ABBREVIATIONS

Acronym/ Abbreviation	Definition
AI	Artificial Intelligence
C2	Command and Control
CA	California
CAN	Canada (three-letter code)
DND	Department of National Defence
FFRDC	Federally Funded Research and Development Center
IA	International Affairs
LAAFB	Los Angeles Air Force Base
LOR	Letter of Request
ML	Machine Learning
NDA	Non-Disclosure Agreement
PDF	Portable Document Format
PN	Partner Nation
POC	Point of Contact
PST	Pacific Standard Time
RFI	Request for Information
ROM	Rough Order-of-Magnitude
SCI	Sensitive Compartmented Information

SDA	Space Domain Awareness
SETA	Systems Engineering and Technical Assistance (Contractor/Corporation)
SSC	Space Systems Command
SoS	System of systems
TRL	Technology Readiness Level
TS	Top Secret
TT&C	Telemetry, Tracking, and Command
USG	United States Government
